TERMS OF USE OF NEW MATERIALS - PLEASE READ CAREFULLY

From time to time, Novatel Wireless, in its sole discretion, may make available for download on its website (www.novatelwireless.com), or may transmit via mail or email, updates or upgrades to, or new releases of, the firmware, software or documentation for its products (collectively, 'New Materials'). Use of such New Materials is subject to the terms and conditions set forth below, and may be subject to additional terms and conditions as set forth in Novatel Wireless's Technical Support Policy (posted on its website) and/or any written agreement between the user and Novatel Wireless.

All New Materials are provided AS IS. Novatel Wireless makes no warranty or representation with respect to the merchantability, suitability, functionality, accuracy or completeness of any such New Materials. The user of such New Materials assumes all risk (known or unknown) of such use. Novatel Wireless reserves all rights in such New Materials. The user shall have only a revocable and limited license to use such New Materials in connection with the products for which they are intended. Distribution or modification of any New Materials without Novatel Wireless's consent is strictly prohibited.

IN NO EVENT WILL NOVATEL WIRELESS BE RESPONSIBLE FOR ANY INCIDENTAL, INDIRECT, CONSEQUENTIAL OR SPECIAL DAMAGES AS A RESULT OF THE USE OF ANY NEW MATERIALS. NOVATEL WIRELESS'S MAXIMUM LIABILITY FOR ANY CLAIM BASED ON THE NEW MATERIALS SHALL NOT EXCEED FIFTY U.S. DOLLARS (\$50).

Introduction

Document Scope

The following documentation pertains to the AT Command Set to be used in conjunction with the Novatel Wireless Device identified in the title of this document.

Platform Reference And Use

The device will be referred to using various terms, to include: MS (Mobile Station), TA (Terminal Adapter), DCE (Data Communication Equipment), or ME (Mobile Equipment).

The device can be controlled via the use of a DTE (Data Terminal Equipment) platform by issuing the AT commands via a serial interface.

Command Syntax

The attention or “AT” prefix is required prior to entering any command. All commands require a carriage return or <CR> following the entry of the desired command. All command responses are encapsulated by a carriage return and line feed or <CR><LF>. The ASCII display of these characters is suppressed with only the modem response being presented.

In addition to terminating AT commands, the carriage return <CR> is also used to abort commands that are executing.

Most AT commands complete immediately so there is no opportunity to abort them, for instance ATI. However, Some commands like AT+COPS or AT+CFUN can actually take several seconds to complete. The AT command interface is said to be in execution mode when a command is running and has not returned a result code (OK/ERROR). A second <CR> entered while the AT command interface is in execution mode will abort the command and return the interface to command mode.

Some AT commands require additional input, for instance AT+CMGS. After terminating the AT+CMGS command with a <CR> the AT command interface enters line edit mode. While in line edit mode all characters are accepted except CNTL-Z. CNTL-Z terminates line edit mode and the AT command interface enters execution mode. Like before, at this point another <CR> will abort the command.

AT message concatenation can be done using the ; <semicolon> between commands.

The following examples demonstrate the potential usage of AT commands presented:

Type	Example	Description
Syntax Query	AT+GXXX=?	When entered will return the command format and value ranges.
Read Syntax	AT+GXXX?	When entered will return the current value assigned to the command.
Write Syntax	AT+GXXX- X=<value>,<value>,	When entered will set the command to specified value(s).
Execute Syntax	AT+GXXX	When entered will execute the specified command.
Command Con- catenation	AT+CRC=1;S0=1	When entered it will execute both the CRC and S0 command.

Standard AT Commands

The following is the format in which all commands will be presented.

ATx(Command)	Xxxxx (Command Description)
Command Function	(Description of the command function)
Syntax Query	ATx=?
Syntax	ATx: (parameter1 name 1 - 15), (parameter2 name 1-10),...
Write Syntax	ATx=<value>,<value>[,<optional value>],...
Write Response	OK or ERROR
Read Syntax	ATx?
Read Response	<value>,<value>,...
Execute Syntax	ATx
Execute Response	OK, ERROR, or <value>
Unsolicited Response	
Parameter Values	
<Value 1>	ATx: (1-15),(1-10)
<Value 2>	
Notes	(Additional command notes)
Examples	

Where applicable, the <value> responses provided for the READ and EXECUTE formats are modem default values. All efforts will be made by Novatel Wireless. to keep these values current in the documentation but will not be responsible for any differences that may occur as a result subsequent software builds and version enhancements.

Do not use tab characters in the custom AT command scripts.

General Commands

AT\$MSPVER Query Current MSP Software Version

AT\$MSPVER	Query Current MSP Software Version
Command Function	This command allows the user to query the current software ID of the MSP430.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$MSPVER?
Read Response	\$MSPVER: version OK or ERROR
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<version>	0 -5 = version ID unknown (MSP430 has not communicated the version to the modem) 6 - 255 = version ID received from the MSP430
Notes:	N/A

AT\$NWGMR Manufacturer Revision

AT\$NWGMR	Manufacturer Revision
Command Function	This AT command displays software and hardware revision information.
Syntax Query	AT\$NWGMR=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$NWGMR
Execute Response	Chipset: <chipset> Radio: <radio_vers> Smart Agent: <smart_agent_vers> HW Rev: <hw_rev> PRI Info: <pri_pn> PRI Version: <pri_vers> OK
Unsolicited Response	N/A
Parameter Values	
<chipset>	Type of radio chipset.
<radio_vers>	Internal protocol stack software version.
<smart_agent_vers>	Smart Agent™ M2M feature set software version.
<hw_rev>	Internal 5-bit modem hardware revision.
Notes	N/A

AT\$PKG Request Firmware Package

AT\$PKG	Request Firmware Package
Command Function	This command is used to obtain the firmware package version.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$PKG
Execute Response	<baseline release>-<release offset> OK
Unsolicited Response	N/A
Parameter Values	
<baseline release>	1 to 99 - number associated with official production release
<release offset>	<p>A = Controlled Availability : The 'A' release is a prerelease of the next production release and focuses on new features. These releases are rarely placed in manufacturing for shipment and the expectation is that customers move to the production release when available.</p> <p>C = Candidate (internal only) : This label is used to differentiate releases during the system test phase. Internal Release (IR) is by definition, "C1". It's possible that a 'C' release will be sent to a customer for the same reasons as the Controlled Availability release. This release type will not be available for order from manufacturing.</p> <p>D = Maintenance : A 'D' release includes the previous production release plus very specific bug fixes (no new features). Maintenance releases can be, and usually are, released to production. Not all products will necessarily have a maintenance release. For instance, if a Nitro has a GPS issue that requires a maintenance release, the OEM modules will not have a release.</p> <p>E = Engineering (internal only) : Although these are internal releases, they can be sent to specific customers to verify either a</p>

AT\$PKG	Request Firmware Package
	bug fix or new feature. These releases cannot be used by customers as a production release. This release type will not be available for order from manufacturing.
Notes	Return value is manufacturer specific.
Examples	<p>AT\$PKG?</p> <p>48 This is a baseline production release</p> <p>AT\$PKG?</p> <p>48-D1 This is the baseline production release with additional bug fixes</p>

AT\$SPN Software Part Number

AT\$SPN	Software Part Number
Command Function	This command will return the software part number.
Syntax Query	AT\$SPN=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$SPN?
Read Response	\$SPN: SWxxx
Execute Syntax	AT\$SPN
Execute Response	\$SPN: SWxxx OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	

AT\$SRN Module Serial Number

AT\$SRN	Module Serial Number
Command Function	This command will return the serial number of the module.
Syntax Query	AT\$SRN=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$SRN
Execute Response	\$SRN: xxxxxxxxxxxxxxx
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Returned values are unique for each module

AT+CGMI Request Manufacturer Identification

AT+CGMI	Request Manufacturer Identification
Command Function	This command is used to obtain the manufacturer identification information.
Syntax Query	AT+CGMI=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CGMI
Execute Response	Novatel Wireless OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Return value is manufacturer specific.

AT+CGMM Request Manufacturer Model Identification

AT+CGMM	Request Manufacturer Model Identification
Command Function	This command is used to obtain the manufacturer model identification information.
Syntax Query	AT+CGMM=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CGMM
Execute Response	<model> OK
Unsolicited Response	N/A
Parameter Values	N/A
<model>	Text string containing the model identification information.
Notes	<model> value is manufacturer and model specific.

AT+CGMR Request Revision Identification

AT+CGMR	Request Revision Identification
Command Function	This command is used to obtain the manufacturer embedded firmware revision information.
Syntax Query	AT+CGMR=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CGMR
Execute Response	AT+CGMR Radio: <radio_vers> Smart Agent: <smart_agent_vers> OK
Unsolicited Response	N/A
Parameter Values	
<radio_vers>	Radio version
<smart_agent_vers>	Smart Agent version
Notes	Return value is manufacturer specific.

AT+CGSN Request IMEI

AT+CGSN	Request IMEI
Command Function	This command is used to obtain the manufacturer International Mobile Equipment Identity (IMEI).
Syntax Query	AT+CGSN=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CGSN
Execute Response	0044008824900101 OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Return value is manufacturer specific. The TA returns the International Mobile station Equipment Identifier (IMEI).

AT+CIMI Request IMSI

AT+CIMI	Request IMSI
Command Function	This command is used to obtain the International Mobile Subscriber Identity (IMSI) value assigned to the SIM.
Syntax Query	AT+CIMI=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CIMI
Execute Response	310260101xxxxx OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Return value is manufacturer specific. The TA returns the International Mobile Subscriber Identity (IMSI).

AT+GMI TA Manufacturer ID

AT+GMI	TA Manufacturer ID
Command Function	TA returns information about the manufacturer.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+GMI
Execute Response	Novatel Wireless OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	N/A

AT+GMM TA Model ID

AT+GMM	TA Model ID
Command Function	TA returns manufacturer model identification.
Syntax Query	AT+GMM=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+GMM
Execute Response	<model> OK
Unsolicited Response	N/A
Parameter Values	
<model>	Text string containing the model identification information.
Notes	<model> value is manufacturer and model specific.

AT+GMR TA Revision Number

AT+GMR	TA Revision Number
Command Function	Returns software revision information.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+GMR
Execute Response	Radio: <radio_vers> Smart Agent: <smart_agent_vers> OK
Unsolicited Response	N/A
Parameter Values	
<radio_vers>	The radio version
<smart_agent_vers>	The Smart Agent version
Notes	N/A

AT+GSN TA Serial Number

AT+GSN	TA Serial Number
Command Function	This command is used to obtain the manufacturer International Mobile Equipment Identity (IMEI).
Syntax Query	AT+GSN=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+GSN
Execute Response	0044008824900101 OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Return value is manufacturer specific. The TA returns the International Mobile Equipment Identity (IMEI).

AT+WS46 Select Wireless Network

AT+WS46	Select Wireless Network
Command Function	This command is used to select the wireless network to operate with the TA.
Syntax Query	AT+WS46=?
Syntax	+WS46: (12,22,25) OK
Write Syntax	AT+WS46=<n>
Write Response	OK
Read Syntax	AT+WS46?
Read Response	+WS46: <n> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<n>	12 = GSM Digital Cellular 22 = UTRAN Only 25 = 3GPP Systems
Notes	Will provide available network interface support selection.

ATI Manufacturer Information About TA

ATI	Manufacturer Information About TA
Command Function	List manufacturer.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	ATI
Execute Response	ATI Manufacturer: Novatel Wireless Model: Enabler HS 3002 Revision: 20.1.1.17 SVN 1 [May 21 2013 10:54:10] IMEI SV: 0010360002407301 OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	N/A

Accelerometer Commands

Accelerometer Introduction

If the Device requires Auto-Calibration the Accelerometer commands should only be used if issues are experienced with the accelerometer.

The optional features described in this section are not applicable to all devices. For information about which features are present for each product, please refer to the product specification sheet.

AT\$ACCAC Accelerometer Auto-Calibration

AT\$ACCAC	Accelerometer Auto-Calibration
Command Function	This command is used to set the device to auto-calibrate the x, y, and z axes for the accelerometer
Syntax Query	AT\$ACCAC=?
Syntax	\$ACCAC: (0-1) OK
Write Syntax	AT\$ACCAC =< AUTOCAL >
Write Response	OK
Read Syntax	AT\$ACCAC?
Read Response	\$ACCAC: <AUTOCAL><STATUS> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<AUTOCAL>	0 - Auto calibration off 1 - Auto calibration on
<STATUS>	0 - Initializing 1 - Getting gravity vector 2 - Gravity vector complete 3 - Getting XY vector 4 - Complete
Notes	\$ACCAC cannot be set to 1 if \$ACCMGC is set to 1. When calibrating the device using AT\$ACCAC=1, the device must get a GPS lock before proceeding with the calibration.

AT\$ACCCFG Accelerometer Configuration

AT\$ACCCFG	Accelerometer Configuration
Command Function	This command allows the user to set or query the accelerometer configuration.
Syntax Query	AT\$ACCCFG=?
Syntax	\$ACCCFG: (0-3),(0-7),(0,1,2),(0-3) OK
Write Syntax	AT\$ACCCFG=<Range>,<Bandwidth>,<Mode>,<Wakeup Pause>
Write Response	OK
Read Syntax	AT\$ACCCFG?
Read Response	\$ACCCFG: <Range>,<Bandwidth>,<Mode>,<Wakeup Pause> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<Range>	Accelerometer range: 0 = +/- 2 G (default value) 1 = +/- 4 G 2 = +/- 8 G 3 = +/- 16 G
<Bandwidth>	Accelerometer bandwidth: 0 = 7.81 Hz 1 = 15.63 Hz 2 = 31.25 Hz 3 = 62.50 Hz 4 = 125 Hz 5 = 250 Hz (default value)

AT\$ACCCFG	Accelerometer Configuration
	6 = 500 Hz 7 = 1000 Hz
<Mode>	Accelerometer mode 0 = Normal (default value) 1 = Sleep 2 = Wakeup
<Wakeup Pause>	Accelerometer wakeup pause 0 = 20 msec (default value) 1 = 80 msec 2 = 320 msec 3 = 2560 msec
Notes	<p>In order for the accelerometer to be used to aid the GPS stability, the settings for the accelerometer configuration are restricted to these values:</p> <ul style="list-style-type: none"> • <range> must be 2G • <bandwidth> must be between 3 and 4 (190 - 375 Hz) • <mode> must be 0 (normal) <p>If these restrictions are not met, the accelerometer will not be used for GPS stability, which can result in increased GPS position drift.</p>
Examples	

AT\$ACCAM Accelerometer 'Any Motion' Commands

AT\$ACCAM	Accelerometer 'Any Motion' Commands
Command Function	This command allows the user to set the 'any motion' parameters of the accelerometer. The 'any motion' setting allows users to trigger an event when the accelerometer senses motion in any axis.
Syntax Query	AT\$ACCAM=?
Syntax	\$ACCAM: (0-1),(0-255),(0-3),(0-64800) OK
Write Syntax	\$ACCAM=<enable>,<threshold>,<count>,<holdtime>
Write Response	OK
Read Syntax	AT\$ACCAM?
Read Response	\$ACCAM: <enable>,<threshold>,<count>,<holdtime> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<enable>	Disable/enable the any motion feature 0 = disable (default value) 1 = enable
<threshold>	Accelerometer 'any motion' threshold. This value represents the level of movement required to be considered 'any motion.' Lower values are more sensitive to motion. The <threshold> values are raw hardware units (<u>not</u> mili-G's). Range: 0 - 255 Default: 10

AT\$ACCAM	Accelerometer 'Any Motion' Commands
<count>	Accelerometer 'any motion' count Range: 0 -3 Default: 1
<holdtime>	Number of seconds of no motion before the 'any motion' event is cleared Range: 0 - 64800 Default: 120
Notes	By default, the any motion accelerometer is also used to determine motion for GPS filtering algorithm. If AT\$ACCAM settings are changed from default, then the accelerometer will be removed from GPS filtering function.

AT\$ACCEL Query Accelerometer Reading

AT\$ACCEL	Query Accelerometer Reading
Command Function	This command allows the user to read the accelerometer running average values.
Syntax Query	AT\$ACCEL=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$ACCEL?
Read Response	\$ACCEL: <X>,<Y>,<Z>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<X>	X axis acceleration value in milliG
<Y>	Y axis acceleration value in milliG
<Z>	Z axis acceleration value in milliG
Notes	
Examples	

AT\$ACCELC Accelerometer Event Logging Configuration

AT\$ACCELC	Accelerometer Event Logging Configuration
Command Function	This command is used to configure the accelerometer event logging feature.
Syntax Query	AT\$ACCELC=?
Syntax	\$ACCELC: (1-8), (0-8), (1-9999), (0-30), (0-30)
Write Syntax	AT\$ACCELC=<logging filter>, <trigger filter>, <magnitude threshold>, <seconds before>, <seconds after>
Write Response	OK or ERROR
Read Syntax	AT\$ACCELC?
Read Response	\$ACCELC: <logging filter>, <trigger filter>, <magnitude threshold>, <seconds before>, <seconds after>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<logging filter>	The filter # to use for logging the accelerometer data when the logging event enabled. (default 6)
<trigger filter>	The filter # to use for the magnitude trigger. If this is 0, no filters are used for magnitude triggering. If 1 - 8 is specified, that filter is re-purposed for magnitude triggering (see notes). (default 0, disabled)
<magnitude threshold>	The value for the magnitude threshold in milli-Gs (default 2000)
<seconds before>	The number of seconds prior to the trigger to save data. If this is 0, only data after the trigger is saved. (default 15)

AT\$ACCELC	Accelerometer Event Logging Configuration
<seconds after>	The number of seconds after the trigger to save data. If this is 0, only data before the trigger is saved. <seconds before> and <seconds after> can not both be zero. (default 15)
Notes	<p>When output event 154 is triggered, the accelerometer will began event logging. The event data will be logged to a file in the Flash File System (FFS) with the name "accevt_0" (the number will increment for subsequent files, up to the max of 4). A total of 5 files can be saved; if there are five files already saved, subsequent triggering of the output event will not cause any files to be written.</p> <p>The event logging input event will not be set unless orientation calibration has been completed. See \$ACCAC for information about orientation calibration.</p> <p>See App Note on Accelerometer Event Logging for more information on the accelerometer event logging.</p>
Examples	<p>AT\$ACCELC=6,6,2000,15,15</p> <p>This will use filter # 6 (see the AT\$ACCFLT command) for data logging and for the magnitude trigger. The associated AT\$EVENT for this could look like:</p> <p>AT\$EVENT= 10, 1, 154, 1, 1</p> <p>AT\$EVENT= 10 3, 154, 2, 3</p> <p>Input event 154 is the event set when accelerometer filter # 6 exceeds the threshold. Since this is filter specified for the magnitude trigger, the magnitude threshold of 2000 mG will be used instead of the threshold specified in the AT\$ACCFLT=6,... command. All other parameters for the trigger filter (coefficient, hysteresis, duration) are used in the threshold check.</p> <p>Typically the trigger filter and the logging filter will be the same.</p>

AT\$ACCFLT Accelerometer Filter Parameters

AT\$ACCFLT	Accelerometer Filter Parameters
Command Function	This command allows the user to set the accelerometer filter threshold and parameters
Syntax Query	AT\$ACCFLT=?
Syntax	\$ACCFLT: (1-8),(-2000 - -10, +10 - +2000),(1-125),(0-2000),(1-20),(1-

AT\$ACCFLT	Accelerometer Filter Parameters
	125),(0-240) OK
Write Syntax	\$ACCFLT= <filter number>,<threshold>,<duration>,<hysteresis>,<coef>, <clear duration>,<max duration> OK
Write Response	OK
Read Syntax	AT\$ACCFLT?
Read Response	\$ACCFLT: <filter number>,<threshold>,<duration>,<hysteresis>,<coef>,<clear duration>,<max duration> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<filter no>	Number of filter
<threshold>	Filter threshold (in MilliG)
<duration>	Number of samples to exceed threshold before setting filter event
<hysteresis>	Filter Hysteresis (in MilliG)
<coef>	Filter coefficient

AT\$ACCFLT	Accelerometer Filter Parameters								
<clear duration>	The number of samples below the threshold before clearing the filter event.								
<max duration>	Max number of seconds allowed before setting cleared input event for the filter denoted by <filter no>. Default value = 10								
Notes	Defaults:	1	2	3	4	5	6	7	8
	<Threshold>	250	-250	250	-250	1250	750	250	-250
	<Duration>	25	25	25	25	25	25	25	25
	<Hysteresis>	25	25	25	25	25	25	25	25
	<Coef>	10	10	10	10	10	10	10	10
	<Clear Duration>	25	25	25	25	25	25	25	25
	<Max Duration>	10	10	10	10	10	10	10	10

AT\$ACCMGC Set Query Accelerometer Orientation Auto-calibration

AT\$ACCMGC	Set Query Accelerometer orientation auto-calibration
Command Function	This command allows the user to set the accelerometer orientation auto-calibration configuration.
Syntax Query	AT\$ACCMGC=?
Syntax	\$ACCMGC: (0-1),(0-3) OK
Write Syntax	AT\$ACCMGC=<Mode>,<Cmd>
Write Response	OK
Read Syntax	AT\$ACCMGC?
Read Response	\$ACCMGC: <Mode>,<Status> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	NA
Parameter Values	
<Mode>	MagiCal mode 0 - Disabled 1 - Enabled
<Cmd>	MagiCal command 0 - No command 1 - Start static calibration 2 - Start dynamic calibration 3 - Re-init the dynamic calibration
<Status>	MagiCal status 0 - Calibration not started 1 - Static calibration in progress

AT\$ACCMGC	Set Query Accelerometer orientation auto-calibration
	2 - Static calibration completed 3 - Dynamic calibration in progress 4 - Dynamic calibration completed
Note	AT\$ACCMGC cannot be set to 1 if \$ACCAC is set to 1.
Notes	<p>Procedure for orientation calibration: Preparation: Mount the device in the vehicle. The device should be securely mounted so that it can't shift. If it does shift the orientation calibration must be re-done. Static orientation calibration: With the vehicle level and stationary, initiate the first step, with the AT cmd: AT\$ACCMGC=1,1 This will collect data for 30 seconds. The progress of the command can be checked with: AT\$ACCMGC? \$ACCMGC: 1, 1 When the 30 second cal is complete, the status will read: AT\$ACCMGC? \$ACCMGC: 1, 2 The second param of '2' indicates that the static calibration is complete. Static orientation calibration: The next step is the 'Dynamic calibration'. To do this you need 100 ft or so of straight and level space that the vehicle can be driven in. Position the vehicle at the starting point. Initiate the dynamic cal with the AT cmd: AT\$ACCMGC=1,2 This starts a two minute interval when the device monitors the acceleration. The installer should quickly and safely accelerate the vehicle in a straight line for 2-3 seconds, then brake to a halt. When the vehicle is stopped, issue this AT cmd to verify completion of the dynamic calibration: AT\$ACCMGC? \$ACCMGC: 1, 4 The second param of '4' indicates that the device was able to collect enough samples to complete the dynamic calibration. If the device responds: AT\$ACCMGC? \$ACCMGC: 1, 3 It is still waiting for the calibration acceleration threshold to be exceeded. If the device responds: AT\$ACCMGC? \$ACCMGC: 1, 2 The device has either timed out or did not receive enough samples and has gone back to the 'Static calibration complete' state. The dynamic cal was not successful and must be re-done. If the device is moved in the vehicle, both the static and dynamic calibration must be re-done. The dynamic orientation calibration may be re-done as needed without re-doing the static calibration. However, if the static calibration is re-done, the dynamic calibration must be re-done as well. The re-init command may only be give with the mode of 0. This command disables the auto calibration and clears the saved calibration data. This sets the auto calibration status to 0 (Calibration not started).</p>

AT\$ACCPUC Accelerometer Autocal Power Up Configuration

AT\$ACCPUC	Accelerometer Autocal Power Up Configuration
Command Function	Sets/queries the power up configuration.
Syntax Query	AT\$ACCPUC=?
Syntax	\$ACCPUC: (0-1) OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$ACCPUC?
Read Response	\$ACCPUC: 0
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<config>	0 = On a power up, the Autocal will be initialized and start a new calibration cycle 1 = On a power up, Autocal will re-load the previous calibration and begin using it.
Notes	On all other device resets (AT\$RESET, NETMON, etc) Autocal will re-load the previous calibration data and begin using it. If the user wants a new calibration cycle the following command sequence will force that: AT\$ACCAC=0 AT\$ACCAC=1
Examples	

AT\$ACCRC Accelerometer Autocal Recal Configuration

AT\$ACCRC	Accelerometer Autocal Recal Configuration
Command Function	This command is used to set the configurable parameters for accelerometer autocal recalibration.
Syntax Query	AT\$ACCRC=?
Syntax	\$ACCRC: (0-1),(5-120),(25-500),(1-5),(0-49),(50-250) OK
Write Syntax	AT\$ACCRC= <enable>,<stat time>,<threshold>,<votes>,<stat speed>,<move speed>
Write Response	OK
Read Syntax	AT\$ACCRC?
Read Response	\$ACCRC: <enable>,<stat time>,<threshold>,<votes>,<stat speed>,<move speed>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<enable>	0 - disable autocal recal 1 - enable autocal recal
<stat time>	Time the speed must be at or below the <stat speed> before declaring the vehicle is stationary. (seconds)
<threshold>	Acceleration offset threshold for restarting autocal (milli-Gs)
<votes>	Number of 'votes' for recal (see notes)
<stat speed>	Maximum speed for declaring the vehicle is stationary (knots * 10)

AT\$ACCRC	Accelerometer Autocal Recal Configuration
<move speed>	Minimum speed for declaring the vehicle is moving (knots * 10)
Notes	<p>Default Values:</p> <p><enable> = 1 - enable autocal recal</p> <p><stat time> = 30 seconds</p> <p><threshold> = 75 mG</p> <p><votes> = 3 (out of 5 trials)</p> <p><stat speed> = 0 (for MT 4100) or 6 (for MT 3060)</p> <p><move speed> = 100 (10.0 knots)</p> <p>Autocal recal is used to detect an offset in the accelerometer calibration. If enabled, this will automatically restart autocal to reduce the offset.</p> <p>The algorithm is:</p> <p>After autocal is complete, recal will check for</p> <ul style="list-style-type: none"> • vehicle stationary for a minimum amount of time (the 'stat time' parameter). • the accelerometer offset in the X or Y axis is above the recal threshold (the 'threshold' parameter). <p>If these conditions are met, a 'vote' for recal is cast. If the number of votes in the last 5 trials is met (the 'votes' parameter) then recal will be started.</p> <p>Before another trial is performed, the vehicle must exceed the 'move speed'. This is to prevent the device from making multiple trials at the same spot.</p>

AT\$ACCSAM Set/Query Accelerometer Sampling

AT\$ACCSAM	Set/Query Accelerometer Sampling
Command Function	This command allows the user to set the accelerometer sampling rate and filter coefficient.
Syntax Query	AT\$ACCSAM=?
Syntax	\$ACCSAM: (0-25),(1-20)
Write Syntax	AT\$ACCSAM=<sample rate>,<coef>
Write Response	OK
Read Syntax	AT\$ACCSAM?
Read Response	AT\$ACCSAM: <sample rate>,<coef> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<sample rate>	Number of samples per second to read from the accelerometer. Range: 0-25 Default: 25
<coef>	Filter coefficient Range: 1-20 Default: 10
Notes	
Examples	

AT\$AUTOCFG Accelerometer Auto-Calibration Configuration

AT\$AUTOCFG	Accelerometer Auto-Calibration Configuration
Command Function	This command is used to set configuration parameters that are used in the auto calibration procedure for the accelerometer.
Syntax Query	AT\$AUTOCFG=?
Syntax	\$AUTOCFG: (5-30), (25-100), (100-1000), (10-250), (0-1), (5-40), (5-50) OK
Write Syntax	AT\$ AUTOCFG =< Z Cal Time >,< MinSamples >,<Thresh>,<Hysteresis >,< Direction >,<Speed Thresh>, <Lat Acc Thresh>
Write Response	OK
Read Syntax	AT\$ AUTOCFG?
Read Response	\$ AUTOCFG: <THRHLD><SET TIME><CLR TIME> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<Z Cal Time>	Time in seconds used to calibrate the Z-Axis while not moving
<MinSamples>	Minimum number of samples required for Dynamic calibration
<Thresh>	Minimum number of samples required for Dynamic calibration
<Hysteresis>	Hysteresis for G threshold for Dynamic calibration (mG)
<Direction>	Direction for Dynamic calibration 0 - acceleration (positive acceleration) of device used for dynamic calibration 1 - braking (negative acceleration) of device used for dynamic calibration
<Speed Thresh>	Minimum Speed threshold for Dynamic calibration (units of knots)

AT\$AUTOCFG	Accelerometer Auto-Calibration Configuration
<Lat AccThresh>	Lateral G threshold for Dynamic calibration (units of mG)
Notes	Parameters 1, 4, and 5 are not used in the following products: RTT2201, UMT2201, GSM2398, and UMT2221.
Examples	

AT\$MGCCFG Accelerometer MagiCal Configuration

AT\$MGCCFG	Accelerometer MagiCal Configuration
Command Function	This command allows the user to set or query the accelerometer orientation auto-calibration configuration.
Syntax Query	AT\$MGCCFG=?
Syntax	\$MGCCFG: (30-600),(10-60),(100-1000),(10-250),(0-1) OK
Write Syntax	AT\$MGCCFG=<Timeout>,<MinSamples>,<Thresh>,<Hysteresis>,<Direction>
Write Response	OK
Read Syntax	AT\$MGCCFG?
Read Response	\$MGCCFG: <Timeout>,<MinSamples>,<Thresh>,<Hysteresis>,<Direction> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<Timeout>	Seconds for Dynamic calibration timeout Range: 30-600 Default: 120
<MinSamples>	Minimum number of samples required for Dynamic calibration Range: 10-60 Default: 20
<Thresh>	G threshold for Dynamic calibration (units of mG) Range: 100-1000 Default: 250
<Hysteresis>	Hysteresis for G threshold for Dynamic calibration (mG)

AT\$MGCCFG	Accelerometer MagiCal Configuration
	Range: 10-250 Default: 20
<Direction>	Direction for Dynamic calibration 0 = acceleration (positive acceleration) of device used for dynamic calibration 1 = braking (negative acceleration) of device used for dynamic calibration Default: 0
Notes	

AT\$MOTTRANS Motion Transition Count

AT\$MOTTRANS	Motion Transition Count
Command Function	This command allows the user to set/query the motion transition count used to declare an intermediate “transition” state between the “moving” and “stopped” states. For example, this might be used to inhibit the immediate transition from moving to stopped when a vehicle is waiting at a red light. If transition count = 0, then the “transition” state is completely bypassed.
Syntax Query	AT\$MOTTRANS=?
Syntax	\$MOTTRANS: (0-65535),(0-65535) OK
Write Syntax	AT\$MOTTRANS=<clr_time>,<set_time>
Write Response	OK
Read Syntax	AT\$MOTTRANS?
Read Response	\$MOTTRANS: <clr_time>,<set_time>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<clr_time>	Debounce time (in seconds) before declaring transition to “stopped” state for the purpose of waking the modem out of Low Power Mode.
<set_time>	Debounce time (in seconds) before declaring transition to “moving” state for the purpose of waking the modem out of Low Power Mode.
Notes	<p>The motion sensor detects movement using a 3-axis accelerometer. The sensitivity of the motion sensor is set using the AT\$MOTSEN command.</p> <p>These settings are only used in Low Power Mode. When the modem is active, the software modifies the motion sensor behavior for use in GPS filtering.</p>

META Commands

AT\$PWRMSG Power On Message

AT\$PWRMSG	Power On Message
Command Function	This command allows the user to change the default Power up message.
Syntax Query	AT\$PWRMSG=?
Syntax	\$PWRMSG: "pwr up msg"
Write Syntax	AT\$PWRMSG="new pwr up message"
Write Response	OK
Read Syntax	AT\$PWRMSG?
Read Response	\$PWRMSG: "AT-Command Interpreter ready"
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<message>	New Power up Message

AT\$PWRMSG	Power On Message
<0,1>	Optional parameter that will remove the message altogether. Please see the examples at the end of this command.
Notes	AT\$PWRMSG="" will restore the power up message to the factory default. The power up message can be a maximum of 40 characters.
Example	<p>AT\$PWRMSG? \$PWRMSG: "AT-Command Interpreter ready" AT\$RESET AT-Command Interpreter ready AT\$PWRMSG ="Ready To Go" AT\$PWRMSG? \$PWRMSG: "Ready To Go" AT\$RESET Ready To Go AT\$PWRMSG ="" AT\$PWRMSG? \$PWRMSG: "AT-Command Interpreter ready"</p> <p>The second parameter is optional. AT\$PWRMSG="New Powerup Msg" sets 'New Powerup Msg' as powerup msg AT\$PWRMSG="New Powerup Msg",0 same as previous AT\$PWRMSG=,1 removes the powerup msg AT\$PWRMSG="some text",1 removes the powerup msg (ignores text) AT\$PWRMSG="" sets powerup msg back to default string AT\$PWRMSG="",0 same as previous</p>

AT\$RESET Reset Modem

AT\$RESET	Reset Modem
Command Function	This command is used to perform a modem reset.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$RESET
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Execution of this command will perform a full reset of the software stack. If the modem is currently registered onto the network, the modem will perform a detach before performing the stack reset.

AT\$URTWTO UART Wakeup Timeout

AT\$URTWTO	UART Wakeup Timeout
Command Function	This sets the number of seconds the UART will prevent the modem from going to deep sleep after it receives a character.
Syntax Query	AT\$URTWTO=?
Syntax	\$URTWTO: (0-60) OK
Write Syntax	AT\$URTWTO=<seconds>
Write Response	OK
Read Syntax	AT\$URTWTO?
Read Response	\$URTWTO: 10 OK
Execute Syntax Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<seconds>	0 - Sets the UART Wakeup time to the default value of 10 seconds. 1-60 - Sets the UART Wakeup time to the specified number of seconds.
Notes:	N/A

AT\$V Display Smart Agent Configuration Settings

AT\$V	Display Smart Agent Configuration Settings
Command Function	This command allows the user to view the Smart Agent configuration settings. The settings for a single subsystem or for the entire Smart Agent application may be displayed.
Syntax Query	AT\$V=?
Syntax	(ALL, SYS, DATA, EVENT, IO, VOICE[, GFMI][, GPS][, OBD][, UAPP]) OK
Write Syntax	AT\$V=<subsystem>
Write Response	<subsystem configuration values> OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$V
Execute Response	<configuration values for all subsystems> OK
Unsolicited Response	N/A
Parameter Values	
<subsystem>	Select a single subsystem to limit the response or select "ALL" to view the entire Smart Agent configuration. Select one of the following subsystem values: ALL, SYS, DATA, EVENT, IO, VOICE, GFMI, GPS, UAPP.
Notes	Some subsystems do not apply to all products. i.e. some products do not support Voice, GFMI and/or GPS.

AT&C DCD Usage

AT&C	DCD Usage
Command Function	Controls the Data Carrier Detect signal.
Syntax Query	N/A
Syntax	N/A
Write Syntax	AT&C<value>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<value>	0 = DCD always on 1 = DCD matches the state of the remote modem's data carrier
Notes	Some Novatel Wireless products have no DCD hardware line. The parameter for this command is persistent via AT&W.

AT&D DTR Usage

AT&D	DTR Usage
Command Function	This command controls the Data Terminal Ready signal.
Syntax Query	N/A
Syntax	N/A
Write Syntax	AT&D<value>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<value>	<p>0 = Ignore DTR</p> <p>1 = Modem switches from DATA to COMMAND mode when DTR switches to off</p> <p>2 = When DTR switches to off, disconnect the call. Automatic answer CSD call is disabled while DTR remains off"</p>
Notes	<p>Some Novatel Wireless products have no DTR hardware line.</p> <p>The parameter for this command is persistent via AT&W.</p> <p>When AT\$PADDISC=1 is set and when the DTR signal is asserted an AT&D2 setting will act as if AT&D1 is set instead. You will get an OK and be in command mode. The device will maintain the data connection and ATO can be used to get back to the PAD data connection.</p>

AT&F Set All TA Parameters To Factory Defined Configuration

AT&F	Set All TA Parameters to Factory Defined Configuration
Command Function	Set All TA Parameters to Factory Defined Configuration
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT&F
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	

For devices that support the AT\$CMDPORT command: AT\$CMDPORT is not effected by AT&F. Check AT\$CMDPORT after running AT&F

AT&V Display Current Profile

AT&V	Display Current Profile
Command Function	This command allows the user to view the settings in the current profile.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT&V
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	N/A

AT&W Save Current Settings

AT&W	Save Current Settings
Command Function	This command allows the user to save the current settings in memory.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT&W
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	<p>To ensure successful completion of the command, do not issue additional commands until 'OK' is returned.</p> <p>In general, most AT command settings that begin with '+' are not saved with AT&W. Most AT command settings that begin with '\$' are saved with AT&W</p>

Users should avoid sending AT&W immediately before a modem reset. A minimum of a few seconds should be allowed between issuing the command and a modem reset.

AT+CEER Extended Error Reporting

AT+CEER	Extended Error Reporting
Command Function	This command is used to control the display of extended result codes for last unsuccessful call setup, in-call modification, last call release, last short message, or last network data session.
Syntax Query	AT+CEER=?
Syntax	Error
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT+CEER?
Read Response	+CEER: <description>
Execute Syntax	AT+CEER
Execute Response	+CEER: <description> OK
Unsolicited Response	N/A
Parameter Values	
<description>	See the error codes listed in Appendix B
Notes	N/A

AT+CFUN Set Phone Functionality

AT+CFUN	Set Phone Functionality
Command Function	Set command selects the level of functionality <fun> in the ME. Level "full functionality" is where the highest level of power is drawn. "Minimum functionality" is where minimum power is drawn.
Syntax Query	AT+CFUN=?
Syntax	+CFUN: (0,1,4), (0) OK
Response (If HS 1000)	+CFUN: (0,1,2,3,4), (0,1) OK
Write Syntax	AT+CFUN=<fun>,<rst>
Write Response	OK
Read Syntax	AT+CFUN?
Read Response	+CFUN: 1 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<fun>	0 = minimum functionality 1 = full functionality 2 = disable phone transmit RF circuits only (HS 1000 Only) 3 = disable phone receive RF circuits only (HS 1000 Only) 4 = disable phone both transmit and receive RF circuits
<rst>	0 = Do not reset ME
Notes	Once the modem has left the minimum functionality state, it will respond to AT+CFUN? with +CFUN: 1 regardless of whether the modem has reached full functionality yet. (Not applicable to HS 1000)

AT+CMEE Report Mobile Equipment Errors

AT+CMEE	Report Mobile Equipment Errors
Command Function	Set command disables or enables the use of result code +CME ERROR: <err> as an indication of an error relating to the functionality of the ME. When enabled, ME related errors cause +CME ERROR: <err> final result codes to be returned, instead of the default ERROR final result code. ERROR is returned normally when error is related to syntax, invalid parameters, or TA functionality.
Syntax Query	AT+CMEE=?
Syntax	+CMEE: (0-2) OK
Write Syntax	AT+CMEE=<n>
Write Response	OK
Read Syntax	AT+CMEE?
Read Response	+CMEE: 0 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<n>	0 = Disable +CME ERROR 1 = Enable +CME result code and username values 2 = Enable +CME result code and ME verbose values
Notes	

AT+CSCS Select TE Character Set

AT+CSCS	Select TE Character Set
Command Function	This command is used to select the terminal equipment character set.
Syntax Query	AT+CSCS=?
Syntax	+CSCS: "IRA", "GSM", "UCS2" OK
Write Syntax	AT+CSCS=<chset>
Write Response	OK
Read Syntax	AT+CSCS?
Read Response	+CSCS: "UCS2" OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<chset>	"IRA" "GSM" "UCS2"
Notes	Values are based on character set support.

AT+CSTA Select Type Of Address

AT+CSTA	Select Type of Address
Command Function	This command is used to select the type of number to be used for further dialing commands.
Syntax Query	AT+CSTA=?
Syntax	+CSTA: (129,145) OK
Write Syntax	AT+CSTA=<n>
Write Response	OK
Read Syntax	AT+CSTA?
Read Response	+CSTA: 129 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<n>	129 - Dialing string without International Access Code character "+" 145 - Dialing string with International Access Code character "+"
Notes	N/A

AT+GCAP Request Overall Capabilities For TA

AT+GCAP	Request Overall Capabilities for TA
Command Function	TA returns a list of additional capabilities
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+GCAP
Execute Response	+GCAP: +CIS707-A, +MS, +ES, +DS, +FCLASS OK
Response (if HS 1000)	+GCAP: +CGSM OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	N/A

AT+ICF TE-TA Character Framing

AT+ICF	TE-TA Character Framing
Command Function	This command determines the number of data/stop/parity bits that will be used by the TA serial interface.
Syntax Query	AT+ICF=?
Syntax	+ICF: (3), (0-3) OK
Write Syntax	AT+ICF=<format>,<parity>
Write Response	OK
Read Syntax	AT+ICF?
Read Response	+ICF: 3,3 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<format>	3 = 8 data, 1 stop, no parity
<parity>	0 = odd 1 = even 2 = mark 3 = space
Notes	If no parity is specified in <format>, then <parity> is ignored.

AT+IFC TE-TA Local Flow Control

AT+IFC	TE-TA Local Flow Control
Command Function	This command determines the TE/TA flow control interface.
Syntax Query	AT+IFC=?
Syntax	+IFC: (0-3), (0-2) OK
Write Syntax	AT+IFC=<DCE_by_DTE>,<DTE_by_DCE>
Write Response	OK
Read Syntax	AT+IFC?
Read Response	+IFC: 0,0 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	

AT+IFC	TE-TA Local Flow Control
<DCE_by_DTE>	<p>0 = Flow control off</p> <p>1 = XON/XOFF software flow control and strip the XON/XOFF characters from the data stream</p> <p>2 = hardware flow control</p> <p>3 = XON/XOFF software flow control and leave the XON/XOFF characters in the data stream.</p>
<DTE_by_DCE>	<p>0 = Flow control off</p> <p>1 = XON/XOFF software flow control and strip the XON/XOFF characters from the data stream</p> <p>2 = hardware flow control</p>
Notes	<p>Products may support UARTs and or USB ports. Please refer to the applicable User Guide to determine what ports your device supports.</p> <p>The UART1 serial port supports hardware flow control. The UART1 serial port accepts the full range of allowed parameters.</p> <p>The UART2 serial port does not support hardware flow control. Only the value 0,0 is accepted on the write command for the UART2 serial port. Other settings return ERROR.</p>

AT+IPR Fixed TE-TA Data Rate

AT+IPR	Fixed TE-TA Data Rate
Command Function	Determines the data rate of the TA serial interface.
Syntax Query	AT+IPR=?
Syntax	+IPR: (), (300,600,1200,2400,4800,9600,19200,38400,57600,115200,230400) OK
Write Syntax	AT+IPR=<rate>
Write Response	OK
Read Syntax	AT+IPR?
Read Response	+IPR: <rate> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<rate>	(300,600,1200,2400,4800,9600,19200,38400,57600,115200,230400)
Notes	<p>Autobaud is not supported.</p> <p>After requesting a baud rate change, the modem will output the response "OK" at the original baud rate. The serial port will be closed for a short time (about a second) and re-opened at the new baud rate. Any AT commands which are sent during this serial port configuration change may be lost, therefore it is recommended to wait one second after the modem returns "OK" before sending any additional AT commands to the modem.</p>

ATE Command Echo Mode

ATE	Command Echo Mode
Command Function	Determines whether the TA echoes characters typed locally.
Syntax Query	N/A
Syntax	N/A
Write Syntax	ATE<value>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<value>	0 = Do not echo characters locally 1 = Echo characters locally
Notes	ATE1 cannot be saved using AT&W

ATQ Result Code Suppression

ATQ	Result Code Suppression
Command Function	Determines whether or not the TA transmits any result code to the TE.
Syntax Query	N/A
Syntax	N/A
Write Syntax	ATQ<value>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<value>	0 =DCE transmits result codes 1 =Result codes are suppressed and not transmitted
Notes	The parameter for this command is persistent via AT&W.

ATS3 Command Line Termination Character

ATS3	Command Line Termination Character
Command Function	Determines the character recognized by the TA to terminate an incoming command line.
Syntax Query	N/A
Syntax	N/A
Write Syntax	ATS3=<n>
Write Response	OK
Read Syntax	ATS3?
Read Response	013 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
Notes	The parameter for this command is persistent via AT&W.

ATS4 Response Formatting Character

ATS4	Response Formatting Character
Command Function	Determines the character generated by the TA for result code and information text.
Syntax Query	N/A
Syntax	N/A
Write Syntax	ATS4=<n>
Write Response	OK
Read Syntax	ATS4?
Read Response	010 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
Notes	The parameter for this command is persistent via AT&W.

ATS5 Editing Character

ATS5	Editing Character
Command Function	Determines the character recognized by the TA as a request to delete the preceding character form the command line.
Syntax Query	N/A
Syntax	N/A
Write Syntax	ATS5=<n>
Write Response	OK
Read Syntax	ATS5?
Read Response	008 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
Notes	The parameter for this command is persistent via AT&W.

ATV Response Format

ATV	Response Format
Command Function	Determines the DCE response format, with or without header character, and the use of numerical results code.
Syntax Query	N/A
Syntax	N/A
Write Syntax	ATV<value>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<value>	0 = DCE transmits limited headers and trailers and numeric result codes 1 = DCE transmits full headers and trailers and verbose response text
Notes	N/A

ATX CONNECT Result

ATX	CONNECT Result
Command Function	Determines whether or not the TA transmits particular result codes.
Syntax Query	N/A
Syntax	N/A
Write Syntax	ATX<value>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<value>	0 = Short result code format 1 = Long result code format
Notes	For UDP and TCP PAD operation, setting of ATX1 will display the network assigned IP after the CONNECT or LISTEN message.

Call Control Commands

+++ Escape Sequence

+++	Escape Sequence
Command Function	This command allows a user to escape out of data mode to command mode in a PAD data session.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	+++
Execute Response	OK or no carrier
Unsolicited Response	NA
Parameter Values	N/A
Notes	The escape sequence requires a guard period of 1 second before and after entering +++. Otherwise the +++ will be considered data and forwarded as data. To return to data mode issue ATO command.

AT\$ESCMSG Escape To AT Command Mode

AT\$ESCMSG	Escape to AT command mode
Command Function	This command allows a user to escape out of data mode to command mode in a PAD data session.
Syntax Query	AT\$ESCMSG=?
Syntax	\$ESCMSG: "escape to AT command mode message"
Write Syntax	AT\$ESCMSG=<msg>
Write Response	OK
Read Syntax	AT\$ESCMSG?
Read Response	\$ESCMSG: <msg> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<msg>	Escape mode message, input by the user in the write command.
Notes	This command allows the user to add an unsolicited response message which is output to the serial port whenever the modem detects the "+++" escape sequence to switch out of data mode into AT command mode. The default escape message is the NULL string so that no extra message is output. Any status information such as "OK", "NO CARRIER", or "CONNECT" will still be output. The escape message string will be output first followed by whatever unsolicited status information is appropriate. The user may enter AT\$ESCMSG="" to eliminate the escape message string output.

ATD Dial Command

ATD	Dial command
Command Function	This command is used to setup a data call or PAD session.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	ATD#777;
Execute Response	Connect or NO CARRIER
Unsolicited Response	N/A
Parameter Values	
<n>	V.25ter Dialing Digits = 0 - 9, *, #, +, A, B, C V.25ter Dialing Modifiers = , (comma), T, P, !, @, W
Notes	Modem Responses: NO CARRIER - if call cannot be set up CONNECT - when connected in a non-voice call (data mode)

ATH Hook Control

ATH	Hook Control
Command Function	Disconnect an existing PAD session.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	ATH
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	If data call or session is active, +++ (escape sequence) must be entered to go to command mode prior to sending ATH command. User must set AT+CVHU=0 to enable ATH to hang up a voice call.

ATO Return To Data State

ATO	Return to Data State
Command Function	This command issued to return to online mode from command mode when a PAD data call is active.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	ATO
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	N/A

IP Router Commands

AT\$FLFILT Filter ICMP Echo Request

AT\$FLFILT	Filter ICMP Echo Request
Command Function	This command allows the user to filter the ICMP echo request based against the Friends list
Syntax Query	AT\$FLFILT=?
Syntax	\$FLFILT: (0-1) OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$FLFILT?
Read Response	\$FLFILT: <enable> OK
Execute Syntax	AT\$FLFILT=<enable>
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	
<enable>	0 = do not filter ICMP echo requests 1 = filter ICMP echo requests against Friends List ** Default value is 1
Notes	Friends list entries are used without regard to the setting of the server bit. This function will also filter ICMP Echo requests when in Dial-Up Networking Mode (\$HOSTIF=0)

AT\$HOSTIF Configure Host To Modem Interface

AT\$HOSTIF	Configure Host to Modem Interface
Command Function	This command allows the user to configure the desired Host to Modem interface. This parameter determines the behavior of the ATD command.
Syntax Query	AT\$HOSTIF=?
Syntax	\$HOSTIF: (0-2) OK
Write Syntax	AT\$HOSTIF=<host interface>
Write Response	OK
Read Syntax	AT\$HOSTIF=?
Read Response	HOSTIF: <host interface>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<host interface>	<p>0 = Establish normal external Dial up networking modem to network connection.</p> <p>1 = Establish UDP PAD session. Upon establishment of a network activation, a CONNECT message will be displayed. "No Carrier" or error will indicate failed or terminated UDP PAD session.</p> <p>2 = Establish TCP PAD session Upon establishment of a network activation, a CONNECT message for at\$active=1, or a LISTEN message for at\$active=0 will be displayed. "No Carrier" or error will indicate failed or terminated TCP PAD session.</p>
Notes	.

AT\$NETIP Display Network Assigned IP & DNS

AT\$NETIP	Display Network Assigned IP & DNS
Command Function	This command allows the user to query the modem's network assigned IP.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$NETIP?
Read Response	<"IP">,<"DNS1">,<"DNS2">
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<IP>	network assigned IP
<DNS1>	network assigned DNS1
<DNS2>	network assigned DNS2
Notes	N/A

AT\$PING Send ICMP Echo Request

AT\$PING	Send ICMP Echo Request
Command Function	This command allows the user to send an ICMP echo request and display the echo reply (ping).
Syntax Query	AT\$PING=?
Syntax	\$PING: "host",(1-5),(1-10) OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$PING=<"host">,<count>,<timeout>
Execute Response	Immediate response: "Pinging <IP address>" After ICMP response: "Reply from <IP address>"
Unsolicited Response	N/A
Parameter Values	
<"host">	FQDN or IP address
<count>	Number of ICMP frames to send Range: 1-5 Default: 1
<timeout>	Maximum amount of time, in seconds, to wait for a response. Range: 1-10 Default: 5
Notes	The modem must have an IP address assigned to it by the network to send or receive ICMP packets.

GPIO Commands

AT\$BTNCFG Driver ID White List Configuration

AT\$BTNCFG	Driver ID White List Configuration
Command Function	This command allows the user to enable a white list for driver IDs.
Syntax Query	AT\$BTNCFG=?
Syntax	\$BTNCFG (0-1),(0-3600) OK
Write Syntax	AT\$BTNCFG=<dev enable>,<timeout>
Write Response	OK
Read Syntax	AT\$BTNCFG?
Read Response	\$BTNCFG:<dev enable>,<timeout>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<dev enable>	Enable use of white list
<timeout>	Timeout value before setting input event 55 to -1 after matching driver ID in white list
Notes:	

AT\$BTNLST Driver ID White List

AT\$BTNLST	Driver ID White List
Command Function	This command allows the user to enter an entry to the white list for driver IDs.
Syntax Query	AT\$BTNLST=?
Syntax	\$BTNCFG (0-150),("id")
Write Syntax	AT\$BTNLST=<index>,<id>
Write Response	OK
Read Syntax	ATBTNLST?
Read Response	\$BTNLST:<index>,<id>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<index>	List index for ID entered into white list
<"id">	iButton ID to be added to the white list
Notes:	

AT\$IBTN IButton Driver ID

AT\$IBTN	iButton Driver ID
Command Function	The \$IBTN command specifies provides access control for the features related to the iButton.
Syntax Query	AT\$IBTN=?
Syntax	\$IBTN: (0-1),(0),(0-255)
Write Syntax	AT\$IBTN=<sticky>,<clear>,<debounce>
Write Response	OK
Read Syntax	AT\$IBTN?
Read Response	\$IBTN: <sticky>,<crc>,<sernum>,<family>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<sticky>	1 = iButton data is saved to flash when it is received (default) 0 = iButton data is not saved to flash when it is received
<clear>	1 = clear iButton data from memory and flash now 0 = no not clear iButton data (default)
<crc>	8-bit iButton CRC code displayed in ASCII HEX
<sernum>	48-bit iButton serial number displayed in ASCII HEX
<family>	8-bit iButton family code displayed in ASCII HEX
<debounce>	
Notes:	

AT\$IGNDBNC Ignition Debounce

AT\$IGNDBNC	Ignition Debounce
Command Function	This command allows the user to set ignition debounce time used for the event engine. The ignition line has to be valid for the specified amount of time before the event: GPIO-8 in the event engine will be triggered.
Syntax Query	AT\$IGNDBNC=?
Syntax	\$IGNDBNC: (1-4) OK
Write Syntax	AT\$IGNDBNC=<debounceTimeout>
Write Response	OK
Read Syntax	AT\$IGNDBNC?
Read Response	\$IGNDBNC: 0
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<delay>	1 - 4 seconds. This field specifies the debounce timeout value.
Notes:	The "reset upon ignition" reset interval will follow the setting of AT\$IGNDBNC. \$IODBNC is affected by this command. Changes made affect GPIO8 in \$IGNDBNC? writes made by \$IGNDBNC will be seen by \$IODBNC?

AT\$IOADC# Read Analog To Digital Converter

AT\$IOADC#	Read Analog to Digital Converter
Command Function	This command returns the raw, uncalibrated, ADC value of the ADCIN signal. The number of supported IOs varies by device. The command format is AT\$IOADC# (where # represents the specified I/O - When using this command, replace "#" with the actual number.)
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$IOADC#
Execute Response	\$IOADC#: <value> OK
Unsolicited Response	N/A
Parameter Values	
<value>	Raw ADC value in decimal format. Range is 0 to 1023.
Notes	<p>ADC1 Range: 0-16V ADC2 Range: 0-32V Resolution 10 bit ADC1 is 0.0156 V per bit ADC2 is 0.0312 V per bit Resistor divider is +/-1%.</p> <p>+/-2 LSB therefore if precision is needed, Novatel Wireless recommends that you calibrate to a known voltage. There will still be some drift with temperature and there may be drift over time so recalibration is also recommended in applications that require precision.</p>

AT\$IIOBNC Debounce Specified GPIO For The Specified Amount Of Time

AT\$IIOBNC	Debounce specified GPIO for the specified amount of time
Command Function	This command allows a user to set and query GPIO debounce time. The GPIO must be unchanged for the specified number of seconds before the input event will be triggered.
Syntax Query	AT\$IIOBNC=?
Syntax	\$IIOBNC: (1-12),(0-60) OK
Write Syntax	AT\$IIOBNC=<gpio_number>,<debounce_timeout>
Write Response	OK
Read Syntax	AT\$IIOBNC?
Read Response	\$IIOBNC: <gpio1>,<gpio2>,<gpio3>,<gpio4>,<gpio5>,<gpio6>,<gpio7>,<gpio8>,<gpio9>,<gpio10>,<gpio11>,<gpio12> OK
Execute Syntax	AT\$IIOBNC
Execute Response	ERROR
Unsolicited Response	N/A
Parameter Values	
<gpio_number>	Number of GPIO whose debounce timeout is being set.
<debounce_timeout>	Number of consecutive seconds <gpio_number> must remain unchanged before its input event will be triggered.
<gpio1>	Debounce timeout for GPIO1.
<gpio2>	Ignored. GPIO2 is an output only. This placeholder is maintained for backwards compatibility with previous products.
<gpio3>	Ignored. GPIO3 is an output only. This placeholder is maintained for backwards compatibility with previous products.
<gpio4>	Debounce timeout for GPIO4 (transition between external power and internal battery operation).

AT\$IODBNC	Debounce specified GPIO for the specified amount of time
<gpio5>	Ignored. GPIO5 is an output only. This placeholder is maintained for backwards compatibility with previous products.
<gpio6>	Ignored. GPIO6 is an output only. This placeholder is maintained for backwards compatibility with previous products.
<gpio7>	Ignored. GPIO7 is an output only. This placeholder is maintained for backwards compatibility with previous products.
<gpio8>	Debounce timeout for GPIO8 (ignition sense). Minimum value allowed for this GPIO is 1 second. If zero is entered, value will be adjusted up to 1 second.
<gpio9>	Debounce timeout for GPIO9.
<gpio10>	Debounce timeout for GPIO10.
<gpio11>	Debounce timeout for GPIO11.
<gpio12>	Debounce timeout for GPIO12.
Notes	<p>If <debounce_timeout> is set to zero, <gpio_number> will not be debounced.</p> <p>\$IGNDBNC is affected by this command. Changes made to GPIO8 will be seen via \$IGNDBNC? Writes made by \$IGNDBNC will be seen by \$IODBNC?</p>

AT\$IOGP(x) GPIO Bit Control

AT\$IOGP(x)	GPIO Bit Control
Command Function	This command allows the user to set the state of the specified GPIO bit. The GPIO being written to must have previously been set to an output. (See AT\$IOCFG).
Syntax Query	AT\$IOGP(x)=?
Syntax	\$IOGP(x): (0-1) OK
Write Syntax	AT\$IOGP(x)=<mode>
Write Response	OK
Read Syntax	AT\$IOGP(x)?
Read Response	\$IOGP(x): <current setting>, <configured setting> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
(x)	1-12 GPIO bit
<mode>	0 = off 1 = on
Notes	Attempting to use the Write Syntax (AT\$IOGP(x)=<mode>) for a GPIO input line will return ERROR.
Example:	<p>Output format for read command</p> <pre> AT\$IOGP2? \$IOGP2: 1,0 OK </pre> <p>Output pin was configured off Output pin is currently on</p>

AT\$IOGPA GPIO Byte Control

AT\$IOGPA	GPIO Byte Control
Command Function	This command allows the user to set the state of all GPIO bits simultaneously. Only GPIO pins previously configured as outputs will be effected. (See AT\$IOCFG)
Syntax Query	AT\$IOGPA=?
Syntax	\$IOGPA: (000000000000-1111111111) OK
Write Syntax	AT\$IOGPA=<mode>
Write Response	OK
Read Syntax	AT\$IOGPA?
Read Response	\$IOGPA: <current setting> <configured setting> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<mode>	12 digits where left bit represents GPIO1 and right most bit represents GPIO12. Attempting to set input GPIO bits will be ignored. 0 = off 1 = on
Notes	
Example	Output format for read command at\$iogpa? \$IOGPA: 100101111100 000000000000

AT\$IOPULUP GPIO Pull-up Settings

AT\$IOPULUP	GPIO Pull-up Settings
Command Function	This command allows the user to set the GPIO pullup state on GPIO 1, 9, 10, 11 and GPIO12.
Syntax Query	AT\$IOPULUP=?
Syntax	\$IOPULUP: (0-2),(0-2),(0-2),(0-2),(0-2) OK
Write Syntax	AT\$IOPULUP =<pullup_state_GPIO1>,<pullup_state_GPIO9>,<pullup_state_GPIO10>,<pullup_state_GPIO11>,<pullup_state_GPIO12>
Write Response	OK
Read Syntax	AT\$IOPULUP?
Read Response	\$IOPULUP: <GPIO1>, <GPIO9>, <GPIO10>, <GPIO11>, <GPIO12> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<pullup_state_GPIO1>	0 = pulldown. 1 = pullup. 2 = programmable pullup/pulldown feature disabled
<pullup_state_GPIO9>	0 = pulldown. 1 = pullup. 2 = programmable pullup/pulldown feature disabled
<pullup_state_GPIO10>	0 = pulldown. 1 = pullup. 2 = programmable pullup/pulldown feature disabled

AT\$IOPULUP	GPIO Pull-up Settings
<pullup_state_GPIO11>	0 = pulldown. 1 = pullup. 2 = programmable pullup/pulldown feature disabled
<pullup_state_GPIO12>	0 = pulldown. 1 = pullup. 2 = programmable pullup/pulldown feature disabled
Notes	N/A

AT\$IOTAR Input/Output Transition Across Reset

AT\$IOTAR	Input/Output Transition Across Reset
Command Function	<p>Ability to detect GPIO transition that occurs during a modem reset</p> <p>This command allows the user to set/query the flags that control how the event engine's input GPIO events are initialized.</p> <p>By default, the modem initializes the GPIO input events to the value detected in the hardware when the code is initialized. So the first pass through the event engine logic generally does not trigger a transition event (see \$EVENT).</p> <p>Setting the appropriate flag with this command allows the code to initialize the GPIO input event with the last value saved to flash prior to the modem reset. Using this method allows the modem to generate a transition event, if the GPIO has changed state while the modem was resetting.</p>
Syntax Query	AT\$IOTAR=?
Syntax	\$IOTAR: (0000000000000-11111111111) OK
Write Syntax	AT\$IOTAR=<iotar_config>
Write Response	OK
Read Syntax	AT\$IOTAR?
Read Response	\$IOTAR: <iotar_config>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	

AT\$IOTAR	Input/Output Transition Across Reset
<iotar_config>	12 digits where left most bit represents GPIO1 and right most bit represents GPIO12. Where a digit of 0 (default) results in the associated input event getting initialized with the current hardware value, and a value of 1 will initialize the input event using the value saved in FFS prior to reset.
Notes	N/A
Example	AT\$IOTAR=000000000001 OK AT\$IOTAR? \$IOTAR: 000000000001 OK

GPRS Commands

AT+CGACT PDP Context Activate Or Deactivate

AT+CGACT	PDP Context Activate or Deactivate
Command Function	The execution command is used to activate or deactivate the specified PDP context (s).
Syntax Query	AT+CGACT=?
Syntax	+CGACT: (0,1) OK
Write Syntax	AT+CGACT=<state>,<cid>
Write Response	OK
Read Syntax	AT+CGACT?
Read Response	+CGACT: 1,0 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<state>	0 = deactivated 1 = activated
<cid>	numeric value of PDP context activation
Notes	It is not possible to omit the parameter <state>. AT+CGDCONT command must be entered prior to context activation. Activating a PDP Context through AT+CGACT will not allow for the modem to be used in a DUN connection. To use the modem in a DUN connection, use the AT\$AREG=2 command instead.

AT+CGATT Data Service Attach Or Detach

AT+CGATT	Data Service Attach or Detach
Command Function	The execution command is used to attach the device to, or detach the device from data service.
Syntax Query	AT+CGATT=?
Syntax	+CGATT: (0,1) OK
Write Syntax	AT+CGATT=<state>
Write Response	OK
Read Syntax	AT+CGATT?
Read Response	+GCATT: 0 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<state>	0 = detached 1 = attached
Notes	If parameter <state>is omitted the data service attach state will be changed.

AT+CGCLASS Mobile Station Class

AT+CGCLASS	Mobile Station Class
Command Function	Sets the device to operate to a specified mobile class.
Syntax Query	AT+CGCLASS=?
Syntax	+CGCLASS: ("A") OK
Write Syntax	AT+CGCLASS=<class>
Write Response	OK
Read Syntax	AT+CGCLASS?
Read Response	+CGCLASS: "A" OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<class>	"A" = class A
Notes	

AT+CGDATA Enter Data State

AT+CGDATA	Enter Data State
Command Function	The execution command causes the MT to perform whatever actions are necessary to establish communication between the TE and the network using one or more GPRS PDP types.
Syntax Query	AT+CGDATA=?
Syntax	+CGDATA: "PPP" OK
Write Syntax	AT+CGDATA=<L2P>,<cid>
Write Response	CONNECT
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<L2P>	"PPP"
<cid>	numeric value of PDP context activation
Notes	Supported value for <L2P>: "PPP".

AT+CGDCONT Define PDP Context

AT+CGDCONT	Define PDP Context
Command Function	Specifies PDP context parameter values for a PDP context identified by the (local) context identification parameter, <cid>.
Syntax Query	AT+CGDCONT=?
Syntax	+CGDCONT: (1-16),"IP",,,(0-2),(0-3) +CGDCONT: (1-16),"PPP",,,(0-2),(0-3) OK
Write Syntax	AT+CGDCONT=<cid>,<PDP_Type>,<APN>,<PDP_ADDR>,<d_comp>,<h_comp>
Write Response	OK
Read Syntax	AT+CGDCONT?
Read Response	+CGDCONT: <cid>,<PDP_Type>,<"APN">,<"PDP_ADDR">,<d_comp>,<h_comp> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<cid>	PDP Context Identifier a numeric parameter which specifies a particular PDP context definition. The parameter is local to the TE-MT interface and is used in other PDP context-related commands. The range of permitted values (minimum value = 1) is returned by the test form of the command.
<PDP_type>	"IP" or "PPP" Default is IP
<"APN">	"Access Point Name"
<"PDP_addr">	"Identifies the device in the address space"

AT+CGDCONT	Define PDP Context
<d_comp>	0 = PDP data compression disabled 1 = PDP data compression enabled 2 = PDP data compression based on V42_BIS
<h_comp>	0 = PDP header compression disabled 1 = PDP header compression enabled 2 = PDP header compression based on RFC 1144 3 = PDP header compression based on RFC 2507
Notes	<p>AT+CGDCONT must be entered before context activation.</p> <p>AT+CGDCONT=1,"IP","","",0,0 may be entered for networks that dynamically assign the APN. Contact your service provider for correct APN information.</p> <p>Multiple +CGDCONT entries can be used for Dial-Up Networking with the appropriate ATD*99**n# command where n represents the +CGDCONT index. For the TCP PAD and UDP PAD features, the 'n' is ignored and the first +CGDCONT index entry is always used.</p>

AT+CGEREP Data Service Event Reporting

AT+CGEREP	Data Service Event Reporting
Command Function	This command enables or disables sending of unsolicited result codes, +CGEV: XXX from MT to TE in the case of certain events occurring in the MT or the network.
Syntax Query	AT+CGEREP=?
Syntax	+CGEREP: (0-2),(0,1) OK
Write Syntax	AT+CGEREP=<mode>,<bfr>
Write Response	OK
Read Syntax	AT+CGEREP?
Read Response	+CGEREP: 0,0
	OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	

AT+CGEREP	Data Service Event Reporting
<mode>	<p>0 = buffer unsolicited result codes in the MT</p> <p>1 = discard unsolicited result codes when MT-TE link is reserved (e.g. in on-line data mode); otherwise forward them directly to the TE</p> <p>2 = buffer unsolicited result codes in the MT when MT-TE link is reserved (e.g. in on-line data mode) and flush them to the TE when MT-TE link becomes available; otherwise forward them directly to the TE</p>
<bfr>	<p>0 = MT buffer of unsolicited result codes defined within this command is cleared when <mode> 1 or 2 is entered</p> <p>1 = MT buffer of unsolicited result codes defined within this command is flushed to the TE when <mode> 1 or 2 is entered (OK response shall be given before flushing the codes)</p>
Notes	<p>If parameter <mode> is omitted it is assumed to be the value of the last command execution or the default value</p> <p>(0). If parameter <bfr> is omitted it is assumed to be the value of the last command execution or the default value (0).</p>

AT+CGPADDR Show PDP Address

AT+CGPADDR	Show PDP Address
Command Function	The execution command returns a list of PDP addresses for the specified context identifiers.
Syntax Query	AT+CGPADDR=?
Syntax	+CGPADDR: (1) OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CGPADDR=<cid>
Execute Response	+CGPADDR: 1 OK
Unsolicited Response	N/A
Parameter Values	
<cid>	Numeric value of PDP context activation
Notes	N/A

AT+CGQREQ Quality Of Service Profile (Requested)

AT+CGQREQ	Quality of Service Profile (Requested)
Command Function	Allows the TE to specify a Quality of Service Profile that is used when the MT sends an Activate PDP Context Request message to the network.
Syntax Query	AT+CGQREQ=?
Syntax	+CGQREQ: "IP",(1-3),(1-4),(1-5),(1-9),(1-18,31) OK
Write Syntax	AT+CGQREQ=<cid>,<precedence>,<delay>,<reliability.>,<peak>,<mean>
Write Response	OK
Read Syntax	AT+CGQREQ?
Read Response	+CGQREQ: 1,0,0,0,0,0 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<cid>	numeric value of PDP context activation
<precedence class>	1-3
<delay class>	1-4
<reliability class>	1-5
<peak throughput>	1-9
<mean throughput>	1-18,31
Notes	For any parameter where network subscribed is desired, enter 0. A special form of the set command, +CGQREQ=,... or +CGQMIN=,... provide a set of the default values of Quality of Service Profile for new PDP context definitions. AT+CGDCONT must be entered into the modem prior to entering AT+CGQREQ command.

GPS Commands

AT\$ALTOSI Set And Query GPS Overspeed Interval

AT\$ALTOSI	Set and Query GPS Overspeed Interval
Command Function	This command allows the user to define the criteria for a GPS overspeed event. A GPS overspeed event occurs when the minimum speed that is defined by the <speed> parameter is maintained for a specific duration of time.
Syntax Query	AT\$ALTOSI=?
Syntax	\$ALTOSI: (0 - 65535),(0-65535),(0-1) OK
Write Syntax	AT\$ALTOSI=<speed>,<interval>,<sticky>
Write Response	OK
Read Syntax	AT\$ALTOSI?
Read Response	\$ALTOSI: <speed>,<interval>,<status>,<max_speed>,<duration> OK
Execute Syntax	AT\$ALTOSI
Execute Response	ERROR
Unsolicited Response	N/A
Parameter Values	
<speed>	Speed, in knots, must be met and/or exceeded to trigger the GPS overspeed event.
<interval>	Number of consecutive seconds for which <speed> must be maintained to trigger the GPS overspeed event.
<sticky>	Optional parameter to make overspeed parameters persistent. If 1, then speed/interval are written to flash immediately (no AT&W required). Default = 0.
<status>	If 1, then <max_speed> and <duration> represent a GPS overspeed interval that is currently active. If 0, they represent the previous GPS overspeed interval.

AT\$ALTOSI	Set and Query GPS Overspeed Interval
<max_speed>	The highest speed (in knots) that was attained in the current or previous GPS overspeed interval.
<duration>	Number of consecutive seconds that the speed was at or above <speed>.
Notes	If <speed> is set to zero, the GPS overspeed event is disabled.

AT\$EXCACC Excessive Acceleration

AT\$EXCACC	Excessive Acceleration
Command Function	This command is used to configure the excessive acceleration event. Input event 198
Syntax Query	AT\$EXCACC=?
Syntax	\$EXCACC: (0-200),(1-20),(1-20) OK
Write Syntax	AT\$EXCACC=<THRESH>,<SET TIME >,<CLR TIME >
Write Response	OK
Read Syntax	AT\$EXCACC?
Read Response	\$EXCACC: <THRESH>,<SET TIME >,<CLR TIME> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<THRESH>	0 = Excessive Acceleration Event Disabled 1-200 = Acceleration Threshold (in Knots * 10)
<SET TIME>	1-20 = Number of seconds above threshold to set event
<CLR TIME>	1-20 = Number of seconds below threshold to clear event
Notes	A value of 100 for threshold equals 10 knots per second. This function uses GPS to determine acceleration.

AT\$EXCDEC Excessive Deceleration

AT\$EXCDEC	Excessive Deceleration
Command Function	This command is used to configure the excessive deceleration event. Input event 199.
Syntax Query	AT\$EXCDEC=?
Syntax	\$EXCDEC: (0-200),(1-20),(1-20) OK
Write Syntax	AT\$EXCDEC=<THRESH>,<SET TIME >,<CLR TIME >
Write Response	OK
Read Syntax	AT\$EXCDEC?
Read Response	\$EXCDEC: <THRESH>,<SET TIME >,<CLR TIME> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<THRESH>	0 – Excessive Deceleration Event Disabled 1-200 – Deceleration Threshold (in Knots * 10)
<SET TIME>	1-20 – Number of seconds above threshold to set event
<CLR TIME>	1-20 – Number of seconds below threshold to clear event
Notes	A value of 100 for threshold equals 10 knots per second. This function uses GPS to determine deceleration.

AT\$GEOFNC Geo Fencing A Circular Area

AT\$GEOFNC	Geo Fencing a Circular Area
Command Function	This command allows a user to send a GPS message when the device moves in or out of a geographical area.
Syntax Query	AT\$GEOFNC=?
Syntax	\$GEOFNC: (1-25),(0-1000000),(-90.0 - +90.0),(-180.0 - +180.0) OK
Write Syntax	AT\$GEOFNC=<fenceNum> <radius>,<latitude>,<longitude>
Write Response	OK
Read Syntax	AT\$GEOFNC?
Read Response	\$GEOFNC: <fenceNum>,<radius>,<latitude>,<longitude> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<fenceNum>	Defines the fence number
<radius>	Defines radius of the circle from given Latitude and Longitude coordinates (in meters)
<latitude>	Defines the latitude for the center point of a circle
<longitude>	Defines the longitude for the center point of a circle
Notes	<p>An AT\$EVENT command has to be set to send a GPS message to the remote host when entering or exiting the fenced area.</p> <p>Although this command accepts latitude/longitude parameters with up to 15 characters, internally the value is stored as a C float type which has less precision (but requires half the storage size). The float type is capable of storing accuracy commensurate with the GPS receiver's capability, but the queried latitude/longitude values of the AT\$GEOFNC command may differ from the input parameters due to this precision limitation.</p>

AT\$GFDBNC Set Geofence Debounce Count

AT\$GFDBNC	Set Geofence Debounce Count
Command Function	This command allows the user to set the number of consecutive geofence positions required to trigger an 'inside geofence' or 'outside geofence' event. It prevents a false reading when the device is on the threshold of the geofence.
Syntax Query	AT\$GFDBNC=?
Syntax	\$GFDBNC: (0-250),(0-250) OK
Write Syntax	AT\$GFDBNC=<out_cnt>,<in_cnt>
Write Response	OK
Read Syntax	AT\$GFDBNC?
Read Response	\$GFDBNC: <out_cnt>, <in_cnt> OK
Execute Syntax	N/A
Execute Response	
Unsolicited Response	N/A
Parameter Values	
<out_cnt>	Consecutive GPS position reports outside a geofence required to trigger 'O' condition for geofence input event (see \$EVENT)
<in_cnt>	Consecutive GPS position reports inside a geofence required to trigger 'I' condition for geofence input event (see \$EVENT)
Notes	The GPS reporting interval varies depending on the product. for the MT-Gx and MTxxxx products, the updates are sent every one second.

AT\$GFDEL Delete A Range Of Geo-Fences

AT\$GFDEL	Delete a Range of Geo-Fences
Command Function	This command deletes a range of geo-fences.
Syntax Query	AT\$GFDEL=?
Syntax	\$GFDEL: (1-25),(1-25) OK
Write Syntax	AT\$GFDEL=<start>,<stop>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<start>	First geo-fence index in range to be deleted
<stop>	Last geo-fence index in range to be deleted.
Notes	N/A

AT\$GFIDX# Geo Fencing Index

AT\$GFIDX#	Geo Fencing Index
Command Function	This command allows the user to query the modem for a single geofence from storage. The modem returns the index, radius, longitude and latitude. Longitude and latitude data is formatted for use in the GPS. Replace the # with the index number noted below.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$GFIDX<index>?
Read Response	
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	NA
Parameter Values	
<index>	(1-25) - Index to the geofence stored in the modem
Notes	N/A

AT\$GPSCMD GPS Command

AT\$GPSCMD	GPS Command
Command Function	This command allows the user to configure the state of the GPS module.
Syntax Query	AT\$GPSCMD=?
Syntax	\$GPSCMD: (0-3) OK
Write Syntax	AT\$GPSCMD=<cmd>
Write Response	OK
Read Syntax	AT\$GPSCMD?
Read Response	\$GPSCMD: <cmd> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<cmd>	0 - Disables the GPS 1 - Cold start 2 - Hot start 3 - Stop the current GPS fix
Notes	<p>0 - GPS is in an idle state</p> <p>1 - Commands GPS to begin acquisition from a cold start.</p> <p>2 - Hot start can only be accomplished if it has valid time, ephemeris, almanac and position data.</p> <p>3 - Some Novatel Wireless products do not tracking GPS, and is defined as GPS fix stop (for power consumption)</p> <p>After a power up or reset, the modem will attempt an assisted cold start. This is defined as the modem supplying the GPS receiver any valid time, ephemeris, almanac, and position data that the modem might have stored.</p>

AT\$GPSFD Restore GPS Filter Defaults

AT\$GPSFD	Restore GPS Filter Defaults
Command Function	<p>This command restores GPS filter defaults for the \$GPSQUAL, \$GPSFLT, and \$GPSRST commands without impacting the rest of the system configuration.</p> <p>This command is intended to be used after a software upgrade to take advantage of new filter settings without having to perform a full AT&F.</p> <p>This command accepts one parameter (a 'sticky' flag). If the sticky flag is set, the GPS filter defaults will be persistent. If the sticky flag is not set, the GPS filter defaults will not be maintained past the next modem reset.</p>
Syntax Query	AT\$GPSFD=?
Syntax	\$GPSFD: (0-1) OK
Write Syntax	AT\$GPSFD=<sticky>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<sticky>	0 = The GPS modem defaults will not be maintained past the next modem reset. 1 = The GPS modem defaults will be persistent.
Notes	

AT\$GPSFLT GPS Speed Filter

AT\$GPSFLT	GPS Speed Filter
Command Function	<p>At times the GPS chipset used by this device will report non-zero speeds when the device is not moving. Normally, the positions are accurate but the false speeds cause errors in the generation of the GPS idle, distance and odometer features. This filter is usually able to detect these false motions and clamp the reported speed to 0.0 knots while still reporting valid position data.</p> <p>Under normal circumstances, the default values should provide acceptable GPS performance for most applications. Please contact Novatel Wireless customer support if you feel the filter settings need to be changed for your application.</p>
Syntax Query	AT\$GPSFLT=?
Syntax	<p>If the \$GPSFLT debug flag is not set for expanded AT command response, the response will be as follows:</p> <p>\$GPSFLT: (0-2),(0-255),(0-180),(0-255),(0-255),(0-180),(0-180),(0-255),(0-255)</p> <p>OK</p> <p>If the \$GPSFLT debug flag is set for expanded AT command response, the response will be as follows:</p> <p>\$GPSFLT: md,tr,hdgD,tiAc,n4aAc,tiHdg,n4aHdg,pDop,dbg,unc,mot,ignB,tAdj</p> <p>OK</p>
Write Syntax	AT\$GPSFLT=<md>,<tr>,<hdgD>,<tiAc>,<n4aAc>,<tiHdg>,<n4aHdg>,<pDop>,<dbg>,<unc>,<mot>,<ignB>,<tAdj>
Write Response	OK
Read Syntax	AT\$GPSFLT?
Read Response	<p>AT\$GPSFLT: <md>,<tr>,<hdgD>,<tiAc>,<n4aAc>,<tiHdg>,<n4aHdg>,<pDop>,<dbg>,<unc>,<mot>,<ignB>,<tAdj></p> <p>OK</p>
Execute Syntax	N/A

AT\$GPSFLT	GPS Speed Filter
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<md>	<p>0 = filter is disabled</p> <p>1 = filter is enabled</p> <p>2 = automatic (default). Filter determines whether device is in parked mode or driving mode by determining the number of seconds the device has been idle. If in parked mode, filter is enabled. If in driving mode, filter is disabled. This improves the performance of the GPS idle, distance, and odometer features when coming off stop signs and red lights, while still stopping most of the false speed-related events when the device is parked.</p>
<tr>	<p>0-255 = Trust threshold.</p> <p>With each GPS report, this filter uses the other filter settings to assess a confidence level to determine if indicated motion seems valid. This confidence level is either incremented or reset with each report. The confidence level is converted into a trust factor which is compared against this threshold value. If the trust factor is less than this threshold and the device is in the parked motion state, the speed is clamped to 0.0 knots. If the trust factor is above or equal to this threshold, the speed from the \$GPRMC is allowed through and the device transitions into the driving state.</p> <p>Default is 16.</p>
<hdgD>	<p>0-180 = Heading delta threshold.</p> <p>This filter calculates the heading from the two most recent position reports and compares it to the heading provided in the \$GPRMC sentence. If the delta between the two headings is greater than this threshold (in degrees), the confidence level is reset to zero.</p> <p>Default is 30 degrees.</p>
<tiAc>	<p>0-255 = TI acceleration threshold.</p> <p>This filter calculates the velocity change from the reported \$GPRMC velocity in the two most recent position reports. If the reported</p>

AT\$GPSFLT	GPS Speed Filter
	<p>velocity change is greater than this threshold (in knots/sec), the confidence level is reset to zero.</p> <p>Default is 10 knots/second.</p>
<n4aAc>	<p>0-255 = Novatel Wireless acceleration threshold.</p> <p>This filter calculates the velocity change from the distance between the two most recent position locations and based on the time delta. If the calculated velocity change is greater than this threshold (in knots/sec), the confidence level is reset to zero.</p> <p>Default is 10 knots/second.</p>
<tiHdg>	<p>0-180 = TI heading change threshold.</p> <p>This filter calculates the heading change from the reported \$GPRMC heading in the two most recent position reports. If the heading change is greater than this threshold (in degrees/second), the confidence level is reset to zero.</p> <p>Default is 30 degrees/second.</p>
<n4aHdg>	<p>0-180 = Novatel Wireless heading change threshold.</p> <p>This filter calculates the heading using the two most recent position locations and based on the time delta. If the difference between the two most-recent heading calculations is greater than this threshold (in degrees/second), the confidence level is reset to zero.</p> <p>Default is 30 degrees/second.</p>
<pDop>	<p>Obsolete. This value is no longer used. The field is maintained for backwards compatibility.</p>
<dbg>	<p>Bit mask made up of the following bit definitions:</p> <p>1 = Display all filter actions to serial port. If \$GPSQUAL or \$GPSFLT filters take any action the change or invalidate the GPS report, setting this bit will allow the code to display the action that was taken.</p>

AT\$GPSFLT	GPS Speed Filter
	<p>2 = Display runtime filter info to serial port. Allows code to display calculations/variables used by the filter.</p> <p>4 = Display geofence timing debug info.</p> <p>8 = System test flag.</p> <p>16 = GPS log flag. Enables code to log raw GPS data to a file in flash for post-mortem analysis for certain filtering events.</p> <p>32 = GPS message flag. Enabled code to send a message over the air and to the serial port, indicating that an abnormal GPS event has been detected and logged.</p> <p>64 = Raw NMEA flag. Display raw NMEA input on the serial port.</p> <p>128 = Expand \$GPSFLT=? and \$GPSQUAL=? Responses to provide a verbose explanation of each parameter.</p>
<unc>	<p>0-255 = Position uncertainty threshold.</p> <p>If internal position uncertainty value is greater than this value, the confidence level is reset to zero.</p> <p>Default is 75.</p>
<mot>	<p>0-999 = Motion transition threshold (in seconds).</p> <p>If device has been idle (no velocity) for this number of seconds, transition from driving mode to parked mode.</p> <p>Default is 120 seconds.</p>
<ignB>	<p>0-255 = Ignition bias.</p>

AT\$GPSFLT	GPS Speed Filter
	<p>For devices that are connected to the ignition via the white wire, the code can detect when the ignition is turned on/off and adjust the trust threshold accordingly. (Vehicles with the ignition off would only be moving if being towed. Vehicles with the ignition on will probably be driving if not moving already.)</p> <p>For devices that are not connected to the ignition, this value should be set to 0.</p> <p>Default is 6.</p>
<tAdj>	<p>0 = Do not adjust RTC time if RTC time disagrees with GPS time.</p> <p>1 = Adjust RTC time if RTC time and GPS time differ by more than 5 seconds.</p> <p>Default is 1.</p>
Notes	<p>There have also been cases where slow Time To First Fix (TTFF) reports have been attributed to discrepancies between the RTC time and the GPS time. When GPS filtering is enabled, the code ensures the RTC time is always with +/-5 seconds of the GPS time. This time sync feature is disabled by setting \$GPSFLT=0.</p> <p>If GPS filtering is modified or disabled, performance degradation may result.</p> <p>With the implementation of this filter, the \$ODOCFG command is now obsolete. For backwards compatibility, the \$ODOCFG command will still be accepted, but the code will take no action on its parameters.</p>

AT\$GPSLCL Configure Sending Of GPS Message To The Serial Port

AT\$GPSLCL	Configure Sending of GPS Message to the Serial Port
Command Function	This command allows the user to configure sending of GPS data on the serial port.
Syntax Query	AT\$GPSLCL=?
Syntax	\$GPSLCL: (0-1),(0-127) OK
Write Syntax	AT\$GPSLCL=<option>,<nmeaMsgs>
Write Response	OK
Read Syntax	AT\$GPSLCL?
Read Response	\$GPSLCL: <option>,<nmeaMsgs> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	

AT\$GPSLCL	Configure Sending of GPS Message to the Serial Port												
<option>	<p>0 - Disable sending of GPS data to the local port when the device is in AT command mode (Default)</p> <p>1 - Enable sending of GPS NMEA ASCII data to the local port when the device is in AT command mode</p>												
<nmeaMsgs>	<p>This field is the bit-wise OR of the type of messages desired. The user has following message options to select from.</p> <p>Decimal Format</p> <table> <thead> <tr> <th>User Selectable</th><th>Type of NMEA Message</th></tr> </thead> <tbody> <tr> <td>1</td><td>GGA</td></tr> <tr> <td>4</td><td>GSA</td></tr> <tr> <td>8</td><td>GSV</td></tr> <tr> <td>16</td><td>RMC</td></tr> <tr> <td>64</td><td>PENFG</td></tr> </tbody> </table>	User Selectable	Type of NMEA Message	1	GGA	4	GSA	8	GSV	16	RMC	64	PENFG
User Selectable	Type of NMEA Message												
1	GGA												
4	GSA												
8	GSV												
16	RMC												
64	PENFG												
Notes	is used for debug purpose as directed by Novatel Wireless Technical Support Personnel. It is not a standard NMEA message.												

AT\$GPSLNA Enable/Disable Internal LNA

AT\$GPSLNA	Enable/Disable Internal LNA
Command Function	This command is used to enable and disable the internal Low Noise Amplifier (LNA)
Syntax Query	\$GPSLNA=?
Syntax	\$GPSLNA: (0-2) OK
Write Syntax	\$GPSLNA=<cfg>
Write Response	OK
Read Syntax	\$GPSLNA?
Read Response	\$GPSLNA: =<cfg>,<actual> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<cfg>	0 = Internal LNA enabled 1 = Internal LNA disabled 2 = Automatic (default)
<actual>	0 = Internal LNA enabled 1 = internal LNA disabled
Notes	

AT\$GPSOSI Set And Query GPS Overspeed Interval

AT\$GPSOSI	Set and Query GPS Overspeed Interval
Command Function	This command allows the user to define the criteria for a GPS overspeed event. A GPS overspeed event occurs when the minimum speed that is defined by the <speed> parameter is maintained for a specific duration of time.
Syntax Query	AT\$GPSOSI=?
Syntax	\$GPSOSI: (0-255),(0-65536),(0-1) OK
Write Syntax	AT\$GPSOSI=<speed>,<interval>,<sticky>
Write Response	OK
Read Syntax	AT\$GPSOSI?
Read Response	\$GPSOSI: <speed>, <interval>, <status>, <max_speed>, <duration> OK
Execute Syntax	AT\$GPSOSI
Execute Response	ERROR
Unsolicited Response	N/A
Parameter Values	
<speed>	Speed, in knots, must be met and/or exceeded to trigger the GPS overspeed event.
<interval>	Number of consecutive seconds for which <speed> must be maintained to trigger the GPS overspeed event.
<sticky>	Optional parameter to make overspeed parameters persistent. If 1, then speed/interval are written to flash immediately (no AT&W required). Default = 0.
<status>	If 1, then <max_speed> and <duration> represent a GPS overspeed interval that is currently active. If 0, they represent the previous GPS overspeed interval.

AT\$GPSOSI	Set and Query GPS Overspeed Interval
<max_speed>	The highest speed (in knots) that was attained in the current or previous GPS overspeed interval.
<duration>	Number of consecutive seconds that the speed was at or above <speed>.
Notes	If <speed> is set to zero, the GPS overspeed event is disabled.

AT\$GPSQUAL GPS Quality Filters

AT\$GPSQUAL	GPS Quality Filters
Command Function	This command allows the user to define extra criteria for the event engine to use before it reports a position fix as valid.
Syntax Query	AT\$GPSQUAL=?
Syntax	If the \$GPSFLT debug flag is not set for expanded AT command response, the response will be as follows: \$GPSQUAL: (0-255),(0-255),(0-30) OK
Write Syntax	AT\$GPSQUAL=<flg>,<hdop>,<sats>
Write Response	OK
Read Syntax	AT\$GPSQUAL?
Read Response	\$GPSQUAL:<flg>,<hdop>,<sats>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<flg>	<p>Bit mask made up of the following bit definitions:</p> <p>1 = Mark GPS report invalid if \$GPGSA fix type is 2 (2D fix). This bit is provided for backwards compatibility with legacy products. It has not been shown to improve performance with this product.</p> <p>2 = Mark GPS report invalid if the report is based on a propagated fix.</p> <p>4 = Request POSITION EXTENDED report (in place of the basic POSITION report) from GPS chipset. This report includes additional info that the basic POSITION report does not.</p> <p>8 = Request MEASUREMENT EXTENDED report. This report includes information about satellite speeds which can be used in filtering.</p> <p>Default is 12 (request both POSITION EXTENDED and MEASUREMENT EXTENDED reports).</p>
<hdop>	<p>0 = Ignore HDOP when filtering. (default)</p> <p>1-255 = Mark GPS report invalid if HDOP value from \$GPGSA</p>

AT\$GPSQUAL	GPS Quality Filters
	<p>sentence is less than or equal to this indicated HDOP limit.</p> <p>This field is provided for backwards compatibility with legacy products. It has not been shown to improve performance with this product.</p>
<sats>	<p>0 (default) = Disregard # of satellites during filtering.</p> <p>1-30 = Mark GPS report invalid if the # of satellites in reported solution (from \$GPGLA sentence) is below this value.</p>
Notes	<p>The units of the uncertainty threshold should not be taken literally. For example, a position uncertainty threshold of 100 meters does not guarantee that the actual location will be within 100 meters of the actual position.</p> <p>Please consult with Novatel Wireless technical support personnel before changing uncertainty thresholds.</p>
Example:	

AT\$GPSRD Read Current GPS ASCII Data

AT\$GPSRD	Read Current GPS ASCII data												
Command Function	This command allows a user to read current NMEA format GPS data.												
Syntax Query	AT\$GPSRD=?												
Syntax	\$GPSRD: [(0-7F),(0-127)],(0-1) OK												
Write Syntax	N/A												
Write Response	N/A												
Read Syntax	AT\$GPSRD=<nmeaMsgs>,<decimal>												
Read Response	“\$GPG.....” OK												
Execute Syntax	N/A												
Execute Response	N/A												
Unsolicited Response	NA												
Parameter Values	The output NMEA sentence depends on whether the <nmeaMsgs> parameter is entered in Hex or Decimal format. By default, the <decimal> parameter is not required and <nmeaMsgs> parameter has to be entered as HEX value without the preceding “0x” characters as outlined in Hex Format table below.												
<nmeaMsgs>	<p>This field is the sum of the type of NMEA messages desired. A user has the following message options to select from. Maximum value for <nmeaMsgs> in this case would be 7F in Hex format or 127 in decimal format.</p> <p>Hex Format</p> <table> <thead> <tr> <th>User Selectable</th><th>Type of NMEA Message</th></tr> </thead> <tbody> <tr> <td>0x01</td><td>GGA</td></tr> <tr> <td>0x04</td><td>GSA</td></tr> <tr> <td>0x08</td><td>GSV</td></tr> <tr> <td>0x10</td><td>RMC</td></tr> <tr> <td>0x40</td><td>PENFG</td></tr> </tbody> </table>	User Selectable	Type of NMEA Message	0x01	GGA	0x04	GSA	0x08	GSV	0x10	RMC	0x40	PENFG
User Selectable	Type of NMEA Message												
0x01	GGA												
0x04	GSA												
0x08	GSV												
0x10	RMC												
0x40	PENFG												

AT\$GPSRD	Read Current GPS ASCII data												
	<p>Decimal Format</p> <table> <tr> <th>User Selectable</th><th>Type of NMEA Message</th></tr> <tr> <td>1</td><td>GGA</td></tr> <tr> <td>4</td><td>GSA</td></tr> <tr> <td>8</td><td>GSV</td></tr> <tr> <td>16</td><td>RMC</td></tr> <tr> <td>64</td><td>PENFG</td></tr> </table>	User Selectable	Type of NMEA Message	1	GGA	4	GSA	8	GSV	16	RMC	64	PENFG
User Selectable	Type of NMEA Message												
1	GGA												
4	GSA												
8	GSV												
16	RMC												
64	PENFG												
<decimal>	<p>1 = <nmeaMsg> value has to be sum of User Selectable values from decimal table format</p> <p>0 = select values out of hex table format</p>												
Notes	The \$PENFG (Proprietary ENFora Gps) is used for debug purpose as directed by Novatel Wireless Technical Support Personnel. It is not a standard NMEA message.												

AT\$GPSRST Set And Query GPS Reset Interval

AT\$GPSRST	Set and Query GPS Reset Interval
Command Function	<p>This command allows the user to specify the duration of a continuous GPS no lock condition after which the GPS chip will be reset.</p> <p>The GPS will often take several minutes to get a lock when power has been cycled to the device. However, if valid RTC time is available, then the lock should be acquired more quickly. The second parameter allows the user to cut down the time without a lock before resetting the GPS chip when outside of the cold start window.</p>
Syntax Query	AT\$GPSRST=?
Syntax	\$GPSRST: (0-255),(0-255) OK
Write Syntax	AT\$GPSRST=<coldStartInterval>,<warmStartInterval>
Write Response	OK
Read Syntax	AT\$GPSRST?
Read Response	\$GPSRST: <coldStartInterval>,<warmStartInterval> <filtCnt> OK
Execute Syntax	AT\$GPSRST
Execute Response	ERROR
Unsolicited Response	N/A
Parameter Values	
<coldStartInterval>	When RTC time is not valid (year < 2010), this is the time (in tens of minutes) of GPS outage after which to reset the GPS chip and resume positioning.

AT\$GPSRST	Set and Query GPS Reset Interval
<warmStartInterval>	When RTC time is valid (year >= 2010) and this value is zero, then coldStartInterval is used as defined above. When RTC time is valid (year >= 2010) and this value is greater than zero, this is the time (in minutes) of GPS outage after which to reset the GPS chip and resume positioning.
Notes	If <coldStartInterval> is set to 0, the GPS chip will not be reset after a GPS outage of any duration.
Example	AT\$GPSRST=1,2 Code will allow 10 minutes to acquire a GPS lock before resetting the GPS chip following a power cycle (RTC time not valid). Once a lock has been acquired (RTC time automatically set when a lock has been acquired), the code will allow two minutes of 'no GPS lock' time before resetting the GPS chip. Since RTC time is maintained through an ignition reset, the two minute limit would be in effect following an ignition reset.

AT\$GPSVAL GPS Speed Validation

AT\$GPSVAL	GPS Speed Validation
Command Function	This command is used to turn GPS speed filtering on and off.
Syntax Query	AT\$GPSVAL=?
Syntax	\$ GPSVAL: (0-1),(0-1) OK
Write Syntax	AT\$ GPSVAL =<MODE>,<ACC MOTION>
Write Response	OK
Read Syntax	AT\$ GPSVAL?
Read Response	\$ GPSVAL: <MODE>,< ACC MOTION > OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<MODE>	0 - Use default for GPS Speed filter 1 - Disable GPS Speed filter
<ACC MOTION>	0 - Use accelerometer to determine motion 1 - Do not use accelerometer to determine motion This parameter is not available to all MT Products. This field is to enable the use of the accelerometer to assist the GPS filter in determining motion. This value is not relevant if <MODE> = 1.
Notes	The GPS speed filter here is the same as the GPS speed filter in \$GPSFLT.
Examples	

AT\$ODOMETER GPS Trip Odometer

AT\$ODOMETER	GPS Trip Odometer
Command Function	The \$ODOMETER command records how far the vehicle has traveled total, or in one trip. The user can reset the odometer at the beginning of a new trip. This is identical to the \$TODOM feature, but allows the user to reset this odometer without resetting the other odometer.
Syntax Query	AT\$ODOMETER=?
Syntax	\$ODOMETER: (0-4000000000)
Write Syntax	AT\$ODOMETER=1234 (where 1234 is distance in meters)
Write Response	OK
Read Syntax	AT\$ODOMETER?
Read Response	\$ODOMETER xxxx (xxxx=distance traveled in meters)
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
Notes	<p>The user is able to set a seed value for the Trip Odometer starting at 0 but not higher than the maximum value of 4000000000.</p> <p>The AT&F command will not reset the odometer value to 0.</p> <p>The Virtual Odometer reading would be a 4-byte value starting from 0 to 4000000000 (maximum of approximately 2500000 miles before it rolls over to 0)</p> <p>The unit for Virtual Odometer shall be in METERS.</p> <p>The Virtual Odometer history shall be updated every second</p> <p>The Virtual Odometer history shall be saved once a minute in modem's memory. This value shall be retained through an internal or external reset and can be read upon the next power up or during run time mode. The delta distance traveled between the minute marks could be lost due to an unexpected external or non-modem originated reset. However, the total distance traveled till the prior minute would still be preserved.</p>

AT\$PLYCLR Clear Polygonal Geofence

AT\$PLYCLR	Clear Polygonal Geofence
Command Function	This command allows a user to delete all the points for the indicated polygonal geofence (see \$PLYFN#).
Syntax Query	AT\$PLYCLR=?
Syntax	\$PLYCLR: (0-24) OK
Write Syntax	AT\$PLYCLR=<id>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<id>	0-24: identifier of geographical polygon (see \$PLYFN#)
Notes	

AT\$PLYFN# Geo Fencing A Polygonal Area

AT\$PLYFN#	Geo Fencing a Polygonal Area
Command Function	<p>This command allows a user to define up to 25 separate polygonal geographical areas (# can be any number from 0 to 24). The event engine (see AT\$EVENT) can be set up to send a message when the device moves in or out of the geographical area defined by the polygon.</p> <p>Each command defines one of 26 possible vertices or corners. The line segments of the polygon are generated by connecting the non-zero vertices in sequence (for example, point 0 is connected to point 1, which is connected to point 2, etc.). The polygon can be generated in either a clockwise or counterclockwise sequence (see Notes section below for additional details). You can specify your polygon with less than 26 vertices, but the first and last points of the polygon still must be identical</p> <p>The query returns all non-zero locations defined for the polygon as well as all (0,0) vertex locations that serve as a polygon terminator.</p>
Syntax Query	AT\$PLYFN#=?
Syntax	\$PLYFN#: (0-25),(-90.0 - +90.0),(-180.0 - +180.0) OK
Write Syntax	AT\$PLYFN#=<idx>,<latitude>,<longitude>
Write Response	OK
Read Syntax	AT\$PLYFN#?
Read Response	\$PLYFN#: PtIdx Latitude Longitude <idx> <latitude> <longitude> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<idx>	0-25: index for this vertex of the polygon

AT\$PLYFN#	Geo Fencing a Polygonal Area
<latitude>	Defines the latitude for this vertex of the polygon in decimal degrees (for example, 32 degrees 30 minutes 0 seconds would be represented as 32.5 degrees since 30 minutes is exactly 1/2 of a degree). The latitude must be specified in 15 characters (including minus sign and decimal point) or less. This is the same representation for latitude as used in the AT\$GEOFNC command.
<longitude>	Defines the longitude for this vertex of the polygon in decimal degrees (for example, -96 degrees 45 minutes 0 seconds would be represented as -96.75 degrees since 45 minutes is exactly 3/4 of a degree). The longitude must be specified in 15 characters (including minus sign and decimal point) or less. This is the same representation for longitude as used in the AT\$GEOFNC command.
Notes	<p>In general, it is always a good idea to verify the integrity of your polygon description with a mapping tool such as Google Earth. The most common mistake with polygons is to mistype one of the fractional digits in one of the coordinates. When this happens, the polygon you've created with your mapping tool is not the polygon you've entered into this command and you will not get your desired results.</p> <p>The code implements the pnpoly algorithm. The pnpoly algorithm is copyright © 1970-2003, Wm. Randolph Franklin.</p> <p>Regardless of how many points you specify for your polygon, all 26 points are fed to the algorithm. Due to the mathematical nature of this algorithm, the polygon will not work if vertices of the same polygon lie on opposite sides of the 180 degree longitude divide.</p> <p>Although this command accepts latitude/longitude parameters with up to 15 characters, internally the value is stored as a C float type which has less precision (but requires half the storage size). The float type is capable of storing accuracy commensurate with the GPS receiver's capability, but the queried latitude/longitude values of the AT\$PLYFN# command may differ from the input parameters due to this precision limitation.</p>
Example	<p>The following commands create a crude diamond-shaped polygon #9 just west of the Novatel Wireless offices in Richardson, Texas:</p> <pre> AT\$PLYFN9=1,32.995498,-96.722064 AT\$PLYFN9=2,33.000392,-96.715028 AT\$PLYFN9=3,33.008747,-96.722466 AT\$PLYFN9=4,33.001330,-96.732982 AT\$PLYFN9=5,32.995498,-96.722064 </pre>

AT\$PLYFN#	Geo Fencing a Polygonal Area																					
	<p>Here's the query response for that polygon definition:</p> <p>AT\$PLYFN9?</p> <p>\$PLYFN9: PtIdx Latitude Longitude</p> <table><tr><td>0</td><td>0.0000000</td><td>0.0000000</td></tr><tr><td>1</td><td>32.9954987</td><td>-96.7220612</td></tr><tr><td>2</td><td>33.0003929</td><td>-96.7150269</td></tr><tr><td>3</td><td>33.0087471</td><td>-96.7224655</td></tr><tr><td>4</td><td>33.0013313</td><td>-96.7329788</td></tr><tr><td>5</td><td>32.9954987</td><td>-96.7220612</td></tr><tr><td>6</td><td>0.0000000</td><td>0.0000000</td></tr></table> <p>OK</p>	0	0.0000000	0.0000000	1	32.9954987	-96.7220612	2	33.0003929	-96.7150269	3	33.0087471	-96.7224655	4	33.0013313	-96.7329788	5	32.9954987	-96.7220612	6	0.0000000	0.0000000
0	0.0000000	0.0000000																				
1	32.9954987	-96.7220612																				
2	33.0003929	-96.7150269																				
3	33.0087471	-96.7224655																				
4	33.0013313	-96.7329788																				
5	32.9954987	-96.7220612																				
6	0.0000000	0.0000000																				

AT\$PWRSAPV Enable Power Save Mode

AT\$PWRSAPV	Enable Power Save Mode
Command Function	This command allows a user to put the device in low power mode at the <timeout> interval after the Ignition line drops. The ignition line has to be connected per the user manual for this feature to work properly. A user has the capability of getting a notification when the device entering low power mode or returns to normal operating mode.
Syntax Query	AT\$PWRSAPV=?
Syntax	\$PWRSAPV: (0-1),(0-65535),(0-1) OK
Write Syntax	AT\$PWRSAPV=<ign>,<timeout>,<reg>
Write Response	OK
Read Syntax	AT\$PWRSAPV?
Read Response	\$PWRSAPV: 0,0,0 OK
Execute Syntax Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<ign>	0 - disable the Ignition feature 1 - enter low power mode after Ignition signal went low and timeout has expired
<timeout>	0 - 65535 seconds. Timeout value after which the unit will enter low power mode. Unit will work in normal mode until the timeout has expired.
<reg>	0 - remain registered with network during low power mode 1 - reset modem when entering normal power mode
Notes	An AT\$EVENT command has to be set to send a GPS message to the remote host when entering or exiting power save mode. The modem Ignition (switched power) Input must be connected to the vehicles ignition line for this function to work.

AT\$TODOM Virtual Trip Odometer

AT\$TODOM	Virtual Trip Odometer
Command Function	The \$TODOM command records how far the vehicle has traveled. This is identical to the \$ODOMETER feature, but allows the user to reset this trip odometer without resetting the other odometer.
Syntax Query	AT\$TODOM=?
Syntax	\$TODOM:(0-40000000000) OK
Write Syntax	AT\$TODOM=1234 (where 1234 is distance in meters)
Write Response	OK
Read Syntax	AT\$TODOM?
Read Response	\$TODOM: xxxx (xxxx=distance traveled in meters)
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A

AT\$TODOM	Virtual Trip Odometer
Parameter Values	N/A
Notes	<p>The user is able to set a seed value for the Trip Odometer starting at 0 but not higher than the maximum value of 4000000000.</p> <p>The AT&F command will not reset the odometer value to 0. (see example below)</p> <p>The Trip Odometer reading would be a 4-byte value starting from 0 to 4000000000 (maximum of approximately 2500000 miles before it rolls over to 0)</p> <p>The unit for Trip Odometer shall be in meters.</p> <p>The Trip Odometer history shall be updated every second.</p> <p>The Trip Odometer history shall be saved once a minute in modem's memory. This value shall be retained through an internal or external reset and can be read upon the next power up or during run time mode. The delta distance traveled between the minute marks could be lost due to an unexpected reset. However, the total distance traveled till the prior minute would still be preserved.</p> <p>The \$ODOMETER value can trigger the event engine via input event 70. The \$TODOM value can trigger the event engine via input event 91.</p>
Example	<p>Reset Trip Odometer to 0:</p> <p>\$TODOM=0</p>

SMS Commands

AT\$SMSURC Enable URC To Be Sent By SMS

AT\$SMSURC	Enable URC to be sent by SMS
Command Function	This command enables some URCs to be sent via SMS.
Syntax Query	AT\$SMSURC=?
Syntax	\$SMSURC: (0-1),(0-1) OK
Write Syntax	AT\$SMSURC=<urc1>,<urc2>
Write Response	OK
Read Syntax	AT\$SMSURC?
Read Response	\$SMSURC: OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<urc1>	0 = Do not send URCs from \$FTPOPEN, \$FTPCLOSE, \$FTPGET, and \$FTPPUT via SMS if the command was sent via SMS 1 = Send URCs from \$FTPOPEN, \$FTPCLOSE, \$FTPGET, and \$FTPPUT via SMS if the command was sent via SMS
<urc2>	0 = Do not send URCs from \$ATEXEC via SMS if the command was sent via SMS 1 = Send URCs from \$ATEXEC via SMS if the command was sent via SMS
Notes	N/A

AT+CGSMS Select Service For MO SMS Messages

AT+CGSMS	Select Service for MO SMS Messages
Command Function	The set command is used to specify the service or service preference that the MT will use to send MO SMS messages.
Syntax Query	AT+CGSMS=?
Syntax	+CGSMS: (0-3) OK
Write Syntax	AT+CGSMS=<service>
Write Response	OK
Read Syntax	AT+CGSMS?
Read Response	:+CGSMS: 3 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<service>	0 = GPRS 1 = circuit switched 2 = GPRS preferred (use circuit switched if GPRS not available) 3 = circuit switched preferred (use GPRS if circuit switched not available)
Notes	If parameter <service> is omitted the command does nothing. SMS over GPRS has not been fully tested.

AT+CMGC Send Command

AT+CMGC	Send Command
Command Function	Execution command sends a command message from a TE to the network (SMS-COMMAND). The entering of PDU is done similarly as specified in command Send Message +CMGS. Message reference value <mr> is returned to the TE on successful message delivery
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CMGC=<length>
Execute Response	PDU is given<ctrl-Z> +CMGC: <mr>[,<ackpdu>] OK
Unsolicited Response	N/A
Parameter Values	
<length>	length of PDU message in octets
<mr>	Message reference
<ackpdu>	data element of ack-pdu
Notes	This command only applicable to pdu mode .

AT+CMGD Delete Message

AT+CMGD	Delete Message
Command Function	Deletes message from preferred storage location.
Syntax Query	AT+CMGD=?
Syntax	+CMGD: (list of message indexes),(0-4)
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CMGD=<index>,<status>
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	
<index>	Integer value of memory location.
<status>	0 = Delete the messages specified by the index 1 = Ignore the index and delete all the read messages 2 = Ignore the index and delete all the read and sent messages 3 = Ignore the index and delete all the read, sent and unsent messages. 4 = Ignore the index and delete all the messages whatever the status is
Notes	If there is no message stored in the selected index, an error will be returned.

AT+CMGF SMS Format

AT+CMGF	SMS Format
Command Function	Set command tells the TA, which input and output format of messages to use. <mode> indicates the format of messages used with send, list, read and write commands and unsolicited result codes resulting from received messages.
Syntax Query	AT+CMGF=?
Syntax	+CMGF: (1) OK
Write Syntax	AT+CMGF=<mode>
Write Response	OK
Read Syntax	AT+CMGF?
Read Response	+CMGF: 1 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<mode>	1 = Text mode
Notes	

AT+CMGL List Messages

AT+CMGL	List Messages
Command Function	List messages from storage.
Syntax Query	AT+CMGL=?
Syntax	+CMGL: ("REC UNREAD","REC READ","STO UNSENT","STO SENT","ALL") OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CMGL =<stat>
Execute Response	+CMGL: <index>,<stat>,<da/oa>, [<alpha>,<scts>,<tooa/toda>,<length>] <CR><LF> data OK
Unsolicited Response	N/A
Parameter Values	See Notes
<index>	Memory location integer
<stat>	Status of message "REC UNREAD" "REC READ" "STO UNREAD" "STO READ" "ALL"
<do/oa>	destination address
<alpha>	alphanumeric representation of <da> or <oa> corresponding to the entry found in MT phonebook
<scts>	Service center time stamp

AT+CMGL	List Messages
<tooa/toda>	Address Type-of-Address octet in integer format
<length>	Length of message in octets
Notes	<p>Above settings for <stat> assume AT+CMGF=1 (text mode).</p> <p>Parameters in [] may or may not be reported dependent upon the setting of AT+CMGF.</p> <p>0 = "Rec Unread"</p> <p>1 = "Rec Read"</p> <p>2 = "Sto Unsent"</p> <p>3 = "Sto Sent"</p> <p>4 = "ALL"</p>

AT+CMGR Read Message

AT+CMGR	Read Message
Command Function	Read stored messages.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CMGR=<index>
Execute Response	+CMGR: <stat>,<oa>,<scts>,[<tooa>,<fo>,<pid>,<sca>,<tosca>,<length>]<CR><LF><data> OK
Unsolicited Response	N/A
Parameter Values	
<stat>	Status of message (Rec Read, Rec Unread, Sto Unsent, Sto Sent)
<oa>	Originating address
<scts>	Service center time stamp
<tooa>	Originating address - type of address
<fo>	First octet
<pid>	Protocol identifier
<sca>	Service center address
<tosca>	Type of address
<length>	Length of message in octets
Notes	The above parameters are for text mode.

AT+CMGS Send Message

AT+CMGS	Send Message
Command Function	Sends message from the TE to the network.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CMGS="<da>",[<toda>]
Execute Response	Enter text <cntl Z> +CMGS <mr> OK
Unsolicited Response	N/A
Parameter Values	
<da>	Destination address
<mr>	Message reference
Notes	The example provided is for text mode (AT+CMGF=1).

AT+CMGW Write Message To Memory

AT+CMGW	Write Message to Memory
Command Function	Writes message to preferred storage location.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CMGW=<"da"><CR><LF>
Execute Response	Text is entered<ctrlZ> +CMGW: <index> OK
Unsolicited Response	N/A
Parameter Values	
<da>	Destination Address
<index>	Integer value of memory location of the stored message
Notes	The above is for text mode only.

AT+CMSS Send Message From Storage

AT+CMSS	Send Message from Storage
Command Function	Sends message (with location value) from preferred message storage.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CMSS=<index>
Execute Response	+CMSS: <mr> OK
Unsolicited Response	N/A
Parameter Values	
<index>	Integer value of location number supported by associated memory
<mr>	Message reference
Notes	The above is for text mode only.

AT+CNMI New Message Indication To TE

AT+CNMI	New Message Indication to TE
Command Function	Selects how incoming messages from the network are indicated to the TE when the TE is active.
Syntax Query	AT+CNMI=?
Syntax	+CNMI: (0-2),(0-3),(0),(0),(0,1) OK
Write Syntax	AT+CNMI=<mode>,<mt>,<bm>,<ds>,<bfr>
Write Response	OK
Read Syntax	AT+CNMI?
Read Response	+CNMI: 0,0,0,0,0 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<mode>	0 = Buffer unsolicited result codes in the TA 1 = Discard indication and reject new received message unsolicited result codes when TA-TE link is reserved 2 = Buffer unsolicited result codes in the TA when TA-TE link is reserved and flush them to the TE after reservation
<mt>	Receiving procedure for different message data coding schemes (refer GSM 03.38 [2])
<mt> 0	no class: as in GSM 03.38, but use <mem3> as preferred memory class 0: as in GSM 03.38, but use <mem3> as preferred memory if message is tried to be stored class 1: as in GSM 03.38, but use <mem3> as preferred memory class 2: as in GSM 03.38 class 3: as in GSM 03.38, but use <mem3> as preferred memory message waiting indication group (discard message): as in GSM 03.38, but use <mem3> as preferred memory if message is tried to

AT+CNMI	New Message Indication to TE
	<p>be stored</p> <p>message waiting indication group (store message): as in GSM 03.38, but use <mem3> as preferred memory</p>
<mt>1	as <mt>=0 but send indication if message stored successfully
<mt>2	<p>no class: route message to TE</p> <p>class 0: as in GSM 03.38, but also route message to TE and do not try to store it in memory</p> <p>class 1: route message to TE</p> <p>class 2: as <mt>=1</p> <p>class 3: route message to TE</p> <p>message waiting indication group (discard message): as in GSM 03.38, but also route message to TE and do not try to store it in memory</p> <p>message waiting indication group (store message): as <mt>=1</p>
<mt>3	<p>class 3: route message to TE</p> <p>others: as <mt>=1</p>
<bm>	<p>0 <bm> No CBM indications are routed to the TE</p> <p>If CBM is stored into ME/TA, indication of the memory location is routed to the TE using unsolicited result code:</p> <p>+CBMI: <mem>,<index></p> <p>1 New CBMs are routed directly to the TE using unsolicited result code</p> <p>2 Class 3 CBMs are routed directly to TE using unsolicited result codes defined in <bm>=2. If CBM storage is supported, messages of other classes result in indication as defined in <bm>=1</p>

AT+CNMI	New Message Indication to TE
<ds>	<p>0 = No SMS-STATUS_REPORTs are routed to the TE</p> <p>1 = SMS-STATUS-REPORTs are routed to the TE using unsolicited result code.</p>
<bfr>	<p>0 =TA buffer of unsolicited result codes defined within this command is flushed to the TE when <mode> 1...2 is entered.</p> <p>1 = TA buffer of unsolicited result codes defined within this command is cleared when <mode> 1...2 is entered.</p>
Notes	For CDMA Version: The 3rd and 4th params are ignored and are not range checked.

AT+CPMS Preferred Message Storage

AT+CPMS	Preferred Message Storage
Command Function	Set command selects memory storages <mem1>, <mem2> and <mem3> to be used for reading, writing, etc.
Syntax Query	AT+CPMS=?
Syntax	+CPMS: ("SM","SR"),("SM","SR"),("SM","SR") OK
Write Syntax	AT+CPMS=<mem1>,<mem2>,<mem3>
Write Response	+CPMS: 0,25,0,25,0,25 OK
Read Syntax	AT+CPMS?
Read Response	+CPMS: "SM",0,25,"SM",0,25,"SM",0,25 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<mem1>	String type; memory from which messages are read and deleted (commands List Messages +CMGL, Read Message +CMGR and Delete Message +CMGD); defined values: "SR" = Status Report message storage "SM" = SIM message storage
<mem2>	String type; memory to which writing and sending operations are made (commands Send Message from Storage +CMSS and Write Message to Memory +CMGW); refer to <mem1> for defined values
<mem3>	String type; memory to which received messages are preferred to be stored (unless class of message defines a specific storage location; refer to command New Message Indications +CNMI); refer to <mem1> for defined values
Notes	

AT+CSCA Service Center Address

AT+CSCA	Service Center Address
Command Function	Set command updates the SMSC address, through which mobile originated SMs are transmitted.
Syntax Query	AT+CSCA=?
Syntax	OK
Write Syntax	AT+CSCA=<"sca">,<tosca>
Write Response	+CSCA: <"sca">,<tosca> OK
Read Syntax	AT+CSCA?
Read Response	+CSCA="12063130004",145 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<"sca">	SMSC Address
<tosca>	SC address Type-of-Address
Notes	The service center address must be present to complete delivery of SMS. Most SIMs are delivered from the service provider with a service center already programmed into the SIM. A "+" should be entered in front of the sms address, but is not required by all operators.

AT+CSCB Select Cell Broadcast Message Types

AT+CSCB	Select Cell Broadcast Message Types
Command Function	Select which types of CBm's are to be received by the ME.
Syntax Query	AT+CSCB=?
Syntax	+CSCB: (0,1) OK
Write Syntax	AT+CSCB=<mode>
Write Response	OK
Read Syntax	AT+CSCB?
Read Response	+CSCB: 0,"<mids>","<dcss> " OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<mode>	0 = Message types specified in <MIDS> and <DCCS> are accepted 1 = Message types specified in <MIDS> and <DCCS> are not accepted
<mids>	string type; all different possible combinations of CBM message identifiers (refer <mid>) (default is empty string); e.g. "0,1,5,320-478,922"
<dcss>	string type; all different possible combinations of CBM data coding schemes (refer <dcs>) (default is empty string); e.g. "0-3,5"
Notes	An understanding of CBM message identifiers and CBM loading schemes is required to properly implement this command. Used in conjunction with AT+CNMI.

AT+CSDH Show Text Mode Parameters

AT+CSDH	Show Text Mode Parameters
Command Function	Determines if detail information is shown in result codes.
Syntax Query	AT+CSDH=?
Syntax	+CSDH: (0,1) OK
Write Syntax	AT+CSDH=<show>
Write Response	OK
Read Syntax	AT+CSDH?
Read Response	+CSDH: 1 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<show>	0 = Do not show header values 1= Show the values in result codes
Notes	N/A

AT+CSMP Set Text Mode Parameters

AT+CSMP	Set Text Mode Parameters
Command Function	Selects additional values needed when the SIM is sent to the network or placed in storage.
Syntax Query	AT+CSMP=?
Syntax	+CSMP: (0-255),(0-255),(0-255),(0-255) OK
Write Syntax	AT+CSMP=<fo>,<vp>,<pid>,<dcs>
Write Response	OK
Read Syntax	AT+CSMP?
Read Response	+CSMP: 17, 167, 0, 0 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<fo>	depending on the command or result code: first octet of GSM 03.40 SMS- DELIVER, SMS-SUBMIT (default 17), or SMS-COMMAND (default 2) in integer format
<vp>	depending on SMS-SUBMIT <fo> setting: GSM 03.40 TP-Validity-Period either in integer format (default 167)), in time-string format (refer <dt>), or if is supported, in enhanced format (hexadecimal coded string with quotes)
<pid>	Protocol-Identifier in integer format (default 0), refer GSM 03.40
<dcs>	SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme in integer format depending on the command or result code: GSM 03.38
Notes	N/A

AT+CSMS Select Message Service

AT+CSMS	Select Message Service
Command Function	Set command selects messaging service <service>. It returns the types of messages supported by the ME: <mt> for mobile terminated messages, <mo> for mobile originated messages and <bm> for broadcast type messages.
Syntax Query	AT+CSMS=?
Syntax	+CSMS: (0,1) OK
Write Syntax	AT+CSMS=<service>
Write Response	+CSMS: 0,1,1,1 OK
Read Syntax	AT+CSMS?
Read Response	+CSMS: 0,1,1,1 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<service>	0 = Phase 2 version 1 = Phase 2+ version
Notes	N/A

Message Commands

AT\$APIOPT Enable API Optional Header Fields

AT\$APIOPT	Enable API Optional Header Fields
Command Function	This command allows the user to enable specific Optional Header Fields to be included in the UDPAPI and TCPAPIs' API Optional Header. See Novatel Wireless GSM/GPRS Family API Reference (GSM0308UG001) for details.
Syntax Query	AT\$APIOPT=?
Syntax	\$APIOPT: (0-1),(0-1),(0-4),(0-1),(0-1),(0-1),(0-2),(0-1) OK
Write Syntax	AT\$APIOPT=<MDMID>,<Msg Event Format>,<Event Seq Num>,<HdrDisable>,<Output Event Type>,<HexModemID>,<DriverID>,<SendParam3>
Write Response	OK
Read Syntax	AT\$APIOPT?
Read Response	\$APIOPT=<MDMID>,<Msg Event Format>,<Event Seq Num>,<HdrDisable>,<Output Event Type>,<HexModemID>,<DriverID>,<SendParam3>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<MDMID>	0 = Disable sending of MDMID value in TCPAPI or UDPAPI Header 1 = Enable sending of MDMID value in TCPAPI or UDPAPI Header
<Msg Event Format>	0 = Disable sending of Output Message Event Format value in TCPAPI or UDPAPI Header 1 = Enable sending of Output Message Event Format in TCPAPI or UDPAPI Header
<Event Seq Num>	0 = Disable sending of Event Sequence Number value in TCPAPI or UDPAPI Header 1 = Enable sending of the least significant byte of the Event Sequence Number in TCPAPI or UDPAPI Header

AT\$APIOPT	Enable API Optional Header Fields
	<p>2 = Enable sending of the two least significant bytes of the Event Sequence Number in TCPAPI or UDPAPI Header</p> <p>3 = Enable sending of the three least significant bytes of the Event Sequence Number in TCPAPI or UDPAPI Header</p> <p>4 = Enable sending of the full four bytes of the Event Sequence Number in TCPAPI or UDPAPI Header</p>
<HdrDisable>	<p>0 = UDPAPI header is enabled (default)</p> <p>1 = UDPAPI header is disabled for UDP messages sent via event engine. The UDPAPI header will not be disabled if bit 18 (send this OTA message via SMS when GPRS services are not available) is set in parm2 of the \$event command that generates the message (see AT\$EVENT). This flag has no effect on commands sent from the server or the ack sequence. This feature is intended to be used with UDP messages when the size of the data packet is critical due to the rapid rate at which messages are sent over an extended period of time.</p>
<Output Event Type>	<p>0 = Disable sending of Output Event number in TCPAPI or UDPAPI Header</p> <p>1 = Enable sending of Output Event number in TCPAPI or UDPAPI Header</p>
<HexModemID>	<p>0 = Do not include the hex modem ID in the optional header</p> <p>1 = Include the hex modem ID in the optional header</p>
<DriverID>	<p>0 = Do not include Driver ID in the optional header</p> <p>1 = Include the least significant 4 bytes of the driver ID serial number in the optional header</p> <p>2 = Include the entire 8 bytes of the Driver ID in the optional header</p>

AT\$APIOPT	Enable API Optional Header Fields
<SendParam3>	<p>0 = Disable sending of Parameter 3 data in the optional header</p> <p>1 = Enable sending of Parameter 3 data in the optional header</p>
Notes	<p>When a message is formatted for transmission via the event engine (UDP, TCP, SMS, or serial), we call the function to retrieve/increment the sequence number. The sequence number is passed to the task that actually makes the decision about what to do with the message. If the message is SMS or serial, the sequence number doesn't actually get used in the end, but does get incremented.</p> <p>To support the hex modem ID feature, each MDMID character must be a decimal character between '0' and '9'. If the MDMID contains a character outside of this range, the hex MDMID will be the NULL string. If all MDMID characters are decimal characters, then the decimal MDMID is converted into the hexadecimal equivalent value.</p>
Examples	<p>This example will disable the sending of the MDMID, enable the Msg Event Format and enable the full Event Sequence Number.</p> <p>AT\$APIOPT=0,1,4</p> <p>This example will enable the sending of the MDMID and the least two significant bytes of the Event Sequence Number. The state of the Enable Msg Event Format will remain unchanged</p> <p>AT\$APIOPT=1,,2</p> <p>This example will enable the sending of the MDMID and disable the Msg Event Format. The state of the Event Seq Num will remain unchanged</p> <p>AT\$APIOPT=1,0</p> <p>Hex Modem ID Examples:</p> <p>AT\$APIOPT=0,,,,,1</p> <p>MDMID - "001036000211071"</p> <p>{07}{07}{F1}{36}{6C}{B0}{7F}</p> <p>MDMID - "99"</p> <p>{03}{07}{63}</p> <p>MDMID - "999999999999999999A"</p> <p>{03}{07}{00}</p>

AT\$APIPWD API Password

AT\$APIPWD	API Password
Command Function	This command allows the user to query/set the API password. Any IP address will be able to access the device if the password is not set (null). If the password is set, control is given to the last friend IP that supplied the correct password.
Syntax Query	AT\$APIPWD=?
Syntax	\$APIPWD: ("PASSWORD") OK
Write Syntax	AT\$APIPWD="<API password>"
Write Response	OK
Read Syntax	AT\$APIPWD?
Read Response	\$APIPWD: "<API password>"
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<API password>	Maximum of 8 characters. A NULL password indicates ALL remote users are allowed API access.
Notes	If APIPWD is set, the modem will require the correct password from a "friendly IP" (set by AT\$FRIEND command) before accepting any remote requests. Remote requests are only accepted from the last "friendly IP" that sent the correct password. If APIPWD is null, then all remote requests, from any IP address, will be accepted. The password is a maximum of 8 characters.

AT\$ATPASSWD Set Authorization For AT Commands For Serial, SMS And API

AT\$ATPASSWD	Set authorization for AT commands for serial, SMS and API								
Command Function	This command allows the user to enable or disable authorization for AT commands for the serial, SMS and API. It also sets the password required to run this command								
Syntax Query	AT\$ATPASSWD=?								
Syntax	AT\$ATPASSWD: ("oldpasswd",mask "newpasswd") OK								
Write Syntax	AT\$ATPASSWD= <"oldpasswd","newpasswd">								
Write Response	OK								
Read Syntax	N/A								
Read Response	N/A								
Execute Syntax Execute Response	AT\$ATPASSWD=<"passwd",mask>								
Unsolicited Response	N/A								
Response	N/A								
Parameter Values									
<oldpasswd>	Specified when the password is being changed.								
<newpasswd>	This is the value of the new password and is specified only when the password is being changed. It must be no more than eight characters in length and must be enclosed in double quotes.								
<passwd>	Specified when changing the AT command authorization mask.								
<mask>	<p>Bit mask specifying which interfaces will be authorized to enter AT commands. Each bit specifies one interface as enumerated in the table below.</p> <table> <thead> <tr> <th>Bit Value</th><th>Interface</th></tr> </thead> <tbody> <tr> <td>1</td><td>Serial Port</td></tr> <tr> <td>2</td><td>SMS</td></tr> <tr> <td>4</td><td>API</td></tr> </tbody> </table>	Bit Value	Interface	1	Serial Port	2	SMS	4	API
Bit Value	Interface								
1	Serial Port								
2	SMS								
4	API								

AT\$ATPASSWD	Set authorization for AT commands for serial, SMS and API
	To select multiple items to authorize, add the bit values of each interface to be authorized. To authorize API and SMS only, the mask value is 6 (4 + 2). AT commands entered over the serial port will not execute and will reply with ERROR.
Notes:	N/A
Example:	To set a password on a device that previously had no set \$ATPASSWD enter: AT\$ATPASSWD="", "1234" To change a previously set \$ATPASSWD password enter: AT\$ATPASSWD-D="1234", "5678"

AT\$CHKIN Configure Device Check-in

AT\$CHKIN	Configure Device Check-in
Command Function	This command adds event group 8 to the event table and configures the device check-in feature. The feature is used to send a wakeup type message to an alternate server (server other than the one the device normally reports). This alternate server is listed in the \$FRIEND list with a usage=4.
Syntax Query	AT\$CHKIN=?
Syntax	\$CHKIN: (0-1),(0-43200) OK
Write Syntax	AT\$CHKIN=<enable><periodic_interval>
Write Response	OK
Read Syntax	AT\$CHKIN?
Read Response	\$CHKIN: 1,43200 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<enable>	0 = remove group 8 from the event table. 1 = add event group 8 to the event table.

AT\$CHKIN	Configure Device Check-in
<periodic_interval>	Sets the periodic reporting interval (in minutes) Range: 0-43200 Default: 43200
Notes	Input event 200 is used for the periodic check-in timer. Output event 152 is used for sending UDP messages to the check-in servers specified in the \$FRIEND list. NOTE: Setting AT\$CHKIN=1 will overwrite any existing event group 8.
Example:	AT\$CHKIN=1,x adds event group 8 to the event table. AT\$CHKIN=0,x removes event group 8 from the event table.

AT\$FRIEND Modem Friends

AT\$FRIEND	Modem Friends
Command Function	This command allows the user to configure the modem friend/server list. A friend is always allowed remote API access. Friend servers can be configured to receive WAKEUP messages whenever the modem receives a new IP, or after a certain period has elapsed. (see AT\$WAKEUP)
Syntax Query	AT\$FRIEND=?
Syntax	\$FRIEND: (1-10),(0-2),"(0-255).(0-255).(0-255).(0-255)" ,(0-65535), (1,2,4) OK
Write Syntax	AT\$FRIEND =<friend number>,<server indication>,"<friend IP> or <DNS name>",<destination port>,<usage>
Write Response	OK
Read Syntax	AT\$FRIEND?
Read Response	\$FRIEND: =01, <server indication>,"<friend IP> or <DNS name>",<destination port>,<usage> \$FRIEND: =02, <server indication>,"<friend IP> or <DNS name>",<destination port>,<usage> \$FRIEND: =03, <server indication>,"<friend IP> or <DNS name>",<destination port>,<usage> \$FRIEND: =04, <server indication>,"<friend IP> or <DNS name>",<destination port>,<usage>

AT\$FRIEND	Modem Friends
	<p>\$FRIEND: =05, <server indication>,"<friend IP> or <DNS name>",<destination port>, <usage></p> <p>\$FRIEND: =06, <server indication>,"<friend IP> or <DNS name>",<destination port>, <usage></p> <p>\$FRIEND: =07, <server indication>,"<friend IP> or <DNS name>",<destination port>, <usage></p> <p>\$FRIEND: =08, <server indication>,"<friend IP> or <DNS name>",<destination port>, <usage></p> <p>\$FRIEND: =09, <server indication>,"<friend IP> or <DNS name>",<destination port>, <usage></p> <p>\$FRIEND: =10, <server indication>,"<friend IP> or <DNS name>",<destination port>, <usage></p>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<friend number>	friend identification (1-10).
<server indication>	<p>0 = Server is disabled.</p> <p>1 = Server is enabled.</p> <p>2 = Modem will accept and respond to incoming AT commands on this port as long as the source IP address matches the IP entry. A value of 255 can be entered for any octet of the IP address and will be treated as a wildcard that will match any value for the corresponding octet of the incoming IP address. Since this entry does not represent a specific IP address, no attempt to sent wakeup/event messages to this friend entry will be made.</p>
<friend IP>	friend IP value (including wildcard values of 255 if <server indication> = 2).
OR	
<DNS name>	friend DNS name
<destination port>	<p>Friend destination port.</p> <p>Note: If <usage> = 4, this parameter is used to configure the UDP port for the AT\$CHKIN command.</p>
<usage>	1 = TCPAPI

AT\$FRIEND	Modem Friends
	<p>2 = UDPAPI (default)</p> <p>4 = Alternate server for UDPAPI check-in message (see AT\$CHKIN)</p>
Notes	<p>The AT&F command does not modify the server address. It sets the usage parameter to the default value for all active servers. It clears the server indication and destination port fields.</p> <p>If the server indication is disabled for a friend server, then the UDP/TCP socket is not opened for communication. This action prevents the server from sending and receiving messages from the modem.</p>
Example	<p>AT\$FRIEND=9,2,"193.45.255.255",1735,2</p> <p>Would accept and respond to UDP AT commands on port 1735 from any IP address between 193.45.0.0 to 193.45.254.254. Wakeup and other outgoing messages would not be sent to these addresses (unless one of the addresses had a separate entry in the friends list).</p>

AT\$MDMID Modem ID

AT\$MDMID	Modem ID
Command Function	This command allows the user to query/set the modem ID. The modem ID is copied into each wakeup message sent from the modem. (see AT\$WAKEUP)
Syntax Query	AT\$MDMID=?
Syntax	\$MDMID: ("MODEM ID") OK
Write Syntax	AT\$MDMID = "<modem ID>"
Write Response	OK
Read Syntax	AT\$MDMID?
Read Response	\$MDMID: "<modem ID>"
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<modem ID >	0-20 character string in ASCII format.
Notes	The modem's Mobile Equipment Identifier (MEID) is used as the default modem ID.

AT\$MLQSZ Message Log Queue Size

AT\$MLQSZ	Message Log Queue Size
Command Function	The \$MLQSZ allows the user to restrict the number of unsent messages maintained in the buffers for the message log queues.
Syntax Query	AT\$MLQSZ=?
Syntax	\$MLQSZ:(0-3000),(0-3000),(0-3000),(0-3000),(0-3000),(0-3000) OK
Write Syntax	AT\$MLQSZ=<UdpQsize>,<SmsBckupQsize>,<SmsQsize>,<TcpQsize>,<UdpAckQsize>,<UdpAckSmsBckupQsize>
Write Response	OK
Read Syntax	AT\$MLQSZ?
Read Response	\$MLQSZ: <UdpQsize>,<SmsBckupQsize>,<SmsQsize>,<TcpQsize>,<UdpAckQsize>,<UdpAckSmsBckupQsize> OK
Execute Syntax	N/A
Execute Response	
Unsolicited Response	N/A
Parameter Values	
<UdpQsize>	Maximum # of unsent messages stored in message log queue for UDP messages. Valid range is 0-3000. The default is 0, which is treated as a special value indicating no message size restriction. This is the equivalent of restricting the size of this queue to 3000 messages.
<SmsBckupQsize>	Maximum # of unsent messages stored in message log queue for UDP messages where SMS messaging is allowed as a backup when UDP messaging is unavailable. Valid range is 0-3000. The default is 0, which is treated as a special value indicating no message size restriction. This is the equivalent of restricting the size of this queue to 3000 messages.
<SmsQsize>	Maximum # of unsent messages stored in message log queue for SMS messages. Valid range is 0-3000. The default is 0,

AT\$MLQSZ	Message Log Queue Size
	which is treated as a special value indicating no message size restriction. This is the equivalent of restricting the size of this queue to 3000 messages.
<TcpQsize>	Maximum # of unsent messages stored in message log queue for TCP messages. Valid range is 0-3000. The default is 0, which is treated as a special value indicating no message size restriction. This is the equivalent of restricting the size of this queue to 3000 messages.
<UdpAckQsize>	Maximum # of unsent messages stored in message log queue for UDP with Acknowledgement messages. Valid range is 0-3000. The default is 0, which is treated as a special value indicating no message size restriction. This is the equivalent of restricting the size of this queue to 3000 messages.

AT\$MLQSZ	Message Log Queue Size
<UdpAckSmsBckupQsize>	<p>Maximum # of unsent messages stored in message log queue for UDP with Acknowledgement messages where SMS messaging is allowed as a backup when UDP messageing is unavailable. Valid range is 0-3000. The default is 0, which is treated as a special value indicating no message size restriction. This is the equivalent of restricting the size of this queue to 3000 messages.</p>
Notes	<p>Over-the-air messages sent via the event engine are stored in flash and indexed via one of the message log queues. Due to indexing restrictions, no queue can contain more than 3000 unsent messages.</p> <p>For performance reasons, messages formatted via the event engine re stored in an array of 256 1000-byte flash files. Indexing for these messages is maintained in separate flash files (one for each queue).</p> <p>Normally, the number of unsent messages that can be stored in flash is a function of the size of the messages. For example, when storing messages containing only NMEA data, the message log files will be completely filled after about 2500 messages. Binary messages are typically smaller and take up less space in the message log files, but are still subject to the 3000 message maximum per queue.</p> <p>When the message log files are full OR when an individual queue exceeds 3000 messages, the oldest log file is deleted so that newer messages can be stored in a circular fashion using a new file in the place made available by deleting the oldest file. For some applications, the message buffers can contain far more unsent messages than is desired.</p> <p>The device only saves messages in the message log if the STORE_MSG (PARAM2 bit 6) is set. Wakeup messages and other messages which do not have the STORE_MSG bit set will not be stored in the message log. This is a change from the behavior of other Novatel Wireless devices. (GSM/GPRS devices will save some messages in the message log depending upon the network status even though the STORE_MSG bit is not set.)</p> <p>The purpose of this command is to mark older messages as 'sent' so that the number of messages in the queue never exceeds the threshold set by the user.</p> <p>Please note that the values specified in this command are not reflected in the value calculated for input event 61 (memory full percentage). That percentage represents the worst case (largest percentage) of either the % of the size of all unsent messages with respect to the size of all 256 log files OR the %</p>

AT\$MLQSZ	Message Log Queue Size
	<p>of unsent messages with respect to the 3000 messages allowed for an individual queue.</p> <p>This command is used in conjunction with MSGLOGDMP and allows the user to restrict the number of unsent messages maintained in the buffers for the message log queues. To dump the message the user needs to turn off the GPS receiver with the \$GPSCMD for those products which support GPS.</p>

AT\$MSGLOGCL Message Log Clear

AT\$MSGLOGCL	Message Log Clear
Command Function	The \$MSGLOGCL command erases the log file.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$MSGLOGCL
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	None
Notes	If AT&F is performed, the message log buffer will be cleared.

AT\$MSGLOGDMP Dump Unsent Messages To Serial Port

AT\$MSGLOGDMP	Dump Unsent Messages to Serial Port
Command Function	This command allows the user to dump the contents of the unsent messages to the serial port. This command is non-destructive in that it does not actually remove the messages from the queue
Syntax Query	AT\$MSGLOGDMP=?
Syntax	\$MSGLOGDMP: (0-5),(0-1),(1-83),(0-1) OK
Write Syntax	AT\$MSGLOGDMP=<queue>,<format>,<bytes_per_line>,<display_all>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
<queue>	<p>0 = event data that was configured to be sent to a remote server via UDP API only.</p> <p>1 = event data that was configured to be sent to a remote server via UDP API primarily but also use SMS as backup method if UDP is not available.</p> <p>2 = event data that was configured to be sent to a remote server via SMS only.</p> <p>3 = event data that was configured to be sent to a remote server via TCPAPI only.</p> <p>4 = event data that was configured to be sent to a remote server via UDP API with Acknowledgement messages.</p> <p>5 = event data that was configured to be sent to a remote server via UDP API with Acknowledgement messages primarily but also use SMS as backup method if UDP is not available</p>
<format>	0 = ASCII format (if message contains a byte that is not a printable ASCII character, it will be displayed as '?')

AT\$MSGLOGDMP	Dump Unsent Messages to Serial Port
	1 = hex format (Each byte in message is displayed as a two-digit hex character representing the value of the byte with spaces between each byte. Maximum of 16 bytes per line.)
<bytes_per_line>	1-83 (default = 16) number of bytes displayed per line for binary data (each byte is represented as a two-digit hex value followed by a space)
<display_all>	0 = display unsent messages only (default) 1 = display all messages (unsent and sent) from the indicated queue
Notes	<p>This command was developed primarily as a troubleshooting utility to help debug problems related to handling unsent messages in flash.</p> <p>However, it has also been useful in collecting GPS data when other memory storage is not available and it is not possible to connect the unit to a laptop. With this utility, you can put multiple devices in a vehicle for a drive test to collect NMEA data and dump the data for analysis easily when you return.</p> <p>GPS must be off to forward the data (on products that support GPS).</p> <p>When using larger bytes per line values (~30 and above), the user may need to issue the AT\$EVTOFF=1 command to successfully dump data via this command (AT\$MSGLOGDMP).</p>

AT\$MSGLOGEN Message Log Enable

AT\$MSGLOGEN	Message Log Enable
Command Function	The \$MSGLOGEN command has been created to enable or disable saving Event data generated via the event engine in modem's memory
Syntax Query	AT\$MSGLOGEN=?
Syntax	\$MSGLOGEN: (0-1) OK
Write Syntax	AT\$MSGLOGEN=<setting>
Write Response	OK
Read Syntax	AT\$MSGLOGEN?
Read Response	\$MSGLOGEN: <setting>
Execute Syntax	
Execute Response	
Unsolicited Response	N/A
Parameter Values	
<setting>	0 - 1 (possible valid values) 0 = Disable message logging (default). Event data is sent to the remote server upon occurrence. 1 = Enable message logging. Event data has to be read via AT\$MSGLOGRD command or when AT\$MSGLOGEN=0 is sent.
Notes	If AT\$MSGLOGEN command was enabled and any unsent messages exist in memory, then the unsent data will be sent to the remote server when data logging is disabled.

AT\$MSGLOGRD Message Log Read Data

AT\$MSGLOGRD	Message Log Read Data
Command Function	The \$MSGLOGRD command is used to query the status of the four event-engine message logs. Using the queue status this command can be used to resend messages that have already been sent and are still in the log.
Syntax Query	AT\$MSGLOGRD=?
Syntax	\$MSGLOGRD: (0-5),(0-2999),(0-2999) OK
Write Syntax	\$MSGLOGRD=<queue>,<number of messages>,<starting index>
Write Response	OK
Read Syntax	AT\$MSGLOGRD?
Read Response	<p>\$MSGLOGRD: 0, 0, 0, 0, 0, 0, 0, 0, 0,0,0</p> <p>OK</p> <p>AT\$MSGLOGRD? command returns 108 values:</p> <p>\$MSGLOGRD: udp1,udp2,udpsms1,udpsms2,sms1,sms2,tcp1,tcp2,udpak1,udpack2,udpacksms1,udpacksms2</p> <p>First pair of numbers: unsent UDP messages, total number of UDP messages in the UDP message log.</p> <p>Second pair of numbers: unsent UDP messages with SMS as backup, total number of UDP messages with SMS as backup in the UDP/SMS log.</p> <p>Third Pair of numbers: unsent SMS messages, total number of SMS messages in the SMS log.</p> <p>Fourth Pair of messages: unsent messages via TCP, total number of messages in the TCP log.</p> <p>Fifth pair of messages: UDP with Acknowledgement messages.</p> <p>Sixth pair of messages: UDP with Acknowledgement messages where SMS messaging is allowed as a backup when UDP messaging is unavailable.</p> <p>Each value is comma (,) delimited.</p> <p>The first value of any queue represents “Total Number of Unsent Messages”. This value can be used as the <number of messages> field while resending messages.</p>

AT\$MSGLOGRD	Message Log Read Data
	The second value of any queue represents: "Total Number of Messages Stored for that Queue". Subtract the "Total Number of Unsent Messages" from the "Total Number of Messages Stored for that Queue" and use that as the <starting index> to resend all of the messages still in the log.
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<queue>	<p>0 = event data that was configured to be sent to a remote server via UDP API only.</p> <p>1 = event data that was configured to be sent to a remote server via UDP API primarily but also use SMS as backup method if UDP is not available</p> <p>2 = event data that was configured to be sent to a remote server via SMS only</p> <p>3 = event data that was configured to be sent to a remote server via TCP API only</p> <p>4 = event data that was configured to be sent to a remote server via UDP API with Acknowledgement messages</p> <p>5 = event data that was configured to be sent to a remote server via UDP API with Acknowledgement messages primarily but also use SMS as backup method if UDP is not available</p>

AT\$MSGLOGRD	Message Log Read Data
<number of messages>	<p>x</p> <p>x = total number of messages one desires to read from the memory. A user can choose to read 1 message in which case x = 1 or the user can read all messages in which case x = the total number of messages available in the log (use the \$MSGLOGRD? command to determine the total number of messages available for the log of interest).</p> <p>Note: x cannot be greater than the total number of stored messages in the queue.</p>
<starting index>	<p>y</p> <p>y = starting index number of messages that are stored in the memory.</p> <p>NOTE: y cannot be greater than total number of stored messages for the log.</p>
Notes	<p>If AT&F is performed, the message log buffer will be cleared.</p> <p>The message logs are cleared when the modem id is changed (AT\$MDMID).</p> <p>The message logs work on a FIFO basis. I.e. when a log is full the oldest messages are deleted to make room for new messages.</p>

AT\$MSGSEND Message Send

AT\$MSGSEND	Message Send
Command Function	The \$MSGSEND command has been created to allow sending of data from one mode to another.
Syntax Query	AT\$MSGSEND=?
Syntax	AT\$MSGSEND: (0-5),("DATA") OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$MSGSEND=<destination>,<"data">
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	

AT\$MSGSEND	Message Send
<destination>	<p>0 - 5 (possible valid values)</p> <p>0 = <"data"> is sent out the primary serial port</p> <p>1 = <"data"> is sent to all SMS addresses listed in AT\$SMSDA command.</p> <p>2 = <"data"> is sent via UDP API to IP address and port number of the first UDP server listed in the AT\$FRIEND command</p> <p>3 = <"data"> is sent via PAD to IP address and Port number listed in the AT\$PADDEST command</p> <p>4 = <"data"> is sent via TCP API to IP address and port number of the first TCP server listed in the AT\$FRIEND command</p> <p>5 = <"data"> is sent out the secondary serial port</p>
<"data">	a maximum of 50 bytes ASCII characters
Notes	<p>Messages sent to OTA destinations (options 1, 2, 3, and 4) are transmitted immediately. If network coverage is not available, then the message is silently discarded. The message is not stored for later transmission when the modem returns to good network coverage.</p> <p>AT\$MSGSEND command can be sent to the device via SMS, UDP-API, or serial port.</p> <p>AT\$MSGSEND=4 checks for TCPAPI usage in the first \$FRIEND entry. AT\$MSGSEND=2 checks for UDPAPI usage in the first \$FRIEND entry. ERROR will be reported if invalid usage is selected.</p> <p>AT\$MSGSEND=4 checks if TCPAPI is enabled (AT\$TCPAPI=1) before attempting to send message. Will report error if not enabled.</p> <p>A carriage return can be added to a \$MSGSEND message by inserting "\OD" in to the text portion of the message</p> <p>For example: AT\$MSGSEND=0,"Hello \OD" OK Hello</p> <p>To add a carriage return to a \$STOATEV use the following format: AT\$STOATEV=1,AT\$MSGSEND=0,"Hello \OD"</p>

AT\$SMSDA Destination Address For SMS Messages

AT\$SMSDA	Destination Address for SMS Messages
Command Function	This command allows a user to configure the phone number or email address for the sending of event data. It is also used in limiting the originating address for sending AT commands over SMS.
Syntax Query	AT\$SMSDA=?
Syntax	\$SMSDA: (1-5),"+1234...", "+123.."
Write Syntax	AT\$SMSDA=<index>,<dest addr>,<gateway number>
Write Response	OK
Read Syntax	AT\$SMSDA?
Read Response	\$SMSDA: 1,"<dest addr>","<gateway number>", \$SMSDA: 2,"<dest addr>","<gateway number>", \$SMSDA: 3,"<dest addr>","<gateway number>", \$SMSDA: 4,"<dest addr>","<gateway number>", \$SMSDA: 5,"<dest addr>","<gateway number>", OK
Execute Syntax Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<index>	1 - 5 defines the index number for destination address

AT\$SMSDA	Destination Address for SMS Messages
<dest addr>	38 characters or less phone number or email address (Phone numbers must match exactly as they appear in the AT+CGML="ALL" command response.)
<gateway>	7 characters or less gateway number for email address
Notes	<p>The ability to limit AT Commands over SMS is now also controlled by AT#SMSDAEN.</p> <p>If AT\$SMSDAEN=1, (default) and if there are no addresses populated in AT\$SMSDA, then all SMS with the correct AT command format addressed to the MSISDN of the device, and with the correct MDMID (if populated) will be allowed.</p> <p>To disable all AT Commands over SMS, set AT\$SMSDAEN=0.</p> <p>The gateway number is provided by the Network Provider and is only used for sending email over SMS. It is not required if you are sending SMS to a phone number.</p> <p>An AT\$EVENT command has to be set to send a message over SMS.</p>

AT\$SMSDAEN Enable/Disable AT Commands Over SMS

AT\$SMSDAEN	Enable/Disable AT Commands over SMS
Command Function	This command allows the user to enable or disable the ability to allow AT commands over SMS
Syntax Query	AT\$SMSDAEN=?
Syntax	\$SMSDAEN: (0-1) OK
Write Syntax	AT\$SMSDAEN =<mode>
Write Response	OK
Read Syntax	AT\$SMSDAEN?
Read Response	AT\$SMSDAEN: <mode> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
< mode >	0 = Disables ability to send AT commands over SMS 1 = Enables the ability to send AT commands over SMS
Notes	<p>AT\$SMSDAEN is set to 1 by default. This allows SMS over AT commands to be sent to the modem. IF there is no entries in AT\$SMSDA, then all SMS with the correct AT command format, and addressed to the MSISDN of the device, and with the correct MDMID (if populated) will be allowed.</p> <p>AT\$SMSDAEN=0 will completely disable all AT COMMAND over SMS. Any SMS received, will be treated as normal SMS.</p> <p>To limit AT commands Over SMS to originating from a given address, ensure AT\$SMSDAEN=1 and populate the desired addresses in AT\$SMSDA.</p>
Example:	See App note GSM0308AN001- Sending AT Commands over SMS

AT\$UDPMSG Send And Receive UDP Messages

AT\$UDPMSG	Send and Receive UDP Messages
Command Function	<p>This command allows the user to send UDP/IP data packets while in AT command mode. The destination IP address and port number are set by the AT\$FRIEND command. The modem must have a network data connection established (\$areg=2 command setting). Incoming messages addressed to the modem's IP which have a valid header and are from an acceptable IP address (valid friend) will be displayed on the serial port with the unsolicited response \$UDPMSG: followed by the message.</p>
Syntax Query	AT\$UDPMSG=?
Syntax	<p>\$UDPMSG: (0-1),(0-2),("data"),(0-1)</p> <p>OK</p>
Write Syntax	<p>AT\$UDPMSG=<format>,<type>,<data>,<flash></p> <p><cr></p>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<format>	<p>0 = <data> is an ASCII string (i.e.: "is this is my data")</p> <p>1 = <data> is an ASCII-Hex bytes (i.e.: 050a25)</p>
<type>	<p>0 = message will only be sent to the first UDP server listed in AT\$FRIEND</p> <p>1 = message will be sent via the ACK method (controlled by \$ACKTM command) to the UDP server(s) listed in AT\$FRIEND</p> <p>2 = message will be sent to all UDP servers listed in AT\$FRIEND</p>

AT\$UDPMSG	Send and Receive UDP Messages
<data>	"ABCD" (Data to be transmitted in quotes) (NOTE: HEX format data shall always be entered as two ASCII characters per byte. ex: 0x5 should be entered as 05)
<flash>	<p>This optional parameter, when enabled, allows a user to store the message in the device's FLASH memory when the device is out of network coverage or not registered. Stored messages will be transmitted when the device reestablishes network data coverage.</p> <p>0 = Do not store messages in FLASH memory. 1 = Store messages in FLASH memory.</p>
Notes	<p>Data received from OTA shall be sent to the modem's serial port as: \$UDPMSG: <text> (ASCII or Binary data) (NOTE: Binary message will be displayed as two ASCII Hex characters)</p> <p><data> field from the at\$udpmsg command will be sent to UDP servers listed in AT\$FRIEND.</p> <p><data> sent or received OTA shall be appended with a 4-byte UDP-API header as follows:</p> <p>Bytes 0 - 1: First 2 bytes of <data> field Byte 2: 0x06 for ASCII data type or 0x07 for Binary data type Byte 3: reserved Byte 4 - n: <data> minus the first two bytes</p> <p>* A minimum of 2 and maximum of 244 ASCII characters are support. For HEX, a minimum of 2 and maximum of 122 bytes are supported.</p>

AT\$WAKEUP Modem To Server Wakeup/Keep Alive

AT\$WAKEUP	Modem to Server Wakeup/Keep Alive
Command Function	This command allows the user to configure the modem wakeup/keep alive parameters. These parameters control how the modem initiates contact with its server friends. Parameters can be selected so that a wakeup message sequence is executed every time the modem receives a new IP, and/or after a requested period has passed since the previous wakeup sequence has completed. A wakeup message sequence consists of sending <max retry> messages to each server friend in sequence (i.e. server 2 is contacted after all retries for server 1 is complete) and is complete when each server friend has received <max retry> messages, or upon receipt of an acknowledge message from a server.
Syntax Query	AT\$WAKEUP=?
Syntax	\$WAKEUP: (0-2),(0-10080) OK
Write Syntax	AT\$WAKEUP=<wakeup mode>,<retry period>
Write Response	OK
Read Syntax	AT\$WAKEUP?
Read Response	\$WAKEUP: <wakeup mode>,<retry period>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	

AT\$WAKEUP	Modem to Server Wakeup/Keep Alive
<wakeup mode>	<p>0 = No wakeup messages sent</p> <p>1 = Send one message upon receipt of new IP and every <retry period> minutes</p> <p>2 = send acknowledgement message using at\$acktm parameters upon receipt of new IP and every <retry period> minutes message</p>
<retry period >	The number of minutes for keep alive period. Zero indicates no retries.
Notes	<p>When this command is used, it will generate event group 0 events in the event table when the AT\$EVENT? command is issued.</p> <p>The <retry period> parameter of this command populates the event timer value when the AT\$EVTIM4? command is issued. The AT\$EVTIM value will be in seconds. The parameter will also generate additional event group 0 entries.</p> <p>If AT\$EVDEL=0 is issued or any entry for group 0 is deleted, this command MUST be re-entered for proper functionality. If a read command is issued, it will not reflect the true state of the AT\$WAKEUP setting.</p> <p>Wakeup messages are sent to the UDP servers specified in AT\$FRIEND.</p>

AT%SNCNT Query (or Reset) The Byte Counters (GPRS Only)

AT%SNCNT	Query (or Reset) the Byte Counters. (GPRS Only)
Command Function	Returns (or resets) the byte counts of every current connection.
Syntax Query	AT%SNCNT=?
Syntax	OK %SNCNT: (0)
Write Syntax	%SNCNT=<rst>
Write Response	OK
Read Syntax	AT%SNCNT?
Read Response	OK %SNCNT: <nsapi1>,<upo>,<dno>,<upp>,<dnpp><CR><LF> %SNCNT: <nsapi2>,<upo>,<dno>,<upp>,<dnpp><CR><LF>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<rst>	resets the counters if rst = 0
<nsapi>	connection id
<upo>	uplink octets count.
<dno>	downlink octets count.
<upp>	uplink packets count.
<dnpp>	downlink packets count.
Notes	<p>If multiple contexts are activated / deactivated, set/query will result in OK followed by byte counts (set command resets the counters to 0) for each connection.</p> <p>When AT%SNCNT? Is sent, the modem will immediately respond with OK, signifying the modem is ready to receive AT commands. If there is a current context activation, an unsolicited response will be returned to the serial port with the counter data.</p>

API Commands

TCP API Commands

AT\$TCPAPI TCP API Control

AT\$TCPAPI	TCP API Control
Command Function	This command allows the user to initiate and terminate and query the status of the TCP API connection. Please note that the TCP API can only be used over the air.
Syntax Query	AT\$TCPAPI=?
Syntax	\$TCPAPI: (0-1) OK
Write Syntax	AT\$TCPAPI=<Status>
Write Response	OK
Read Syntax	AT\$TCPAPI?
Read Response	\$TCPAPI: <Status> (M-<Mgr Task>,R-<Rec Task>,T-<Trans Task>,Idx <Friend Index>)
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<Status>	TCP API connection status 0=Disabled 1=Enabled
<Mgr Task>	TCP API Manager Task 0 = None 1 = Init 2 = Idle 3 = Connecting 4 = Connected 5 = Disconnecting
<Rec Task>	TCP API Receive Task 0 = None

AT\$TCPAPI	TCP API Control
	1 = Init 2 = Idle 3 = Connected 4 = Waiting for Header 5 = Waiting for Frame 6 = Processing API Command
<Trans Task>	TCP API Transmit Task 0 = None 1 = Init 2 = Idle 3 = Connected 4 = Sending
<Friend Index>	Friend Index (1 - 10, 255) Note: 255 = not connected
Notes	N/A

AT\$TCPIDLETO TCP API Idle Timeout

AT\$TCPIDLETO	TCP API Idle Timeout
Command Function	Specifies the number of seconds without data traffic, in either direction, before closing the connection.
Syntax Query	AT\$TCPIDLETO=?
Syntax	\$TCPIDLETO: (10-86400) OK
Write Syntax	AT\$TCPIDLETO=<Timeout>
Write Response	OK
Read Syntax	AT\$TCPIDLETO?
Read Response	\$TCPIDLETO: <Timeout>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<Timeout>	TCP API idle timeout value in seconds
Notes	After closing the connection, the device will attempt to reconnect using the FRIEND list.

AT\$TCPRESTR TCP API Restart

AT\$TCPRESTR	TCP API Restart
Command Function	If a connection exists, it is dropped and a new connection is attempted starting at the beginning of the Friend list.
Syntax Query	AT\$TCPRESTR=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$TCPRESTR
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	N/A

AT\$TCPRETRYTO TCP API Retry Timeout

AT\$TCPRETRYTO	TCP API Retry Timeout
Command Function	Specifies the number of seconds without receiving a TCP level ACK that will cause the connection to be closed.
Syntax Query	AT\$TCPRETRYTO=?
Syntax	\$TCPRETRYTO: (120-65535) OK
Write Syntax	AT\$TCPRETRYTO=<Timeout>
Write Response	OK
Read Syntax	AT\$TCPRETRYTO?
Read Response	\$TCPRETRYTO: <Timeout>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<Timeout>	TCP API retry timeout value in seconds
Notes	<p>After closing the connection, the device will attempt to reconnect using the FRIEND list. The purpose of this command is to provide an abort to the TCP stack level retries.</p> <p>Currently, the number of retries is 10 and the amount of time varies based on calculated round trip time. The minimum time allowed is 120 seconds.</p> <p>Attempts to set the retry timeout to a value less than 120 or more than 65535 will result in an error.</p>

AT\$TCPSRC TCP API Source Ports

AT\$TCPSRC	TCP API Source Ports
Command Function	Specifies the TCP API source port range used when making a TCPAPI connection.
Syntax Query	AT\$TCPSRC=?
Syntax	\$TCPSRC: (1024-65535),(1024-65535) OK
Write Syntax	AT\$TCPSRC=<Start Port Number>,[<End Port Number>]
Write Response	OK
Read Syntax	AT\$TCPSRC?
Read Response	\$TCPSRC: <Start Port Number>,<End Port Number>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<Start Port Number>	TCP API starting port number
<End Port Number>	TCP API ending port number
Notes	<p>Each connection attempt uses the next port number in sequence until the end port is passed. When this happens the port is set to the start port number.</p> <p>This current port number in use is retained over a power cycle.</p> <p>If only the start port number is provided, the end port number will be start port number + 49 (range of 50).</p> <p>The default start port number is 1024. The modem will increment the port number with each connection attempt until it reaches the default end port number of 65535. Once the modem reaches the end port number it will begin incrementing the ports again using the start port number of 1024.</p>

AT\$TCPSTATS TCP API Statistics

AT\$TCPSTATS	TCP API Statistics
Command Function	Displays bytes transmitted and received since last reset or last AT\$TCPSTATS=0 command.
Syntax Query	AT\$TCPSTATS=?
Syntax	\$TCPSTATS: (0) OK
Write Syntax	AT\$TCPSTATS=<Clear>
Write Response	OK
Read Syntax	AT\$TCPSTATS?
Read Response	\$TCPSTATS: Rx <Rx Bytes>,Tx <Tx Bytes>,M <Mode Changes>,D <Data Deactivates>,R <Restarts>,C <Connection Timeouts>,I <Idle Timeouts>,S <Socket Errors>,Rt<Retry Timeouts>,Rc<Reconnect Timeouts>, Dc<Disconnect Timeouts>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<clear>	0 = clear TCPAPI statistics
<Rx Bytes>	TCP API bytes received
<Tx Bytes>	TCP API bytes transmitted
<Mode Changes>	Counts the number of times the TCPAPI connection was closed due to configuration changes like AT\$TCPAPI, AT\$TCPSRC, and AT\$FRIEND.
<Data Deactivates>	Counts the number of times the TCPAPI connection was closed due to the loss of the network data connection.
<Restarts>	TCP API restarts (AT\$TCPRESTR)
<Connection Timeouts>	TCP API connection timeouts
<Idle Timeouts>	TCP API idle timeous.
<Socket Errors>	TCP API socket errors. These inclise connection refuses and socket read/write errors possibly caused by the TCP server friend.

AT\$TCPSTATS	TCP API Statistics
<Retry Timeouts>	The number of times a connection was closed due to Retry timer expirations.
<Reconnect Timeouts>	The number of times the reconnect timer expired. The reconnect timer restarts a TCPAPI connection when not connected and TCPAPI mode is enabled.
<Disconnect Timeouts>	The number of times the Disconnect timer expired while closing a TCPAPI connection for any reason.
Notes	AT\$TCPSTATS=0 will clear all TCP API statistics.

AT\$TCPURC Enable URC Over TCP API

AT\$TCPURC	Enable URC Over TCP API
Command Function	This command is used to enable and disable sending Unsolicited Response Codes over TCPAPI.
Syntax Query	AT\$TCPURC=?
Response	\$TCPURC: (0-1)
OK	
Write Syntax	AT\$TCPURC=<MODE>
Response	OK
Read Syntax	AT\$TCPURC?
Response	\$TCPURC: <MODE>
OK	
Execute Syntax	N/A
Response	N/A
Parameter Values	
<MODE>	0 = Disabled 1 = Enabled
Notes	

UDP API Commands

AT\$ACKTM Acknowledgment Message Period & Retry Number

AT\$ACKTM	Acknowledgment Message Period & Retry Number
Command Function	This command allows the user to configure the modem msg acknowledge behavior. If server acknowledgement is selected for a message, the message will be re-sent every <retry period> number of seconds until the acknowledge message sequence is complete, or until an acknowledge message is received from a server. An acknowledge message sequence consists of sending <max retry> messages to each server friend in sequence (i.e. server 2 is contacted after all retries for server 1 is complete) and is complete when each server friend has received <max retry> messages, or upon receipt of an acknowledge message from a server.
Syntax Query	AT\$ACKTM=?
Syntax	\$ACKTM: (1-255),(0-3600),(0-1) OK
Write Syntax	AT\$ACKTM=<max retry>,<retry period>,<IP reselect>
Write Response	OK
Read Syntax	AT\$ACKTM?
Read Response	\$ACKTM: <max retry>,<retry period >,<IP reselect> OK
Execute Syntax	N/A
Execute Response	
Unsolicited Response	N/A
Parameter Values	
<max retry>	<p>The maximum number of times an acknowledge message is re-sent to a single friend server. After all retries to the friend server are exhausted, the modem will move on to the next friend server if one exists. If there are no more friend servers available, the message will be discarded.</p> <p>In the case of the default acknowledge wakeup message: The maximum number of wakeup messages the modem will send to each server friend upon receipt of a new IP, or upon expiration of</p>

AT\$ACKTM	Acknowledgment Message Period & Retry Number
	each keep-alive period. Zero indicates no wakeup message should be sent.
<retry period >	The number of seconds between successive message retries. Zero indicates no retries.
<IP reselect>	0 = IP reselection is OFF. 1 = If an acknowledge message has not been received after all friend servers and retries for the message are exhausted, assume a problem with round-trip communication and initiate IP re-selection.
Notes	
Examples	<p>AT\$ACKTM=5,5,1 ——— Perform IP reselect if no ACK from FRIENDS</p> <p> └── Transmit messages every 5 seconds</p> <p> └── Transmit 5 messages total</p> <p>AT\$WAKEUP time between AT\$ACKTM sequence</p> <p> 5 sec 5 sec 5 sec 5 sec 5 sec </p> <p> └── AT\$ACKTM sending 5 messages, 5 seconds apart</p>

PAD Commands

AT\$ACTIVE TCP PAD State

AT\$ACTIVE	TCP PAD State
Command Function	This command determines the active or passive state of the TCP PAD connection.
Syntax Query _	AT\$ACTIVE=?
Syntax	\$ACTIVE: (0-1) OK
Write Syntax	AT\$ACTIVE =<state >
Write Response_	OK
Read Syntax	AT\$ACTIVE?
Read Response	\$ACTIVE: <state>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<state>	0 = TCP PAD passive/server mode 1 = TCP PAD active/client mode (default)
Notes	If passive is chosen, the PAD will be in server mode and listen for inbound TCP connection requests. If active is chosen, the PAD will be in client mode and will initiate a connection based on the values populated in AT\$PADDST. A value of 0 indicates passive, server mode of operation. A value of 1 indicates active, client mode of operation. The PAD server and client are started using ATDT, ATD#777 or AT\$AREG=2.
Example	at\$active=0 OK at\$hostif=2 OK atdt OK LISTEN

AT\$CONNTO TCP PAD Connection Timeout

AT\$CONNTO	TCP PAD Connection Timeout
Command Function	This command is used to indicate the amount of time, in seconds, to spend attempting to make a TCP connection.
Syntax Query	AT\$CONNTO=?
Syntax	\$CONNTO: (0,10-3600) OK
Write Syntax	AT\$CONNTO =<timeout>
Write Response	OK
Read Syntax	AT\$CONNTO?
Read Response	\$CONNTO: <timeout>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<timeout>	0 = Infinite timeout value 10-3600 = timeout value in seconds
Notes	A value of 0 will indicate infinite connection wait time. This command pertains to client mode operation only.

AT\$IDLETO TCP PAD Idle Timeout

AT\$IDLETO	TCP PAD Idle Timeout
Command Function	This command sets the length of time, in seconds, a TCP session connection will remain active without the remote connection sending any data.
Syntax Query	AT\$IDLETO=?
Syntax	\$IDLETO: (10-86400) OK
Write Syntax	AT\$IDLETO =<timeout>
Write Response	OK
Read Syntax	AT\$IDLETO?
Read Response	\$IDLETO: <timeout>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<timeout>	10-86400 = timeout value in seconds
Notes	<p>If no communication is received from the remote connection in the specified time, the modem will gracefully attempt to close the connection.</p> <p>Carrier networks may shut down a TCP connection if the connection is idle.</p>

AT\$PADBLK PAD Block Size

AT\$PADBLK	PAD Block Size
Command Function	This command allows the user to query/set the PAD block size.
Syntax Query	AT\$PADBLK=?
Syntax	PADBLK: (3-1472) OK
Write Syntax	AT\$PADBLK =<block size >
Write Response	OK
Read Syntax	AT\$PADBLK?
Read Response	\$PADBLK: <block size>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<block size >	PAD data will be created at the requested PAD block size (number of bytes) unless an enabled forward character or PAD timeout forces the data to be sent out at a smaller block size. Block size does NOT include the IP or TCP/UDP header size. Block size values over 1460 are truncated to 1460 for TCP PAD. Values over 1460 are only applicable to UDP PAD.
Notes	The AT\$PADBLK sets the buffer size for accumulating the chars received on the serial port by the modem. However, the modem uses a fixed 500 char buffer for sending data over-the-air, so when the \$PADBLK is set to a value >500, the data is sent over the air in 500 char blocks.

AT\$PADBS PAD Backspace Character

AT\$PADBS	PAD Backspace Character
Command Function	This command allows the user to query/set the PAD backspace character. If PAD edit is enabled via AT\$PADCMD, this character will cause the previous character to be deleted from the PAD output buffer. If the previous character has already been forwarded due to a PAD timeout or receipt of an enabled forward character, receipt of the PAD edit character will have no effect.
Syntax Query	AT\$PADBS=?
Syntax	\$PADBS: (0-FF) OK
Write Syntax	AT\$PADBS =<backspace character>
Write Response	OK
Read Syntax	AT\$PADBS?
Read Response	\$PADBS: <backspace character>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<backspace character>	Hex representation of user selected backspace character. Normal backspace character is 08.
Notes	N/A

AT\$PADCMD PAD Command Features

AT\$PADCMD	PAD Command Features
Command Function	This command allows the user to set/query PAD configuration options.
Syntax Query	AT\$PADCMD=?
Syntax	\$PADCMD: (0-FFFF) OK
Write Syntax	AT\$PADCMD =<pad feature select >
Write Response	OK
Read Syntax	AT\$PADCMD?
Read Response	\$PADCMD: "<pad feature select >"
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<pad feature select >	AND selected HEX options into a single 16 bit word. 0001 = Enable forwarding on special char 0002 = Forward special char with data 0008 = Enable backspace 0400 = Enable escape character to treat next character as data
Notes	A +++ is an escape sequence to exit PAD mode. Disabling of the escape sequence is not supported, however the escape is only applicable when there is a 1 second guard time before and after the +++. If the guard period is not met before and after the escape sequence, it will be forwarded as data.

AT\$PADDISC PAD Disconnect Method Selection

AT\$PADDISC	PAD Disconnect Method Selection
Command Function	This command sets the PAD '+++' disconnect method to Legacy or Enabler III (new). The new method emphasizes retaining the IP data session for as long as possible; only client or server timeouts remove the connection. Also, ATH and ATH have roles in controlling the PAD connection when using this method.
Syntax Query	AT\$PADDISC=?
Syntax	\$PADDISC: (0,1) OK
Write Syntax	AT\$PADDISC =<method>
Write Response	OK
Read Syntax	AT\$PADDISC?
Read Response	\$PADDISC: <method> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	

AT\$PADDISC	PAD Disconnect Method Selection
< method >	<p>0 = Legacy method (Do not buffer rx data)</p> <p>1 = Enabler III method (Buffer rx data)</p>
Notes	<p>When in AT\$PADDISC=1, when you enter +++ or when the TCP socket is closed from the remote server, the device goes into command mode, but maintains the current IP data session. ATH to is used to close the IP data session. ATO (or ATD*99# or ATD#777) is used to go back into connect mode. This will automatically try to connect the TCP socket.</p> <p>Note: ATD*99# for GSM and ATD#777 for CDMA Modems.</p> <p>GSM Modems Only: ATD*99**1# and ATD*99****2# will return error and should not be used to reconnect. ATH must be entered prior to re using these commands to disconnect the PDP context activation.</p> <p>When AT\$PADDISC=1 is set and when the DTR signal is asserted an AT&D2 setting will act as if AT&D1 is set instead. You will get an OK and be in command mode. The device will maintain the data connection and ATO can be used to get back to the PAD data connection.</p>
Examples	<pre> AT\$PADDISC=1,1 OK AT\$PADDISC? \$PADDISC: 1,1 OK AT\$PADDISC=0,1 ERROR AT\$PADDISC? \$PADDISC: 1,1 OK AT\$PADDISC=0 OK AT\$PADDISC? \$PADDISC: 0,0 OK AT\$PADDISC=, ERROR AT\$PADDISC? </pre>

AT\$PADDISC	PAD Disconnect Method Selection
	\$PADDISC: 0,0 OK AT\$PADDISC=,0 ERROR AT\$PADDISC? \$PADDISC: 0,0

AT\$PADDST PAD Destination IP/Port

AT\$PADDST	PAD Destination IP/Port
Command Function	This command allows the user to query/set the PAD destination IP and port address.
Syntax Query	AT\$PADDST=?
Syntax	\$PADDST: "(0-255),(0-255),(0-255),(0-255)",(0-65535) OK
Write Syntax	AT\$PADDST ="<PAD destination IP> or <PAD destination DNS name>",<PAD destination port>
Write Response	OK
Read Syntax	AT\$PADDST?
Read Response	\$PADDST: ="<PAD destination IP> or <PAD destination DNS name>",<PAD destination port>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<PAD destination IP >	Destination IP for PAD data. PAD data is sent to and received from this IP. Do not use IP = 0.0.0.0.
OR	
<PAD destination DNS name>	Destination DNS name for PAD data.
<PAD destination port >	Destination port for PAD data. PAD data is sent to and received from this port. Do not use port = 0
Notes	A value of 0 will allow any IP/port access to the TCP PAD. You will use either the PAD Destination IP Address, or the PAD Destination DNS Name, but not both.

AT\$PADESC PAD Escape Character

AT\$PADESC	PAD Escape Character
Command Function	This command allows the user to query / set the PAD escape character. If PAD escape is enabled via AT\$PADCMD, receipt of this character will cause the following character to be treated as data. It is typically used to allow the forward, backspace or escape character to be processed as data rather than as a special character.
Syntax Query	AT\$PADESC=?
Syntax	\$PADESC: (0-FF) OK
Write Syntax	AT\$PADESC=<escape character>
Write Response	OK
Read Syntax	AT\$PADESC?
Read Response	\$PADESC: <escape character>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<escape character>	Hex representation of user selected escape character. Default escape character is 00
Notes	N/A

AT\$PADFWD PAD Forward Character

AT\$PADFWD	PAD Forward Character
Command Function	This command allows the user to query/set the PAD forward character. If PAD forward is enabled via AT\$PADCMD, receipt of this character will immediately forward all currently buffered PAD data.
Syntax Query	AT\$PADFWD=?
Syntax	\$PADFWD: (0-FF) OK
Write Syntax	AT\$PADFWD =<forward character>
Write Response	OK
Read Syntax	AT\$PADFWD?
Read Response	\$PADFWD: <forward character>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<backspace character>	Hex representation of user selected forward character. Default forward character is 0D (Carriage return).
Notes	N/A

AT\$PADSRC PAD Source Port

AT\$PADSRC	PAD Source Port
Command Function	This command allows the user to query/set the API PAD source port. Remote data received from a valid destination address to this source port will be processed as incoming PAD data. This port is also used as the source port for all data sent to the PAD destination.
Syntax Query	AT\$PADSRC=?
Syntax	\$PADSRC: (0-65535) OK
Write Syntax	AT\$PADSRC = <PAD source port>
Write Response	OK
Read Syntax	AT\$PADSRC?
Read Response	\$PADSRC: <PAD source port>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<PAD source port >	PAD source port is used as the source port in all outgoing PAD data messages. The remote host must use this port number as the destination port for PAD data sent to the device.
Notes	Do not use AT\$PADSRC=0 for UDP PAD. You can use PADSRC=0 for TCP PAD, but not for UDP PAD.

AT\$PADTO PAD Timeout Value

AT\$PADTO	PAD Timeout Value
Command Function	This command allows the user to query/set the PAD timeout value. Data will be forwarded to the PAD destination even if the PAD block size has not been reached if <pad timeout> period has elapsed since the last PAD character was received from the local host.
Syntax Query	AT\$PADTO=?
Syntax	\$PADTO: (0-65535) OK
Write Syntax	AT\$PADTO=<PAD timeout>
Write Response	OK
Read Syntax	AT\$PADTO
Read Response	\$PADTO: <PAD timeout>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<PAD timeout>	The number of tenths of seconds to wait for the receipt of more PAD data before forwarding the currently accumulated PAD buffer to the PAD destination. A value of zero disables the PAD timeout feature. If the PAD timeout feature is disabled, no data will be forwarded to the destination until either an enabled forward character is received, or the selected PAD buffer size is reached. (50 = 5 seconds)
Notes	N/A

ATDP Dial Command For UDP PAD

ATDP	Dial Command for UDP PAD
Command Function	This command is used to invoke the UDP PAD via a dial command.
Syntax Query	N/A
Syntax	N/A
Write Syntax	(Using IP Address) ATDP<IP_ADDRESS>/<UDP Port Number> (Using DNS Name) ATDP"<PAD Destination DNS_Name>",<UDP Port Number>
Write Response	Connect
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<IP_ADDRESS>	IP Address of the destination host. Or,
<PAD Destination DNS_Name>	DNS Name of the destination host.
<UDP Port Number>	UDP Port number. If no UDP port number is required, a value zero (0) should be specified here.
Notes	This command will override the AT\$PADDST settings for the current connected session.
Example:	ATDP123.456.789.1/0 ATDP 123.456.789.2/3000 ATDP"www.novatelwireless.com",0 ATDP"www.novatelwireless.com",3000

ATDT Dial Command For TCP PAD

ATDT	Dial Command for TCP PAD
Command Function	This command is used to invoke the TCP PAD via a dial command.
Syntax Query	N/A
Syntax	N/A
Write Syntax	(Using IP Address) ATDT<IP_ADDRESS>/<TCP Port Number> (Using DNS Name) ATDT"<PAD Destination DNS_Name>",<TCP Port Number>
Write Response	Connect
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<IP_ADDRESS>	IP Address of the destination host. Or,
<PAD Destination DNS_Name>	DNS Name of the destination host.
<TCP Port Number>	TCP Port number. If no TCP port number is required, a value zero (0) should be specified here.
Notes	This command will override the AT\$PADDST settings for the current connected session.
Example:	ATDT123.456.789.1/0 ATDT123.456.789.2/3000 ATDT"www.novatelwireless.com",0 ATDT"www.novatelwireless.com",3000

FTP Commands

AT\$ATEXEC Execute AT Command File

AT\$ATEXEC	Execute AT Command File
Command Function	This command is used to execute an AT command file that is stored in FFS.
Syntax Query	AT\$ATEXEC =?
Response	\$ATEXEC: "filename", (0-2) OK
Write Syntax	AT\$ATEXEC =<"FILENAME ">,<OPTION>
Response	OK
Read Syntax	AT\$ATEXEC?
Response	\$ATEXEC: <"FILENAME">,<STATUS> OK
Execute Syntax	N/A
Response	N/A
Unsolicited Response	<p>The modem returns two responses after the command to run the script has been issued. The first response is an immediate acknowledgement of the command, either OK (if the command was entered correctly) or ERROR (if the command was not entered correctly). After the script has completed, the modem returns an Unsolicited Result Code (URC) indicating either success or the reason for the error.</p> <p>The following URCs may be returned:</p> <p>\$ATEXEC OK</p> <p>\$ATEXEC FAIL</p> <p>\$ATEXEC FILE OPEN ERROR</p> <p>\$ATEXEC FILE READ ERROR</p> <p>\$ATEXEC AT CMD ERROR, Line n (Where n is the line number of the first error in the script file)</p> <p>\$ATEXEC BUSY ERROR</p>
Parameter Values	
<"FILENAME">	<p>Name of file to execute</p> <p>Maximum length is 15 characters.</p>

AT\$ATEXEC	Execute AT Command File
<OPTION>	AT command execution option 0 = Run To Completion 1 = Stop on Error 2 = Stop on Error and Reset Modem
<STATUS>	Status from Executing File 0 = Ok 1 = Error 2 = Open File Error 3 = File Read Error 4 = AT Command Error 5 = Busy 6 = Command Length Exceeded 7 = Retries Exceeded
Notes	AT\$FTPGET or AT\$FFS can be used to store files into the FFS.

AT\$FFS Generic Flash File System Access

AT\$FFS	Generic Flash File System Access
Command Function	This command provides generic file read and write functionality to the embedded FFS in the Novatel Wireless modem.
Syntax Query	AT\$FFS=?
Response	\$FFS: (0-6,86),"filename",(0-524287),(0-100),("ASCII-HEX")
Write Syntax	AT\$FFS=<op>,<filename>,<seek>,<length>, <data>
Response	<p>The device response varies by <op></p> <p>Response for Write (<op> = 0): OK</p> <p>Response for Read (<op> = 1): \$FFS: <data> OK</p> <p>Response for Delete (<op> = 2): OK</p> <p>Response for Directory (<op> = 3): \$FFS [<filename>] [<filename>] [...] OK</p> <p>Response for Directory and size (<op> = 4): \$FFS: [<file size> <filename>] [<file size> <filename>]</p>

AT\$FFS	Generic Flash File System Access
	<p>[...]</p> <p>Response for Free and used space (<op> = 5): \$FFS: <free_bytes> Free Bytes, <used_bytes> Used Bytes</p> <p>Response for Delete All (<op> = 86): OK</p>
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<op>	FFS Operation 0 = write 1 = read 2 = delete 3 = directory 4 = directory with file size 5 = FFS free space and used space 6 = Output flash device name 86 = delete all files
<filename>	The filename in double quotes (i.e. "test.txt") Maximum length is 15 characters. Filename parameter is required for the write (0), read (1), and delete (2) operations.
<seek>	The position in the file to read or write given as a byte offset. Seek parameter is required for the write (0) and read (1), operations. Range: 0 - 524287.
<length>	The number of bytes to read or write.

AT\$FFS	Generic Flash File System Access
	Length parameter is only required for read and write operations. Range: 0 - 100
<data>	Only applicable to write operations as an input parameter. Also defines the output data format for the read operation. Limited to 100 bytes (200 characters). Data is encoded in ASCII hex (i.e. 0x12, 0x34, 0xab would be entered as "1234ab")
Notes	
Examples	<p>AT\$FFS=0,"test",0,8,"0102030405060708"</p> <p>OK</p> <p>AT\$FFS=1,"test",0,8</p> <p>\$FFS:</p> <p>0102030405060708</p> <p>OK</p> <p>AT\$FFS=3</p> <p>\$FFS:</p> <p>test</p> <p>OK</p> <p>AT\$FFS=4</p> <p>\$FFS:</p> <p>8 test</p> <p>OK</p> <p>AT\$FFS=5</p> <p>\$FFS: 675308 Free Bytes, 76324 Used Bytes</p> <p>OK</p> <p>AT\$FFS=2,"test"</p> <p>OK</p>

AT\$FFS	Generic Flash File System Access
	AT\$FFS=86 OK

AT\$FTPABORT Aborts Current Data Operation With FTP Server

AT\$FTPABORT	Aborts Current Data Operation with FTP Server
Command Function	Interrupts the current data operation with the FTP server.
Syntax Query	AT\$FTPABORT=?
Response	OK
Write Syntax	N/A
Response	N/A
Read Syntax	AT\$FTPABORT?
Response	ERROR
Execute Syntax	AT\$FTPABORT
Response	OK
Parameter Values	N/A
Notes	If a data operation is not in operation, no action is performed. If a connection to an FTP server is not active, FTP INVALID CLIENT is returned.

AT\$FTPCFG Configure FTP Parameters

AT\$FTPCFG	Configure FTP parameters
Command Function	Configures FTP parameters required to open connection to FTP Server
Syntax Query	AT\$FTPCFG=?
Syntax	AT\$FTPCFG: "host", (0-65535), "username","password" OK
Write Syntax	AT\$FTPCFG=<host>,<portnum>,<username>,<password>
Write Response	OK
Read Syntax	AT\$FTPCFG?
Read Response	AT\$FTPCFG: <host>, <port>,<username>,<password>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<host>	Fully qualified domain name or dotted-decimal notation IP address of FTP server, character string up to 63 characters
<portnum>	FTP server port number, 0 – 65535
<username>	FTP server user name, character string up to 31 characters
<password>	FTP server password, character string up to 31 characters
Notes	AT\$FTPCFG must be entered initially before opening connection to FTP server. Configuration information will be saved to flash when flash write command is executed and will be re-used on subsequent FTP connections.

AT\$FTPCHDIR Change Current Working Directory

AT\$FTPCHDIR	Change current working directory
Command Function	Changes the current working directory on the FTP server.
Syntax Query	AT\$FTPCHDIR=?
Syntax	\$FTPDIR: "directory" OK
Write Syntax	AT\$FTPCHDIR=<directory>
Write Response	OK
Read Syntax	AT\$FTPCHDIR?
Read Response	ERROR
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<directory>	Directory name on remote FTP server
Notes	AT\$FTPCHDIR can only be entered after the connection to the FTP server has been established. To navigate up a directory, use the ".." directory notation.

AT\$FTPCLOSE Closes The Connection To The FTP Server

AT\$FTPCLOSE	Closes the Connection to FTP Server
Command Function	Closes the current connection with the remote FTP server.
Syntax Query	AT\$FTPCLOSE=?
Response	OK
Write Syntax	N/A
Response	N/A
Read Syntax	AT\$FTPCLOSE?
Response	ERROR
Execute Syntax	AT\$FTPCLOSE
Response	OK
Parameter Values	N/A
Notes	This command is only available when a connection to the FTP server is active. If a connection to an FTP server is not active, FTP INVALID CLIENT is returned.

AT\$FTPDIR Directory Listing

AT\$FTPDIR	Directory Listing
Command Function	Prints a directory listing of the current working directory on the FTP server
Syntax Query	AT\$FTPDIR=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$FTPDIR?
Read Response	OK \$FTPDIR: <current directory information>
Execute Syntax	AT\$FTPDIR
Execute Response	OK <directory listing information>
Unsolicited Response	N/A
Parameter Values	N/A
Notes	AT\$FTPDIR can only be entered after the connection to the FTP server has been established. Directory listing information may be delayed due to the latency of the data connection to the FTP server.

AT\$FTPGET Retrieve A Remote File

AT\$FTPGET	Retrieve a Remote File
Command Function	Retrieves a remote file from the FTP server for either output on the serial port or storage to the local flash file system.
Syntax Query	AT\$FTPGET=?
Syntax	\$FTPGET: "remotefile","localfile" OK
Write Syntax	AT\$FTPGET=<remotefile>,<localfile>
Write Response	OK
Read Syntax	AT\$FTPGET?
Read Response	\$FTPGET: <remotefile>,(SERIAL, <localfile>),<output>/<available>,<eof>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<remotefile>	File name on the remote FTP server.
<localfile>	File name to use for storage of the retrieved file in the local flash file system. Note: the local filename length is limited to 15 characters.
<output>	Number of bytes which have been transferred out the serial port
<available>	Number of bytes of file which are available for output to the serial port
<eof>	0 = file currently being transferred 1 = complete file has been transferred to FTP client
Notes	If local file is not specified, the remote file will be maintained in memory buffers until a subsequent FTP read request is performed to output a block of bytes onto the serial port. As the file is transmitted out the serial port, the FTP client will refill the memory buffers with additional file data from the FTP server.

AT\$FTPOPEN Opens FTP Connection

AT\$FTPOPEN	Opens FTP Connection
Command Function	Opens FTP control connection to FTP server
Syntax Query	AT\$FTPOPEN=?
Syntax	\$FTPOPEN: ("ACTIVE,"PASSIVE") OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$FTPOPEN?
Read Response	OK \$FTPOPEN: <status>
Execute Syntax	AT\$FTPOPEN="<mode>"
Execute Response	OK <status>
Unsolicited Response	N/A
Parameter Values	
<mode>	ACTIVE or PASSIVE Mode is an optional parameter. If not specified, the FTP connection will be in the ACTIVE mode.
<status>	FTP CONNECTION OPEN FTP CONNECTION CLOSED FTP STACK ERROR Status will display the state of the control connection with the remote FTP server.
Notes	AT\$FTPOPEN must be entered after FTP configuration information has been entered. If any FTP configuration information has been saved to flash, it will be used to open the connection to the FTP server. After the FTP open completes successfully, FTP CONNECTION OPEN will be printed, otherwise an error string will be printed.

AT\$FTPPUT Store A Local File On The FTP Server

AT\$FTPPUT	Store a Local File On the FTP Server
Command Function	Stores a local file from the Flash File System onto the remote FTP server.
Syntax Query	AT\$FTPPUT=?
Response	\$FTPPUT:"remotefile","localfile" OK
Write Syntax	AT\$FTPPUT=<remotefile>,<localfile>
Response	OK
Read Syntax	AT\$FTPPUT?
Response	\$FTPPUT:<remotefile>,<localfile>,<totalWrote>/<totalSize>,<eof>
Execute Syntax	N/A
Response	N/A
Parameter Values	
<remotefile>	File name on the remote FTP server.
<localfile>	File name on the local Flash File System.
<totalWrote>	Number of bytes of file which have been written to FTP Server
<totalSize>	Size of file to be transferred to FTP Server (in bytes).
<eof>	0 = file is currently being transferred 1 = complete file has been transferred to FTP Server
Notes	

AT\$FTPRST Restart The Last FTP GET Operation

AT\$FTPRST	Restart the Last FTP GET Operation
Command Function	Manual restart of an FTP GET file transfer from the last completed point in the file.
Syntax Query	N/A
Response	N/A
Write Syntax	AT\$FTPRST=<offset>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<offset>	Number of bytes into the file to resume file transfer. (Optional)
Notes	<p>AT\$FTPRST will attempt to resume the last incomplete file transfer from the last point in the file successfully read. Offset is not required unless the automatically computed offset is to be overridden. The AT\$FTPRST command requires an RFC3659 compliant FTP server which implements the FTP REST command. AT\$FTPRST is not designed to work over a system restart.</p> <p>The user's current path must contain the file prior to issuing AT\$FTPRST or else the AT\$FTPRST command will fail.</p> <p>The only time it is necessary to send the \$FTPRST command is if a "FTP TIMEOUT" URC is received during a FTP transfer. The "FTP TIMEOUT" is typically caused by the loss of the network data connection for more than the FTP idle timeout, 60 seconds.</p>

RTC Commands

AT\$RTCALRM Real Time Clock Alarm

AT\$RTCALRM	Real Time Clock Alarm
Command Function	This command handles the setting and querying of the RTC alarm registers. When the alarm feature has been enabled the \$EVENT engine will be invoked upon the going off. If the \$RTCWAKE call is invoked following the alarm feature setup the modem will power back up automatically upon the alarm going off. The actions of these two features are mutually exclusive of each other, so one or the other will occur but not both.
Syntax Query	AT\$RTCALRM=?
Syntax	\$RTCALRM: (0-99),(1-12),(1-31),(0-23),(0-59),(0-59),(0-527040) OK
Write Syntax	AT\$RTCALRM= <rtc_year>,<rtc_month>,<rtc_day>,<rtc_hour>,<rtc_min>,<rtc_sec>,<rtc_alarmTimeinMinutes>
Write Response	OK
Read Syntax	AT\$RTCALRM?
Read Response	\$RTCALRM: <rtc_enabled>,<rtc_year>,<rtc_month>,<rtc_day>,<rtc_hour>,<rtc_min>,<rtc_sec>,<rtc_alarmTimeinMinutes>” OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	Parameters are positional dependent, any parameter may be omitted with the use of the comma (’,’) as a place holder on command line. If a parameter is omitted then the current value in the hardware is used.
< rtc_enabled >	Indicates if alarm is enabled or not. 1= Enabled 0= Disabled
< rtc_year >	The year on which the alarm is being set to trigger. The RTC supports years 2000-2099. The data is entered as a two digit value 0..99.
<rtc_month>	The month on which the alarm is being set to trigger. Values range from 1..12.

AT\$RTCALRM	Real Time Clock Alarm
<rtc_day>	The day on which the alarm is being set to trigger. Values range from 1..31.
<rtc_hour>	The hour on which the alarm is being set to trigger. Values range from 0..24 for 24-Hour mode settings. NOTE: only 24-Hour mode currently supported.
<rtc_min>	The minute on which the alarm is being set to trigger. Values range from 0..59.
<rtc_sec>	The second on which the alarm is being set to trigger. Values range from 0..59.
<rtc_alarmTimeinMinutes>	Periodic Alarm time in minutes. RTC Alarm will be reset at a period specified by this parameter.
Notes	<p>This command is used to set the Alarm time for the RTC. Currently all time is based on 24-Hour time format. The alarm may be cleared using the command AT\$RTCCLRA. This call in conjunction with the use of either the \$EVENT engine or the \$RTCWAKE command the user has a rich feature set of driving other events or waking the system up at a pre-determined time in the future. No checks are made for alarm time not being later than current time.</p> <p>AT\$RTCALRM will not trigger if the alarm time occurs while the unit is resetting.</p>
Examples	<p>Following sets and alarm for 2003, October, 13th at 17:00 Hours at\$rtcalrm=3,10,13,17,0,0 OK</p> <p>Following queries the alarm for current time, and shows that the alarm being; Enabled, for 2003, October 13th at 17:00 hours. at\$rtcalrm? \$RTCALRM: 01, 03, 10, 13, 17, 00, 00 OK</p> <p>Following call unsets alarm followed by displaying alarm time information. at\$rtcclra OK at\$rtcalrm? \$RTCALRM: 00, 03, 10, 13, 17, 00, 00 OK</p>

AT\$RTCCLRA Real Time Clock Clear Alarm

AT\$RTCCLRA	Real Time Clock Clear Alarm
Command Function	This command allows the modem to clear/disable the active RTC alarm. The alarm interrupt enable is cleared but alarm time not altered.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$RTCCLRA
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	None
Notes	This command will disable the RTC alarm while leaving the value of the last alarm time setting alone.

AT\$RTCRSET RTC Report Reset State

AT\$RTCRSET	RTC Report Reset State
Command Function	This command reports the reset state of the RTC following a power cycle. The command reports TRUE only if a reset occurred since last power up and last call to check it. So multiple calls will report the current status only.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$RTCRSET?
Execute Response	\$RTCRSET : <reset state> OK
Unsolicited Response	N/A
Parameter Values	

AT\$RTCRSET	RTC Report Reset State
<reset state>	1 - indicates that a RTC reset occurred, 0 - indicates that a RTC reset did NOT occur
Notes	This command returns the current reset state of the RTC since power-up. If multiple calls are made only current reset state is returned.
Examples	<p>Following example shows the check for the RTC being reset since last check of reset and since last power up, with a response of True.</p> <p>AT\$rtcrset? \$RTCRSET: 1 OK</p> <p>Following example shows the check for the RTC being reset since last check of reset and since last power up, with a response of False.</p> <p>AT\$rtcrset? \$RTCRSET: 0 OK</p>

AT\$RTCTIME Real Time Clock Time

AT\$RTCTIME	Real Time Clock Time
Command Function	This command handles the setting and querying of the RTC time registers.
Syntax Query	AT\$RTCTIME=?
Syntax	\$RTCTIME: (0-6),(0-99),(1-12),(1-31),(0-23),(0-59),(0-59) OK
Write Syntax	AT\$RTCTIME= <rtc_wkday>,<rtc_year>,<rtc_month>,<rtc_day>,<rtc_hour>,<rtc_min>,<rtc_sec>
Write Response	OK
Read Syntax	AT\$RTCTIME?
Read Response	\$RTCTIME: <rtc_wkday>, <rtc_year>, <rtc_month>, <rtc_day>,<rtc_hour>, <rtc_min>, <rtc_sec>” OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	Parameters are positional dependent, any parameter may be omitted with the use of the comma (’,’) as a place holder on command line. If a parameter is omitted then the current value in the hardware is used.
< rtc_wkday >	Current week day matching time day being set. The week day values range from 0-6, where; 0 = Sunday 1 = Monday 2 = Tuesday 3 = Wednesday 4 = Thursday 5 = Friday 6 = Saturday
< rtc_year >	The year to which the time is being set. The RTC supports years

AT\$RTCTIME	Real Time Clock Time
	2000-2099. The data is entered as a two digit value 0-99.
<rtc_month>	The month to which the time is being set. Values range from 1-12.
<rtc_day>	The day to which the time is being set. Values range from 1-31.
<rtc_hour>	The hour to which the time is being set. Values range from 0-24 for 24-Hour mode settings. NOTE: only 24-Hour mode currently supported.
<rtc_min>	The minute to which the time is being set. Values range from 0-59.
<rtc_sec>	The second to which the time is being set. Values range from 0-59.
Notes	This command is used to set the time for the RTC. Currently all time is based on 24-Hour time format.
Examples	at\$rtctime? \$RTCTIME: 01, 03, 10, 13, 14, 03, 2 OK at\$rtctime=? \$RTCTIME: (0..6), (0..99), (1..12), (1..31), (0..23), (0..59), (0..59) at\$rtctime=1,3,10,13,14,37,50 OK

AT\$RTCUPD Update RTC With NITZ

AT\$RTCUPD	Update RTC with NITZ
Command Function	This command allows the user to enable/disable setting of the RTC time with either UTC or NITZ
Syntax Query	AT\$RTCUPD=?
Syntax	\$RTCUPD: (0-2),(0-1) OK
Write Syntax	AT\$RTCUPD =<mode>,<reset>
Write Response	OK
Read Syntax	AT\$RTCUPD?
Read Response	\$RTCUPD: <mode>,<update> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<mode>	0 = disables updating the RTC. 1 = enables updating the RTC to UTC time 2 = Enables updating RTC to local time (based on the time zone from NITZ)
<reset>	0 = Do not reset \$RTCUPD <update> parameter 1 = Reset \$RTCUPD <update> parameter to 0
<update>	0 = RTC has not been updated 1 = RTC has been updated
Notes	NITZ can be used to update RTC, however, when GPS gets a lock, UTC time will be used to update the RTC time.

AT\$RTCWAKE Real Time Alarm Wake

AT\$RTCWAKE	Real Time Alarm Wake
Command Function	This command attempts to de-register from the network, at the end of a 5 second delay then powers down the modem so only the RTC is running. Upon the RTC alarm going off the modem will re-boot and initialize again. The command relies on the RTC Alarm feature being set prior, if system is to wake up at a preset time in the future.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$RTCWAKE
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
Notes	The AT\$RTCWAKE command powers down the modem, so only the RTC clock will be running. The modem will power up automatically only if the RTC Alarm feature has been, otherwise modem will remain powered off. See the AT\$RTCALRM command for setup of the RTC alarm.

Network Commands

AT\$AREG Auto Registration

AT\$AREG	Auto Registration
Command Function	This command sets the auto registration state of the modem
Syntax Query	AT\$AREG=?
Syntax	\$AREG: (0-2) OK
Write Syntax	AT\$AREG=<state>
Write Response	OK
Read Syntax	AT\$AREG?
Read Response	\$AREG: <state> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<state>	0 = Autoreg off 1 = Voice/SMS Autoreg on 2 = Auto Voice/SMS/Data Activation on Power up. (for \$hostif=1 and 2, MT will perform Network activation and go into PAD data mode. For \$hostif=0 MT will perform Network activation, but remain in AT command mode)
Notes	This command sets Network registration state. When set to 1 or 2, upon power on, the modem will automatically register on the network. This command also controls Network registration dynamically, this is the registration/deregistration occurs immediately.

AT\$CREG Network Registration Info

AT\$CREG	Network Registration Info
Command Function	Displays current network registration status. Write command enables/disables the unsolicited response code.
Syntax Query	AT\$CREG=?
Syntax	\$CREG: (0-2) OK
Write Syntax	AT\$CREG=<enableFlag>
Write Response	OK
Read Syntax	AT\$CREG?
Read Response	\$CREG: <enableFlag> OK
Execute Syntax	AT\$CREG
Execute Response	\$CREG: <enableFlag>,<status>,<lac>,<cid> OK
Unsolicited Response	\$CREG: <status>,<lac>,<cid>
Parameter Values	
<enableFlag>	0 = disable network registration unsolicited result code 1 = enable network registration unsolicited result code 2 = enable network registration unsolicited result code with LAC and CID
<status>	0 = airplane mode 1 = registered on home network 2 = registration in progress 3 = no service 4 = unknown 5 = registered roaming
<lac>	Location Area Code (GSM)
<cid>	Cell ID (GSM)
Notes	AT\$CREG is the same as AT+CREG except that the AT\$CREG allows the <enableFlag> to be saved across a power cycle using AT&W.

AT\$MDSTAT Query Modem Status

AT\$MDSTAT	Query Modem Status
Command Function	This command allows the user to display multiple modem status parameters with a single command.
Syntax Query	AT\$MDSTAT=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$MDSTAT?
Read Response	\$DEVTYP: 29,1 \$PKG: 1 Enabler HS 3002V 2nd UART: present \$CREG: 1 \$CGREG: 1 +CSQ: 31, 99 \$NETIP: "0.0.0.0","0.0.0.0","0.0.0.0" \$TCPERR: 0,0,0 OK
Execute Syntax	AT\$MDSTAT
Execute Response	Same as read response
Unsolicited Response	N/A
Parameter Values	
<\$DEVTYP>	see AT\$DEVTYP? command
<\$PKG>	see AT\$PKG? command
<\$CGREG>	see AT\$CGREG? command
<+CSQ>	see AT+CSQ? command

AT\$MDSTAT	Query Modem Status
<\$NETIP>	see AT\$NETIP? command
<\$TCPERR>	<p>Contains 3 parameters</p> <p>First parameter: TCP ERROR values</p> <p>0 = no error stored 1 = normal closure 2 = unexpected RST 3 = unexpected SYN 4 = received FIN 5 = timeout establishing connection 6 = failure establishing connection 7 = timeout in close 8 = timeout on established connection 9 = RST on established connection 10 = ICMP rec'd: no route to host 11 = ICMP rec'd: connection refused 12 = ICMP rec'd: frag req, DF set 13 = no route found for destination 14 = interface down or other failure 15 = internal stack failure</p> <p>Second parameter: PAD disconnect values</p> <p>0 = no reason stored 1 = server timeout 2 = PPP caused 3 = host caused 4 = connection timeout 5 = caused by AT command</p> <p>Third parameter: TCPAPI disconnect values</p> <p>0 = no reason stored 4 = connection timeout 5 = caused by AT command</p>

AT\$MDSTAT	Query Modem Status
	6 = bad message format 7 = connect fail
Notes	

AT\$NETMON Monitor Network Availability

AT\$NETMON	Monitor Network Availability
Command Function	This command allows the modem to take aggressive network recovery action based upon the results of continuous network monitoring.
Syntax Query	AT\$NETMON=?
Syntax	\$NETMON: (0,5-1440),(0-10),(0-255),(0-3) OK
Write Syntax	AT\$NETMON= <net_unavail_min>,<reset_cnt>,<ping check>,<rst timers>
Write Response	OK
Read Syntax	AT\$NETMON?
Read Response	AT\$NETMON: "<net_unavail_min >,<reset_cnt>,<ping check>,<rst timers>"
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<net_unavail_min>	Number of minutes the network must remain unavailable before current Network Activation is released, and a new Network Activation is attempted. Network availability is valid Network IP (AT\$NETIP). A value of zero means the Network Activation will never be released via AT\$NETMON.
<reset_cnt>	The number of times the modem will attempt to recover by using a network stack deactivation and re-activation process before using a modem reset to recover. If the value is 0, then never perform a modem reset.
<ping check>	Number of minutes between modem-initiated ping checks. If no network data has been received within <ping check> minutes, the modem will initiate pings (up to 4 ICMP messages are generated) to the 1st server on the \$FRIEND list.

AT\$NETMON	Monitor Network Availability
	<p>If no ping response is received to any of the 4 ICMP messages, the modem will initiate pings to the next server in the list. If no ping response is returned from any of the \$FRIEND servers, a new IP is obtained via a modem-initiated network de-activation / activation sequence.</p> <p>A value of zero indicates that the modem will never initiate a ping check.</p>
<rst timers>	<p>0 - Reset network monitoring timers upon any activity on the serial port AND use legacy IP reselect for <ping check> recovery</p> <p>1 - Do not reset the network monitoring timers if there is activity on the serial ports</p> <p>2 - Use modem reset for <ping check> recovery</p> <p>3 - Do not reset the network monitoring timers if there is activity on the serial ports AND use modem reset for <ping check> recovery</p>
Notes	<p>This command allows the <net_unavail_min> parameter to be set as low as 5 minutes for backwards compatibility with legacy scripts. However, due to certification requirements, the soonest a \$NETMON recovery action can be performed is 30 minutes</p>

AT\$NWRAT Radio Access Technology Selection

AT\$NWRAT	Radio Access Technology Selection
Command Function	This command allows the user to select the preferred radio access technology mode and preferred service domain. This command also allows the user to view the current radio access technology mode and service domain.
Syntax Query	AT\$NWRAT=?
Syntax	\$NWRAT: (0-2),(0-2) OK
Write Syntax	AT\$NWRAT=<mode>,<domain>
Write Response	OK
Read Syntax	AT\$NWRAT?
Read Response	\$NWRAT: <mode>,<domain>,<state> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<mode>	Preferred Mode 0 = Automatic 1 = GSM Only 2 = WCDMA Only

AT\$NWRAT	Radio Access Technology Selection
<domain>	Preferred Service Domain 0 = CS Only (circuit switched) 1 = PS Only (packet switched) 2 = CS and PS
<state>	The current mode and service domain 0 = Searching for Service 1 = WCDMA CS (Circuit Switched) 2 = WCDMA PS (Packet Switched) 3 = WCDMA CS and PS 4 = GSM CS (Circuit Switched) 5 = GSM PS (Packet Switched) 6 = GSM CS and PS
Notes	

AT\$PDPACT PDP Activate

AT\$PDPACT	PDP Activate
Command Function	This command allows the user to activate a session separately from opening the TCP/UDP socket for UDP OR TCP PAD..
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$PDPACT
Execute Response	OK or ERROR
Unsolicited Response	N/A
Parameter Values	N/A
Notes	<p>User must set the following AT commands prior to using this command:</p> <p>AT\$AREG=1</p> <p>AT\$PADDISC=1</p> <p>AT\$HOSTIF=1 or 2</p> <p>Used in conjunction with the AT\$PDPDEACT command</p>
Example	N/A

AT\$PDPDEACT PDP Deactivate

AT\$PDPDEACT	PDP Deactivate
Command Function	This command will deactivate the IP session that was activated with AT\$PDPACT
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$PDPDEACT
Execute Response	OK or ERROR
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Used in conjunction with the AT\$PDPACT command.
Example	N/A

AT\$QCDNSP DNS Primary IP Address

AT\$QCDNSP	DNS Primary IP Address
Command Function	This command sets the default primary IP address used for Domain Name Services (DNS). This IP address is used only if no DNS server address is received over the air during network data activation. The value is stored in NVRAM.
Syntax Query	AT\$QCDNSP=?
Syntax	\$QCDNSP: OK
Write Syntax	AT\$QCDNSP=<IP address>
Write Response	OK
Read Syntax	AT\$QCDNSP?
Read Response	\$QCDNSP: <IP address> OK
Execute Syntax	AT\$QCDNSP
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	
<Param1>	
<Param2>	
<IP address>	IP address in dotted decimal notation Note: valid values are 0-254. The value 255 is not allowed.
Notes	
Examples	AT\$QCDNSP? \$QCDNSP: 151.144.244.200 OK

AT\$QCDNSS Secondary DNS IP Address

AT\$QCDNSS	Secondary DNS IP Address
Command Function	This command is used to set the default secondary IP address used for Domain Name Services (DNS).
Syntax Query	AT\$QCDNSS=?
Syntax	\$QCDNSS: OK
Write Syntax	AT\$QCDNSS=<IP address>
Write Response	OK
Read Syntax	AT\$QCDNSS?
Read Response	\$QCDNSS: <IP address> OK
Execute Syntax	AT\$QCDNSS
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	
<IP address>	IP address in dotted decimal notation Note: valid values are 0-254. The value 255 is not allowed.
Notes	
Examples	

AT+CBST Select Bearer Service Type

AT+CBST	Select Bearer Service Type
Command Function	This command is used to select the bearer service with data rate and the connection element to be used when data calls are originated.
Syntax Query	AT+CBST=?
Syntax	+CBST: (0,7,12,14,16,17,39,43,48,51,71,75,80,81,83,84,116,134),(0,1,4),(0,1) OK
Write Syntax	AT+CBST=<speed>,<name>,<ce>
Write Response	OK/ERROR
Read Syntax	AT+CBST?
Read Response	+CBST: <speed>,<name>,<ce>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<speed>	<speed> (in bps) 0 - Autobaud 7 - 9600 (V.32) 12 - 9600 (V.34) 14 - 14400 (V.34) 16 - 28800 (V.34) 17 - 33600 (V.34) 39 - 9600 (V.120) 43 - 14400 (V.120) 48 - 28800 (V.120) 51 - 48000 (V.120) 71 - 9600 (V.110) 75 - 14400 (V.110)

AT+CBST	Select Bearer Service Type
	80 - 28800 (V.110) 81 - 38400 (V.110) 83 - 56000 (X.31 flag stuffing, UDI/RDI) 84 - 64000 bps (X.31 flag stuffing, UDI) 116 - 64000 bps 134 - 64000 bps (multimedia)
<name>	0 - Data circuit asynchronous (UDI or 3.1 kHz modem) 1 - Data circuit synchronous (UDI or 3.1 kHz modem) 4 - Data circuit asynchronous (RDI)
<ce>	0 = data transparent 1 = data nontransparent
Notes	N/A
Example	<p>AT+CBST=7,0,1</p>

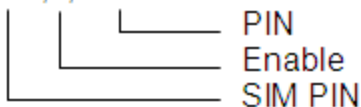

AT+CGREG Network Registration Status

AT+CGREG	Network Registration Status
Command Function	Controls the presentation of an unsolicited result code +CGREG.
Syntax Query	AT+CGREG=?
Response	+CGREG: (0,2) OK
Write Syntax	AT+CGREG=1
Response	OK
Read Syntax	AT+CGREG?
Response	+CGREG: <n>,<stat>[,<lac>,<ci>] OK
Execute Syntax	N/A
Response	N/A
Parameter Values	
<n>	0 = disable network registration unsolicited result code 1 = enable network registration unsolicited result code +CGREG: <stat> 2 = enable network registration and location information unsolicited result code +CGREG: <stat>[,<lac>,<ci>]
<stat>	0 = not registered, ME is not currently searching a new operator to register to 1 = registered, home network 2 = not registered, but ME is currently searching a new operator to register to 3 = registration denied 4 = unknown 5 = registered, roaming
<lac>	String type; two-byte location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal)

AT+CGREG	Network Registration Status
<ci>	String type; two-byte cell ID in hexadecimal format
Notes	If parameter <n> is omitted the command does nothing.
Examples	

AT+CLCK Facility Lock

AT+CLCK	Facility Lock
Command Function	This command is used to lock, unlock or interrogate a ME or a network facility <fac>. When querying the status of a network service (<mode>=2) the response line for a “not active” case (<status>=0) should be returned only if service is not active for any <class>. It should be possible to abort the command when network facilities are set or interrogated.
Syntax Query	AT+CLCK=?
Syntax	+CLCK: ("AB","AC","AG","AI","AO","IR","OI","OX","SC","FD","PN","PU","PP","PC","PF") OK
Write Syntax	AT+CLCK=<fac>, <mode> [, <passwd> [, <class>]]
Write Response	If <mode><> 2 and command is successful then OK If <mode>=2 and command is successful then +CLCK:<status>[, <class1>[<CR><LF>+CLCK: <status>, class2...]] OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<fac>	“AB” = (All Barring Services) “AC” = (All incoming Barring) “AG” = (All Outgoing Barring) “AI” = (Barr All Incoming Calls) “AO” = (Barr All Outgoing Calls) “IR” = (Barr Incoming Calls when Roaming outside the Home Country) “OI” = (Barr Outgoing International Calls)

AT+CLCK	Facility Lock
	<p>"OX" = (Barr Outgoing International Calls except Home Country)</p> <p>"SC" = (SIM PIN 1)</p> <p>"FD" = (SIM Fixed Dialing Feature)</p> <p>"PN" = Network Personalization</p> <p>"PU" = network Subset Personalization</p> <p>"PP" = (Provider Personalization, allows for personalization to custom service provider defined groups)</p> <p>"PC" = (Corporate Personalization, allows personalization to custom corporate group settings)</p> <p>"PF" = lock Phone to the very First inserted SIM card (also referred in the present document as PH-FSIM) (ME asks password when other than the first SIM card is inserted)</p>
<mode>	<p>0 = Unlock</p> <p>1 = Lock</p> <p>2 = Query Status</p>
<passwd>	"password"
<class>	<p>1 = voice</p> <p>2 = data</p> <p>4 = fax (fax not supported)</p> <p>7 = all classes (default)</p> <p>8 = short message service</p>
<status>	<p>0 = Off</p> <p>1 = On</p>
Notes	Quotation marks are optional when entering <passwd>.
Example:	<p>To enable SIM PIN</p> <pre>AT+CLCK="SC",1,"xxxx"</pre> 

AT+CNUM Subscriber Number

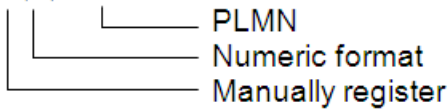

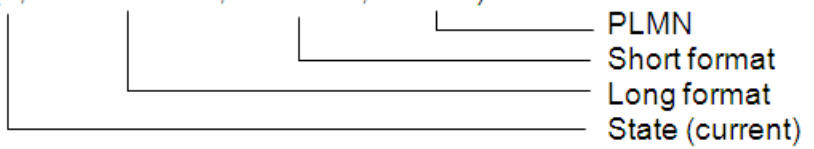

AT+CNUM	Subscriber Number
Command Function	This command is used to obtain the MSISDNs related to the subscriber.
Syntax Query	AT+CNUM=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CNUM
Execute Response	+CNUM: "Line1", "xxx xxx xxxx", 145 OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	

AT+COPN Read Operator Names

AT+COPN	Read Operator Names
Command Function	Execute command returns the list of operator names from the ME.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+COPN
Execute Response	+COPN: <numeric1>,<alpha1>[<CR><LF>+COPN: <numeric2>,<alpha2>[...]] OK
Unsolicited Response	N/A
Parameter Values	
<numericn>	string type; operator in numeric format (see +COPS)
<alphan>	string type; operator in long alphanumeric format (see +COPS)
Notes	N/A

AT+COPS Operator Selection

AT+COPS	Operator Selection
Command Function	<p>Write command forces an attempt to select and register the GSM network operator. <mode> is used to select whether the selection is done automatically by the ME or is forced by this command to operator <oper> (it shall be given in format <format>). If the selected operator is not available, no other operator shall be selected (except <mode> = 4). The selected operator name format shall apply to further read commands (+COPS?) also. <mode>=2 forces an attempt to deregister from the network. The selected mode affects to all further registration (e.g. after <mode>=2, ME shall be unregistered until <mode>=0 or 1 is selected).</p> <p>Read command returns the current mode and the currently selected operator. If no operator is selected, <format> and <oper> are omitted.</p> <p>Test command returns a list of quadruplets, each representing an operator present in the network. Quadruplet consists of an integer indicating the availability of the operator <stat>, long and short alphanumeric format of the name of the operator, and numeric format representation of the operator. Any of the formats may be unavailable and will then be an empty field (,,). The list of operators comes in the following order: Home network, networks referenced in SIM, and other networks.</p>
Syntax Query	AT+COPS=?
Syntax	<p>+COPS: (2, “ “, “ “, “31022”), (3, “ “, “ “, “310380”)</p> <p>OK</p>
Write Syntax	AT+COPS=<mode>
Write Response	<p>[, <format> [, oper>]]</p> <p>OK or +CME ERROR: <err></p>
Read Syntax	AT+COPS?
Read Response	<p>+COPS: 0</p> <p>OK</p>
Execute Syntax	N/A
Execute Response	N/A

AT+COPS	Operator Selection
Unsolicited Response	N/A
Parameter Values	
<mode>	0 = automatic (<oper> field is ignored) 1 = manual (<oper> field shall be present) 2 = deregister from network 3 = set only <format> (for read command +COPS?), do not attempt registration/deregistration (<oper> field is ignored); this value is not applicable in read command response 4 = manual/automatic (<oper> field shall be present); if manual selection fails, automatic mode (<mode>=0) is entered
<format>	0 = long format alphanumeric <oper> 1 = short format alphanumeric <oper> 2 = numeric <oper>; GSM Location Area Identification Number
<oper>	operator in format as in per <format>
<stat>	0 = Unknown 1 = Available 2 = Current 3 = Forbidden
Notes	
Example	<p>To manually register the modem on a known PLMN:</p> <pre>AT+COPS=1,2,"xxxxx"</pre>  <p>To read operator information:</p> <pre>AT+COPS=? +COPS: (2,"Voicestream","Vstream","31022")</pre> 

AT+CPIN Enter PIN

AT+CPIN	Enter PIN
Command Function	<p>Set command sends to the ME a password that is necessary before it can be operated (SIM PIN, SIM PUK, PH-SIM PIN, etc.).</p> <p>If no PIN request is pending, no action is taken towards ME and an error message, +CME ERROR, is returned to TE.</p> <p>If the PIN required is SIM PUK or SIM PUK2, the second pin is required. This second pin, <newpin>, is issued to replace the old pin in the SIM.</p>
Syntax Query	AT+CPIN=?
Syntax	OK
Write Syntax	AT+CPIN=<"pin">,<"newpin">]
Write Response	
Read Syntax	AT+CPIN?
Read Response	<p>+CPIN: <code></p> <p>OK</p> <p>or</p> <p>+CME ERROR: <err></p>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<code>	<p>READY = ME is not pending for any password</p> <p>SIM PIN = ME is waiting SIM PIN to be given</p> <p>SIM PUK = ME is waiting SIM PUK to be given</p> <p>PH-SIM PIN = ME is waiting phone-to-SIM card password to be given</p> <p>PH-FSIM PIN = ME is waiting phone-to-very first SIM card password to be given</p> <p>PH-FSIM PUK = ME is waiting phone-to-very first SIM card unblocking password to be given</p> <p>SIM PIN2 = ME is waiting SIM PIN2 to be given (this <code> is recommended to be returned only when the last executed command resulted in PIN2 authentication failure (i.e. +CME</p>

AT+CPIN	Enter PIN
	<p>ERROR: 17); if PIN2 is not entered right after the failure, it is recommended that ME does not block its operation)</p> <p>SIM PUK2 = ME is waiting SIM PUK2 to be given (this <code> is recommended to be returned only when the last executed command resulted in PUK2 authentication failure (i.e. +CME ERROR: 18); if PUK2 and new PIN2 are not entered right after the failure, it is recommended that ME does not block its operation)</p> <p>PH-NET PIN = ME is waiting network personalization password to be given</p> <p>PH-NET PUK = ME is waiting network personalization unblocking password to be given</p> <p>PH-NETSUB PIN = ME is waiting network subset personalization password to be given</p> <p>PH-NETSUB PUK = ME is waiting network subset personalization unblocking password to be given</p> <p>PH-SP PIN = ME is waiting service provider personalization password to be given</p> <p>PH-SP PUK = ME is waiting service provider personalization unblocking password to be given</p> <p>PH-CORP PIN = ME is waiting corporate personalization password to be given</p> <p>PH-CORP PUK = ME is waiting corporatepersonalization</p>
Note	<p>Commands which interact with ME that are accepted when ME is pending SIM PIN, SIM PUK, or PH-SIM are: +CGMI, +CGMM, +CGMR, +CGSN, D112; (emergency call), +CFUN, +CPIN, After power on the modem needs 20-25 seconds to initialize and completely read the SIM.</p> <p>* If AT\$AREG=1, and PIN is enabled, the modem will not complete the auto registration process until after the PIN has been entered (AT+CPIN).</p> <p>Quotation marks are optional when entering <pin> or <newpin>.</p>

AT+CPLS Selection Of Preferred PLMN List

AT+CPLS	Selection of Preferred PLMN List
Command Function	This command is used for selecting/reading the preferred PLMN list type.
Syntax Query	+CPLS=?
Response	+CPLS: (list of supported <list>s) +CME ERROR: <err>
Write Syntax	+CPLS=<list>
Response	+CME ERROR: <err>
Read Syntax	+CPLS?
Response	+CPLS: <list> +CME ERROR: <err>
Execute Syntax	N/A
Response	N/A
Parameter Values	
<list>	<p>0 = User controlled PLMN selector with Access Technology $EF_{PLMNwAcT}$, if not found in the SIM/UICC then PLMN preferred list $EF_{PLMNsel}$ (this file is only available in SIM card or GSM application selected in UICC)</p> <p>1 = Operator controlled PLMN selector with Access Technology $EFO_{PLMNwAcT}$</p> <p>2 = HPLMN selector with Access Technology $EFH_{PLMNwAcT}$</p>
Notes	
Examples	

AT+CPWD Change Password

AT+CPWD	Change Password
Command Function	This command is used to set a new password for the facility lock function defined by command Facility Lock +CLCK.
Syntax Query	AT+CPWD=?
Syntax	+CPWD: ("AB",4),("AC",4),("AG",4),("AI",4),("AO",4),("IR",4),("OI",4),("OX",4),("SC",8),("P2",8) OK
Write Syntax	AT+CPWD = <fac>,[<oldpwd>],<newpwd>
Write Response	OK or +CME ERROR: <err>
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<fac>	Facility "AB" - (All Barring Services) "AC" - (All incoming Barring) "AG" - (All Outgoing Barring) "AI" - (Barr All Incoming Calls) "AO" - (Barr All Outgoing Calls) "IR" - (Barr Incoming Calls when Roaming outside the Home Country) "OI" - (Barr Outgoing International Calls) "OX" - (Barr Outgoing International Calls except Home Country) "SC" - (SIM PIN 1) "P2" - (SIM PIN 2)
<oldpwd>	Password specified for the facility. If an old password has not yet been set, <oldpwd> is not entered

AT+CPWD	Change Password
<newpwd>	"new password"
Notes	<p>In order to change the password, the applicable facility must be enabled. See AT+CLCK.</p> <p>The second element of each facility (<fac>) represents the maximum password size allowed.</p> <p>The password can be changed only if the facility is unlocked.</p> <p>Quotation marks are optional when entering <oldpwd> or <newpwd>.</p>
Example:	<p>To change SIM PIN:</p> <p>AT+CPWD="SC","xxxx","yyyy"</p> <p>SC=SIM PIN</p> <p>xxxx = old password</p> <p>yyyy = new password</p>

AT+CPOL Preferred Operator List

AT+CPOL	Preferred Operator List
Command Function	This command is used to list and edit the SIM preferred list of networks.
Syntax Query	AT+CPOL=?
Syntax	+CPOL: (1-n), (0-2) OK
Write Syntax	AT+CPOL=[<index>][, <format>[, <oper>]]
Write Response	OK
Read Syntax	AT+CPOL?
Read Response	+CPOL: <index1>,<format>,<oper1>... <index10>,<format>,<oper10> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<indexn>	integer type; the order number of operator in the SIM preferred operator list
<format>	0 = long format alphanumeric <oper> 1 = short format alphanumeric <oper> 2 = numeric <oper>
<opern>	string type; <format> indicates if the format is alphanumeric or numeric (see +COPS)
Notes	This command is used to edit the SIM preferred list of networks. Execute command writes an entry in the SIM list of preferred operators (EFPLMNsel). If <index> is given but <oper> is left out, entry is deleted. If <oper> is given but <index> is left out, <oper> is put in the next free location. If only <format> is given, the format of the <oper> in the read command is changed.

AT+CR Service Reporting Control

AT+CR	Service Reporting Control
Command Function	This command is used to control the display of intermediate result code (+CR <serv>) status.
Syntax Query	AT+CR=?
Syntax	+CR: (0,1) OK
Write Syntax	AT+CR=<mode>
Write Response	OK
Read Syntax	AT+CR?
Read Response	+CR: 0 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<mode>	0 = disable 1 = enable
<serv>	ASYNC = asynchronous transparent SYNC = synchronous transparent REL ASYNC = asynchronous non-transparent REL SYNC = synchronous non-transparent
Notes	If enabled, the intermediate result code is transmitted at the point during connect negotiation at which the TA has determined which speed and quality of service will be used, before any error control or data compression reports are transmitted, and before any final result code (e.g. CONNECT) is transmitted.

AT+CREG Network Registration Info

AT+CREG	Network Registration Info
Command Function	Write command controls the presentation of an unsolicited result code +CREG: <stat> . Read command returns the status of result code, which shows whether the network has currently indicated the registration of the ME.
Syntax Query	AT+CREG=?
Syntax	+CREG: (0-2) OK
Write Syntax	AT+CREG=[<n>]
Write Response	OK
Read Syntax	AT+CREG?
Read Response	+CREG: <n>,<stat>[,<lac>,<ci>] OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<n>	0 = disable network registration unsolicited result code 1 = enable network registration unsolicited result code +CREG: <stat> 2 = enable network registration and location information unsolicited result code +CREG: <stat>[,<lac>,<ci>]
<stat>	0 = not registered, ME is not currently searching a new operator to register to 1 = registered, home network 2 = not registered, but ME is currently searching a new operator to register to 3 = registration denied 4 = unknown

AT+CREG	Network Registration Info
	5 = registered, roaming
<lac>	string type; two-byte location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal)
<ci>	string type; two-byte cell ID in hexadecimal format
Notes	N/A

AT+CRLP Radio Link Protocol Parameters

AT+CRLP	Radio Link Protocol Parameters
Command Function	This command is used to select the radio link protocol parameters.
Syntax Query	AT+CRLP=?
Syntax	+CRLP: (0-61), (0-61), (39-255), (1-255) OK
Write Syntax	AT+CRLP=<iws>,<mws>,<T1>,<N2>
Write Response	OK/ERROR
Read Syntax	AT+CRLP?
Read Response	+CRLP: 61, 61, 48, 6 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<iws>	IWF to MS window size values = 0 to 61 (61 recommended)
<mws>	MS to IWF window size values = 0 to 61 (61 recommended)
<T1>	Acknowledgment timer values = halfrate >380ms (480 recommended) fullrate >600ms (780 recommended)
<N2>	Retransmission attempts values = >0 (6 recommended)
Notes	N/A

AT+CSQ Signal Quality And Bit Error Rate

AT+CSQ	Signal Quality and Bit Error Rate
Command Function	Execution command returns received signal strength indication <rssi> and channel bit error rate <ber> from the ME.
Syntax Query	AT+CSQ=?
Syntax	+CSQ: (0-31,99),(0-7,99) OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT+CSQ?
Read Response	+CSQ: <rssi>,<ber> OK
Execute Syntax	AT+CSQ
Execute Response	+CSQ: <rssi>,<ber> OK
Unsolicited Response	NA
Parameter Values	
<rssi>	0 = -113 dBm or less 1 = -111 dBm 2-30 = -109 through -53 dBm 31 = -51 dBm or greater 99 = not known or not detectable
<ber>	The value '99' will always be returned which means "not known."
Notes	N/A

Phone Book Commands

AT+CIMI Request IMSI

AT+CIMI	Request IMSI
Command Function	This command is used to obtain the International Mobile Subscriber Identity (IMSI) value assigned to the SIM.
Syntax Query	AT+CIMI=?
Syntax	OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT+CIMI
Execute Response	310260101xxxxx OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Return value is manufacturer specific. The TA returns the International Mobile Subscriber Identity (IMSI).

AT+CIND Indicator Control

AT+CIND	Indicator Control
Command Function	<p>Set command is used to set the values of MT indicators.</p> <p>Read command returns the status of MT indicators. If MT is not currently reachable, +CME ERROR: <err> is returned. Refer subclause 9.2 for <err> values.</p> <p>Test command returns pairs, where string value <descr> is a maximum 16 character description of the indicator and compound value is the allowed values for the indicator. If MT is not currently reachable, +CME ERROR: <err> is returned. Refer subclause 9.2 for <err> values.</p>
Syntax Query	AT+CIND=?
Syntax	+CIND: ("signal",(0-5)),("smsfull",(0-1)) OK
Write Syntax	AT+CIND=<signal>,<smsfull>
Write Response	OK
Read Syntax	AT+CIND?
Read Response	+CIND: <signal>,<smsfull> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<signal>	signal quality (0-5)
<smsfull>	A short message memory storage in the MT has become full and a short message has been rejected (2), has become full(1), or memory locations are available (0).
Notes	N/A

NITZ Commands

AT+CCLK Enable Setting And Reading Of RTC

AT+CCLK	Enable Setting and reading of RTC
Command Function	This command allows the user to set or read the Real Time Clock.
Syntax Query	AT+CCLK=?
Syntax	+CCLK: ("yy/MM/dd,hh:mm:ss+zz") OK
Write Syntax	AT+ CCLK ="yy/MM/dd,hh:mm:ss+zz"
Write Response	OK
Read Syntax	AT+ CCLK?
Read Response	+CCLK: "00/01/12,05:44:53+00" OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	Year/month/day,hour:minutes:seconds+time zone
Notes	+CCLK shares the same functionality as AT\$RTCTIME. When one is updated, the other will also be updated. Time zone is in quarter hour increments referenced to UTC time.

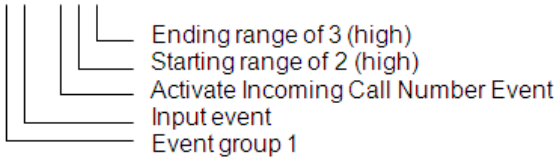

Event Commands

AT\$ETSAV# Event Timer Save Configuration

AT\$ETSAV#	Event Timer Save Configuration
Command Function	<p>These commands allow the user to set/query a flag that is used to determine whether the event timer value will be persistent through a reset. If the flag is set for the timer, the timer count will be saved roughly once a minute and the saved value will be used as the starting value for the timer following a reset. This is intended to support long-range timers (for example, 3 hours) where resolution of +/-1 minute would be acceptable.</p> <p>If the flag is clear, the timer always starts at zero following an reset.</p> <p>The # sign represents timers 1 through 10 (i.e. ETSAV1).</p>
Syntax Query	AT\$ETSAV#=?
Syntax	\$ETSAV#:(0-1) OK
Write Syntax	AT\$ETSAV#=<flag>
Write Response	OK
Read Syntax	AT\$ETSAV#?
Read Response	\$ETSAV#: <flag>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<flag>	1 =save this event timer value roughly once a minute to flash 0 = restart this event timer at zero following reset (default)
Notes	AT&W must be issued after flag is set to ensure flag retains its status through a reset.
Example	N/A

AT\$EVCID User Defined Incoming Call Number Event

AT\$EVCID	User defined incoming call number event
Command Function	This command allows the user to define up to 5 separate incoming call number user input events
Command Functional	Novatel Wireless Specific
Group	
Syntax Query	AT\$EVCID=?
Syntax	\$EVCID: (1-5),(0-2),"<ph_num>" OK
Write Syntax	AT\$EVCID=<entry>,<mode>[,<"number">]
Write Response	OK
Read Syntax	AT\$EVCID?
Read Response	\$EVCID: <entry>,<mode>,<"number">
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<entry>	1-5 = Selects which CID entry to modify
<mode>	0 = Disable event generation for incoming call number 1 = Enable event generation for incoming call number and suppress ring indication and respond to network with busy signal. 2 = Enable event generation for incoming call number and do not suppress ring indication.

AT\$EVCID	User defined incoming call number event
<number>	string type;Character string [-]<0..9,+,>?. Where <?> is a single character wildcard. If number starts with '~' it will match to any incoming call number with 0 or more digits preceding the remaining digits in the string. This is useful for matching to local, national and international ISDN telephony numbering plans.
Notes	In the event the incoming call number matches more than one incoming call number selection, the mode selection will be based on priority order. The priority order will be for entries 1 through 5 with entry 1 having the highest priority.
Example:	<p>These commands will cause the example in AT\$EVENT to trigger for incoming call numbers matching event call id 2 or event call id 3.</p> <pre>AT\$EVCID=2,1,"123456789?" // Define incoming call number with the last digit a wildcard AT\$EVCID=3,1,"~123456789" // Define incoming call number to allow For local and international prefixes</pre> <pre>AT\$EVENT=1,1,65,2,3</pre>  <p>Ending range of 3 (high) Starting range of 2 (high) Activate Incoming Call Number Event Input event Event group 1</p>

AT\$EVDEL Delete Event

AT\$EVDEL	Delete Event
Command Function	This command allows the user to delete items from the user generated event table. Entering only the group number will delete the whole group.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$EVDEL=<group><letter ID>
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	
<group>	event list group number
<letter ID>	letter indicating which element of the group (optional)
Notes	
Example:	AT\$EVDEL=1 Will delete all entries event group 1 AT\$EVDEL=1b Will delete only the second entry in event group 1

AT\$EVDELA Delete Event (All)

AT\$EVDELA	Delete Event (All)
Command Function	This command allows the user to delete all events from the event table.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$EVDELA
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	N/A

This command deletes ALL events from the event table including the default events that control the flashing of the status LEDs. If the default events are deleted, they must be manually recreated or use AT&F to restore the factory configuration.

AT\$EVDEL R Delete A Range Of Event Groups

AT\$EVDEL R	Delete a Range of Event Groups
Command Function	This command deletes a range of event groups.
Syntax Query	AT\$EVDEL R=?
Syntax	\$EVDEL R: (0-255),(0-255) OK
Write Syntax	AT\$EVDEL R=<start>,<stop>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<start>	First group index in range to be deleted
<stop>	Last group index in range to be deleted.
Notes	N/A

AT\$EVENT User Defined Input/Output

AT\$EVENT	User Defined Input/Output																																																						
Command Function	This command allows the user to customize the modem’s input and output capabilities. Any combination of input events can be monitored to trigger any combination of output events.																																																						
Syntax Query	AT\$EVENT=?																																																						
Syntax	\$EVENT: (0-255),(0-3),(0-255),(-2147483647-2147483647),(-2147483647-2147483647),(-2147483647-2147483647)																																																						
Write Syntax	AT\$EVENT=<event group>,<event type>,<event category>,<parm1>,<parm2>,<parm3>																																																						
Write Response	OK																																																						
Read Syntax	AT\$EVENT?																																																						
Read Response	<div>\$EVENT:<evgp>,<evtyp>,<evcat>,<p1>,<p2>,<p3></div> <table><thead><tr><th>evgp</th><th>evtyp</th><th>evcat</th><th>p1</th><th>p2</th><th>p3</th></tr></thead><tbody><tr><td>1A</td><td>0</td><td>9</td><td>2</td><td>4</td><td></td></tr><tr><td>1B</td><td>3</td><td>37</td><td>1</td><td>0</td><td>0</td></tr><tr><td>2A</td><td>0</td><td>9</td><td>5</td><td>5</td><td></td></tr><tr><td>2B</td><td>3</td><td>21</td><td>0</td><td>0</td><td>0</td></tr><tr><td>3A</td><td>0</td><td>9</td><td>0</td><td>0</td><td></td></tr><tr><td>3B</td><td>3</td><td>13</td><td>0</td><td>0</td><td>0</td></tr><tr><td>4A</td><td>0</td><td>9</td><td>1</td><td>1</td><td></td></tr><tr><td>4B</td><td>3</td><td>21</td><td>0</td><td>0</td><td>0</td></tr></tbody></table>	evgp	evtyp	evcat	p1	p2	p3	1A	0	9	2	4		1B	3	37	1	0	0	2A	0	9	5	5		2B	3	21	0	0	0	3A	0	9	0	0		3B	3	13	0	0	0	4A	0	9	1	1		4B	3	21	0	0	0

2B	3	21	0	0	0																																																		
3A	0	9	0	0																																																			
3B	3	13	0	0	0																																																		
4A	0	9	1	1																																																			
4B	3	21	0	0	0																																																		
Execute Syntax	N/A																																																						
Execute Response	N/A																																																						
Unsolicited Response	N/A																																																						
Parameter Values																																																							
<event group>	<p>This parameter defines the group number of a group of events and the order they are executed. Events are grouped together to control execution sequence. A group number has to have at least one input event and one output event. Multiple input events within a group number would be treated as a logical AND condition. Multiple output events within a group number would be executed individually in a sequential manner.</p> <p>Valid values for group number are: 0 thru 255.</p> <p>For additional details see the Event Tables section of this manual.</p>																																																						

AT\$EVENT	User Defined Input/Output
<event type>	<p>This parameter defines the type of event: Input or Output. An Input event can be defined as: Transition, Occurrence, or Input. The output event is executed when input event conditions are met.</p> <p>For additional details see the Event Tables section of this manual.</p>
<event category> , <parm1>, <parm2>, <parm3>	<p>These parameters define the actual Input or Output Event number and their valid range for <parm1> and <parm2>.</p> <p>The <parm3> parameter is only used for output events 40, 41, 42 and 52; it is ignored if entered for an input event or any other output events.</p> <p>For additional details see the Event Tables section of this manual.</p>
Notes	<p>A maximum of 600 events (input and output) are supported.</p> <p>User variable values are automatically saved to flash and explicit user intervention to save the values is not required. AT&W does not save user variables to flash. At the end of each event engine cycle, if any user variable has been changed the user variable values are automatically saved to flash at that time (so you can make multiple changes to user variables inside event groups without worrying about writing to flash too often). Changing a user variable via \$EVTEST also causes the user variable values to be saved to flash.</p>

AT\$EVGQRY Event Group Query

AT\$EVGQRY	Event Group Query
Command Function	Allows user to query the contents of a single event group (same output format as \$EVENT?, but limited to a single event group).
Syntax Query	AT\$EVGQRY=?
Syntax	AT\$EVGQRY: (0-255) OK
Write Syntax	AT\$EVGQRY=<event group>
Write Response	<div> \$EVGQRY: <div> <div>evgp</div> <div>evtyp</div> <div>evcat</div> <div>p1</div> <div>p2</div> <div>p3</div> </div> <div> <div>1A</div> <div>0</div> <div>27</div> <div>1</div> <div>1</div> <div>0</div> </div> <div> <div>1B</div> <div>3</div> <div>22</div> <div>0</div> <div>0</div> <div>0</div> </div> </div> OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<event group>	<p>This parameter defines the group number of a group of events and the order they are executed. Events are grouped together to control execution sequence. A group number has to have at least one input event and one output event. Multiple input events within a group number would be treated as a logical AND condition. Multiple output events within a group number would be executed individually in a sequential manner.</p> <p>Valid values for group number are: 0 thru 255.</p>
Notes	

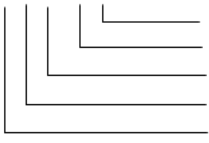

AT\$EVNTRY Event Count Query

AT\$EVNTRY	Event Count Query
Command Function	This command queries how many events have been used and how many are left.
Syntax Query	AT\$EVNTRY=?
Syntax	ERROR
Write Syntax	N/A
Write Response	N/A
Read Syntax	AT\$EVNTRY?
Read Response	\$EVNTRY: <used>,<left>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<used>	Number of events that have been used
<left>	Number of events available for new entries
Notes	

AT\$EVTEST Generate Test Input Event

AT\$EVTEST	Generate Test Input Event
Command Function	This command allows the user to generate any input event. This is useful for testing the user event table.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$EVTEST=<event>,<state>
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	
<event>	input event number
<state>	input event test state
Notes	N/A
Example:	<p>This example will cause the example provided in the AT\$EVENT to trigger.</p> <p>AT\$EVTEST=0,0</p> <div> <div></div> <div>Create a low input signal Event category 0 (Input line 1)</div> </div> <p>AT\$EVTEST=0,1</p> <div> <div></div> <div>Create a high input signal Event category 0 (Input line 1)</div> </div>

AT\$EVTIM# User Defined Input Event Timers

AT\$EVTIM#	User Defined Input Event Timers
Command Function	This command allows the user to define up to 10 separate periodic input events in 1 second increments. The # sign represents timers 1 through 10 (i.e. AT\$EVTIM1).
Syntax Query	AT\$EVTIM#=?
Syntax	\$EVTIM#: (0-604800) OK
Write Syntax	AT\$EVTIM#=<rate>
Write Response	OK
Read Syntax	AT\$EVTIM#?
Read Response	\$EVTIM#: <rate>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<rate>	number of seconds between each generated input event.
Notes	
Example	<p>These commands will cause the example in AT\$EVENT to trigger every 60 seconds.</p> <p>AT\$EVTIM1=60</p> <p>AT\$EVENT=1,1,12,1,1</p>  <p>Ending range of 1 (high) Starting range of 1 (high) Activate event timer 1 Input event Eventgroup 1</p>

AT\$EVTIMQRY Event Counter

AT\$EVTIMQRY	Event Counter
Command Function	This command shows the current count for the event counter of the timer specified indicated by the argument.
Syntax Query	AT\$EVTIMQRY=?
Syntax	\$EVTIMQRY: (1-10) OK
Write Syntax	AT\$EVTIMQRY=<timer_index>
Write Response	\$EVTIMQRY:<timer_index>=<count> OK
Read Syntax	AT\$EVTIMQRY?
Read Response	ERROR
Execute Syntax	AT\$EVTIMQRY=10
Execute Response	\$EVTIMQRY: 10=0 OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	AT\$EVTIMQRY=x will respond with ERROR if X timer has not been set (0).

AT\$EVTOFF Event Engine Disable

AT\$EVTOFF	Event Engine Disable
Command Function	The \$EVTOFF command gives the user the ability to disable the event engine. For example, this would be a good command to run prior to a software upgrade.
Syntax Query	AT\$EVTOFF=?
Syntax	\$EVTOFF:(0-1) OK
Write Syntax	AT\$EVTOFF=<state>
Write Response	OK
Read Syntax	AT\$EVTOFF?
Read Response	\$EVTOFF: <state>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<state>	0 = event engine enabled (default) 1 = event engine disabled
Notes	AT\$EVTOFF state is saved with AT&W
Example	N/A

AT\$EVTQRY Query The State Or Value Of The Specified Input Event

AT\$EVTQRY	Query the State or Value of the Specified Input Event
Command Function	This command allows the user to query the state or value of the input event number
Syntax Query	AT\$EVTQRY=?
Syntax	\$EVTQRY: (0 - <max input event>) OK
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$EVTQRY=<input event>
Execute Response	\$EVTQRY: <input event> = <state> (blnit=<updateFlag>)
Unsolicited Response	N/A
Parameter Values	
<max input event>	Maximum input event # supported by the current firmware build (see \$EVENT for the current maximum input event value).
<input event>	Range: 0 to <max input event> Selects which input event to query
Notes	
Example:	AT\$EVTQRY=29 /* query input event 29 (Invalid GPS) \$EVTQRY: 29=1436 /* 1436 seconds of consecutive invalid GPS data OK

AT\$STOATEV Store AT Command Events

AT\$STOATEV	Store AT Command Events
Command Function	This commands allows the user to store AT command output events. The AT command is executed upon the triggering of the associated input event.
Syntax Query	AT\$STOATEV=?
Syntax	\$\$STOATEV: (1-35),<AT commands> OK
Write Syntax	AT\$STOATEV = <1-35>, < AT command >
Write Response	OK
Read Syntax	AT\$ STOATEV?
Read Response	\$STOATEV: AT Event# AT Ccmds 1 2 35 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	

AT\$STOATEV	Store AT Command Events
<1-35 >	AT event index.
<AT command>	<p>AT command associated with the AT event index. The AT command is not checked for validity.</p> <p>This parameter is limited to a maximum of 141 characters.</p>
Notes	<p>This command is used in conjunction with the Dynamic Input Output event (AT\$EVENT). The output event associated with this command is event 44. When output event 44 is defined in the event table, Parm1 defines which index to refer to.</p> <p>The AT command associated with the index is executed. The use of Dynamic Event Scripting using AT\$EVENT or AT\$EVDEL as a stored AT Command Event can lead to unpredictable operation and is not recommended. When storing command to dial a voice call, a “v” replaces the “;” at the end of the dial string..(i.e., atd17195551212v)</p>

AT\$USRVAL User Value

AT\$USRVAL	User Value
Command Function	Allows the user to store a value in flash memory which can later be retrieved.
Syntax Query	AT\$USRVAL=?
Syntax	\$USRVAL: (0-FFFFFFFF) OK
Write Syntax	AT\$USRVAL=<hex value>
Write Response	OK
Read Syntax	AT\$USRVAL?
Read Response	\$USRVAL:(hex value) OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<hexval>	(0-FFFFFFFF)
Notes:	N/A

FMI Commands

This section pertains to the AT Command Set to be used in conjunction with the Novatel Wireless® modems with Garmin FMI version 2 (v2) firmware and later.

The optional features described in this section require additional licensing. The features will not function on devices unless the appropriate license has been purchased. For information about purchasing a license and enabling these features, please contact your Novatel Wireless sales representative.

Not all GARMIN PNDs with FMI v2 support all FMI v2 commands available. Please verify the Protocol Support Data of the Garmin PND being used. The AT command used to query this information is provided "AT\$GFMI - Garmin FMI" on page 1

Do not attempt to enter route information or adjust the unit while driving. Failure to pay full attention to the operation of your vehicle could result in death, serious injury or property damage. You assume total responsibility and risk for using this device.

Do not attempt to enter route information or adjust the unit while driving. Failure to pay full attention to the operation of your vehicle could result in death, serious injury or property damage. You assume total responsibility and risk for using this device.

GARMIN FMI over the air communication support is provided by the Novatel Wireless UDP or TCP API only. SMS communication with GARMIN FMI is NOT supported.

AT\$GFMI Garmin FMI

AT\$GFMI	Garmin FMI
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to query information about the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=<command>
Write Response	OK
Read Syntax	AT\$GFMI?
Read Response	Startup: 1 Enabled: 1 Product ID: 870 Software Version: 2.50 Unit ID/ESN: 3519941023 Date and Time: 1/9/2009 21:54:49 GMT Protocol Support: P000 L001 A010 A500 D501 A600 D600 A601 D601 A602 D602 A603 D603 A604 D604 A605 D605 A700 D700 A900 A902 A903 A904 A905 D900 A907 D907 D908 D909 D910 A908 D911 A912 D912 A913 D913 A916 A917 D917 A919 A918 D918 OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
Notes	The above is for text mode only.

1.1.1 AT\$GFMICOM DEFINE GARMIN FMI DEVICE PORT

1.1.1 AT\$GFMICOM	This command can be used to configure which UART the modem is to send/receive data to/from the Garmin PND
Command Function	This command can be used to configure which UART the modem is to send/receive data to/from the Garmin PND.
Syntax Query	\$GFMICOM: (1-2)
Syntax	\$GFMICOM: (1-2)
Write Syntax	AT\$GFMICOM=<uart>
Write Response	OK or ERROR
Read Syntax	AT\$GFMICOM?
Read Response	\$GFMICOM: <uart> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
< uart >	Modem uart (1 or 2) to use to connect to Garmin PND. Defaults to 2.
Notes	Only applicable for dual cable devices.

AT\$GFM IPT Define Garmin FMI API Port

AT\$GFM IPT	Define Garmin FMI API Port
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command can be used to configure the modem to send GFMI data to a separate port from other API data that is defined in the \$\$UDPAPI command
Syntax Query	AT\$GFM IPT=?
Syntax	\$GFM IPT: (0-1),(0-65535) OK
Write Syntax	AT\$GFM IPT=<enable>,<gfmi_port>
Write Response	OK
Read Syntax	AT\$GFM IPT?
Read Response	\$GFM IPT:<enable>,<gfmi_port> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<enable>	0Disable sending GFMI data to a separate port 1Enable sending GFMI data to a separate port defined by <gfmi_port>
<gfmi_port>	API port for GFMI data
Notes	N/A
Example	Send GFMI data to port 1735 while UDPAPI data goes to port 1721: AT\$UDPAPI=1721 AT\$GFM IPT=1,1735

AT\$GFMIPW Garmin FMI Feature Enable

AT\$GFMIPW	Garmin FMI Feature Enable
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	Enable the GFMI feature by entering the IMEI specific GFMI password.
Syntax Query	AT\$GFMIPW=?
Syntax	\$GFMIPW: "password" OK
Write Syntax	AT\$GFMIPW="password"
Write Response	OK
Read Syntax	AT\$GFMIPW?
Read Response	\$GFMIPW:<enable> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<enable>	0 = GFMI is not enabled on this modem 1 = GFMI is enabled on this modem
<password>	Eight character alpha-numeric feature password. This password is unique to the modem IMEI. Once the correct password has been entered the feature will be enabled on this modem.
Notes	N/A

AT\$GFMI=[(0)(1)] Garmin FMI Enable/Disable

AT\$GFMI=[(0)(1)]	Garmin FMI Enable/Disable
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to enable or disable communication with the Garmin PND
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=<command>,<A607_Features>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A

AT\$GFMI=[(0)(1)]	Garmin FMI Enable/Disable										
Parameter Values											
<command>	<p>0 =Disable communication with PND</p> <p>1,<A607_Features> = Enable communication with PND</p> <p>Where <A607_Features> is a hex bit mask of the following bit mask values:</p> <table> <thead> <tr> <th>Hex Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>00000001</td><td>Enable Uni-code Support"</td></tr> <tr> <td>00000002</td><td>Enable A607 messages.</td></tr> <tr> <td>00000200</td><td>Enable Driver Passwords</td></tr> <tr> <td>00000400</td><td>Enable Multiple Drivers</td></tr> </tbody> </table>	Hex Value	Description	00000001	Enable Uni-code Support"	00000002	Enable A607 messages.	00000200	Enable Driver Passwords	00000400	Enable Multiple Drivers
Hex Value	Description										
00000001	Enable Uni-code Support"										
00000002	Enable A607 messages.										
00000200	Enable Driver Passwords										
00000400	Enable Multiple Drivers										
Notes	<p>When communications is enabled to the Garmin PND, DTE AT command communication to the modem will not be possible (other than AT\$GFMI=0 - see below) and, the serial port must be connected to the Garmin.</p> <p>To disable communications with the Garmin PND on the Novatel Wireless device over the serial port; disconnect the serial port to the Garmin and connect a DTE device to the Novatel Wireless device. Configure the DTE device for 9600:N,8,1 and enter the command; AT\$GFMI=0. The command will not be echoed. Reconfigure the serial DTE device for 115200:N,8,1. Terminal functionality will then been restored.</p>										

AT\$GFMI=3 Send Non-Acknowledgeable Text Message To The Garmin PND

AT\$GFMI=3	Send Non-acknowledgeable Text Message to the Garmin PND
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to send a non-acknowledgeable text message to the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=3,"Text Message",<type>,<"id">
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<text message>	This is an ASCII string up to 199 characters in length, 201 including the double quotes, and will be delivered to the Garmin PND's inbox.
<type>	0 = Add message to Garmin inbox. 1 = Display message on Garmin immediately
<id>	This is an ASCII string up to 15 characters in length (17 including the double quotes) that uniquely identifies the text message. This id will be used to check "read" status using status command.
Notes	The <type> and <"id"> fields are Garmin V2.0 or higher parameters (A604 protocol) only and ignored on Garmin V1 PNDs

AT\$GFMI=4 Send Acknowledgeable Text Message To The Garmin PND

AT\$GFMI=4	Send Acknowledgeable Text Message to the Garmin PND (FMI v1 only)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to send an acknowledgeable text message to the Garmin PND to which the PND may acknowledge receipt.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=4,"Text Message",<"id">
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<text message>	This is an ASCII string up to 199 characters in length (201 including the double quotes) and will be delivered to the Garmin PND's inbox.
<id>	This is an ASCII string up to 15 characters in length (17 including the double quotes) that uniquely identifies the text message. This id will be sent back to the modem when the Garmin acknowledges this message.
Notes	This is a Garmin V1 command (A602 protocol) and will return ERROR (not supported) if attached to a Garmin V2 PND.

AT\$GFMI=5 Send Answerable Text Message To The Garmin PND

AT\$GFMI=5	Send Answerable Text Message to the Garmin PND (FMI v1 only)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to send an answerable text message to the Garmin PND to which the PND may answer yes or no.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=5,"Text Message",<"id">
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<text message>	This is an ASCII string up to 199 characters in length (201 including the double quotes) and will be delivered to the Garmin PND's inbox.
<id>	This is an ASCII string up to 15 characters in length (17 including the double quotes) that uniquely identifies the text message. This id will be sent back to the modem when the Garmin acknowledges this message.
Notes	This is a Garmin V1 command (A602 protocol) and will return ERROR (not supported) if attached to a Garmin V2 PND

AT\$GFMI=6 Send New Stop To Garmin PND

AT\$GFMI=6	Send New Stop to Garmin PND
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to send a new stop to the Garmin PND
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=6,<stop_id>,<"latitude">,<"longitude">,<"ASCII_id">
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<stop id>	32-bit unsigned integer that uniquely identifies this stop. This value is sent back to the modem when the status of the stop changes on the Garmin PND. As such, the <stop_id > should be unique for every stop sent to the PND.
<longitude>	Longitude, in degrees, of this stop
<latitude>	Latitude, in degrees, of this stop
<ASCII id>	This is an ASCII string that appears as descriptive text in the Garmin PND's stop list. This string can be up to 199 characters in length (201 including the double quotes).
Notes	N/A

AT\$GFMI=7 Manage Stops On Garmin PND

AT\$GFMI=7	Manage Stops on Garmin PND
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to delete, change the status of and rearrange stops on the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=7,<stop_id>,<command>,<index>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<stop id>	32-bit unsigned integer that uniquely identifies this stop. This was specified with AT\$GFMI=6 command.

AT\$GFMI=7	Manage Stops on Garmin PND
<command>	<p>Change to make to the status of the stop Command Description</p> <p>0 = Request status</p> <p>1 = Mark stop as done</p> <p>2 = Mark stop as active</p> <p>3 = Delete stop</p> <p>4 = Move stop in list</p>
<index>	<p>This parameter is specified only when the command is 4. This parameter specifies the index in the PND's stop list to which this stop is to be moved. The PND moves all other stops up or down to accommodate the new position.</p>
Notes	<p>Care must be taken to avoid activating the currently active stop. A limitation on the PND will cause the communication link with the modem to be lost if the currently active stop is activated.</p> <p>If this occurs, the link will be quickly reestablished, and normal operation will resume.</p>

AT\$GFMI=8 Request ETA Of Active Stop From The Garmin PND

AT\$GFMI=8	Request ETA of Active Stop from the Garmin PND
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to request the estimated time of arrival information of the currently active stop. ETA can be reported via an Output Event Message.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=8
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
Notes	N/A

AT\$GFMI=9 Set Auto Arrival Criteria On The Garmin PND

AT\$GFMI=9	Set Auto Arrival Criteria on the Garmin PND
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to disable, enable and change the auto arrival criteria on the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=9,<seconds>,<meters>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<seconds>	Number of seconds the Garmin PND must be within <meters> meters of the stop for the PND to automatically mark the current stop as done and then activate the stop at the next index. When <seconds> is set to 0, the auto activate feature is disabled
<meters>	Number of meters the Garmin PND must be within for <seconds> seconds of the stop for the PND to automatically mark the current stop as done and then activate the stop at the next index
Notes	N/A

AT\$GFMI=10 Delete Stops And/or Text Message On The Garmin PND

AT\$GFMI=10	Delete Stops and/or Text Message on the Garmin PND
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to disable, enable and change the auto arrival criteria on the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=10,<data id>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A

AT\$GFMI=10	Delete Stops and/or Text Message on the Garmin PND
Parameter Values	
<data id>	<p>Data to delete - Garmin Version</p> <p>0 = all stops - V1/V2</p> <p>1 = all messages - V1/V2</p> <p>2 = active navigation route - V2</p> <p>3 = all canned messages - V2</p> <p>4 = all canned replies - V2</p> <p>5 = GPI file - V2</p> <p>6 = all driver ID and status info - V2</p> <p>7 = all data, disables FMI - V2</p> <p>8 = all waypoints - V2.5</p>
Notes	<p>IDs 0-1 are Garmin V1/V2 commands (A603/A604 protocols), IDs 2-7 are Garmin V2 commands (A604) and ID 8 is Garmin V2.5 command (A607) and will return ERROR (not supported) if not attached to appropriate Garmin PND.</p>

AT\$GFMI=13 Enable/Disable Garmin Reporting Position, Velocity And Time

AT\$GFMI=13	Enable/Disable Garmin Reporting Position, Velocity and Time
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to enable or disable the Garmin PND reporting once a second its position, velocity and time.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=13,<enable>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<enable>	49 = enable reporting of position, velocity and time every second. 50 = disable reporting of position, velocity and time.
Notes	<p>Velocity is reported in meters per second.</p> <p>Where 'g' is the value from Garmin for speed, and where t is the converted speed, conversion from meters/sec to kilometers/hr is: $(gm / 1s) * (3600s / 1hr) * (1km / 1000m) = t \text{ km/hr}$ or: $g * 3.6 = t \text{ km/hr}$</p> <p>The conversion from meters per second to miles per hour is: $(gm / 1s) * (3600s / 1hr) * (1mile / 1609m) = t \text{ miles/hr}$ or: $g * 2.237 = t \text{ miles/hr}$</p>

AT\$GFMI=14 Send Canned Response List Bit-Mask To The Garmin PND

AT\$GFMI=14	Send Canned Response List Bit-mask to the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command sets the allowed Canned Responses from a previously set up Canned Response List (set by \$GFMI=16) which is used in conjunction with \$GFMI=15 command.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=14,"Hex bit-mask"
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<hex bit-mask>	<p>Little-endian bitmask representation of Canned Response indexes to allow as possible acknowledgement messages.</p> <p>I.E. "4205" would mean to allow indexes 2, 7, 9 and 11. Assuming that \$GFMI=16 was used to set each index.</p>
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.

AT\$GFMI=15 Send Canned Response Text Message To The Garmin PND

AT\$GFMI=15	Send Canned Response Text Message to the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to send a canned text acknowledgeable text message to the Garmin PND
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=15,"Text Message",<type>,<"id">
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<text message >	This is an ASCII string up to 199 characters in length (201 including the double quotes) and will be delivered to the Garmin PND's inbox
<type>	0 = Add message to Garmin inbox. 1 = Display message on Garmin immediately
<id>	This is an ASCII string up to 15 characters in length (17 including the double quotes) that uniquely identifies the text message. This id will be sent back to the modem when the Garmin acknowledges this message.
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND

AT\$GFMI=16 Set Canned Response List Text In The Garmin PND

AT\$GFMI=16	Set Canned Response List Text in the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to set (add or update) a canned response message in the canned response list in the Garmin PND
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=16,"Response Message",<id>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<response message >	This is an ASCII string up to 49 characters in length (51 including the double quotes) and will be delivered to the Garmin PND's inbox.
<id>	Response id, ranging from 1-200, that represents the canned response list index to add/update.
Notes	<p>Up to 200 canned responses may be stored on the client, and up to 50 of these responses may be specified as allowed for each text message set by \$GFMI=14</p> <p>Canned responses are stored permanently across power cycles.</p> <p>This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND</p>

AT\$GFMI=17 Delete Canned Response List Text In The Garmin PND

AT\$GFMI=17	Delete Canned Response List Text in the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to remove a canned response message in the canned response list in the Garmin PND
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (1-200)
Write Syntax	AT\$GFMI=17,<id>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<id>	Response id, ranging from 1-200, that represents the canned response list index to remove.
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.

AT\$GFMI=18 Set Canned Message List Text In The Garmin PND

AT\$GFMI=18	Set Canned Message List Text in the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to set(add or update) a canned text message in the canned text list in the Garmin PND
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=18,"Canned Message",<id>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<canned message>	This is an ASCII string up to 49 characters in length (51 including the double quotes) and will be delivered to the Garmin PND's inbox.
<id>	Message id, ranging from 1-120, that represents the canned text list index to add/update
Notes	Up to 120 canned messages may be stored on the client Canned messages are stored permanently across power cycles. This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.

AT\$GFMI=19 Delete Canned Message List Text In The Garmin PND

AT\$GFMI=19	Delete Canned Message List Text in the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to remove a canned text message in the canned text list in the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (1-120)
Write Syntax	AT\$GFMI=19, <id>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<id>	Message id, ranging from 1 - 120, that represents the canned text list index to remove.
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND

AT\$GFMI=20 Request Message Status From The Garmin PND

AT\$GFMI=20	Request Message Status from the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to receive the status (via event engine) of a text message previously sent to the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=20, <"id">
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<id>	This is an ASCII string up to 15 characters in length (17 including the double quotes) that uniquely identifies the text message.
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.

AT\$GFMI=21 Sort Stop List In The Garmin PND

AT\$GFMI=21	Sort Stop List in the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to sort all Stops by shortest total distance possible starting from the Garmin PND's current position.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=21
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	N/A
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.

AT\$GFMI=22 Set Driver In The Garmin PND

AT\$GFMI=22	Set Driver ID in the Garmin PND (FMI V2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to set the Garmin PND's Driver ID.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=22, <"id">,<driver index>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<id>	This is an ASCII string up to 49 characters in length (51 including the double quotes).
<driver index>	Ranging from 0 - 2, that represents the driver to modify.
Notes	<p>This is a Garmin V2 command (A604 protocol) and will return error (not supported) if attached to a Garmin V1 PND</p> <p><driver index> parameter only valid for Garmin V2.5 (A607 protocol) and when multiple drivers feature is enabled.</p>

AT\$GFMI=23 Request Driver ID From The Garmin PND

AT\$GFMI=23	Request Driver ID from the Garmin PND (FMI V+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to receive (via event engine) the Garmin PND's Driver ID text.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=23, <driver index>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<driver index>	Driver index, ranging from 0 - 2, that represents the driver to request.
Notes	<p>This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND</p> <p><driver index> parameter only valid for Garmin V2.5 (A607 protocol) and when multiple drivers feature is enabled.</p>

AT\$GFMI=24 Set Driver Status List Text In The Garmin PND

AT\$GFMI=24	Set Driver Status List Text in the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to set (add or update) a driver status text in the driver status list in the Garmin PND
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=24,"Driver Status Text",<id>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<driver status text>	This is an ASCII string up to 49 characters in length (51 including the double quotes) and will be delivered to the Garmin PND's inbox
<id>	Status id, ranging from 1-16, that represents the driver status list index to add/update.
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.

AT\$GFMI=25 Delete Driver Status List Text In The Garmin PND

AT\$GFMI=25	Delete Driver Status List Text in the Garmin PND (FMI v2+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to remove a driver status text in the driver status list in the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (1-16)
Write Syntax	AT\$GFMI=25, <id>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<id>	Status id, ranging from 1-16, that represents the driver status list index to remove
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND

AT\$GFMI=26 Set Driver Status In The Garmin PND

AT\$GFMI=26	Set Driver Status in the Garmin PND (FMI v2 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to set the driver status in the Garmin PND.
Syntax Query	AT\$GFMI=?
Syntax	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=26, <id>,<driver index>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<id>	Status id, ranging from 1-16, that represents the driver status list index to use
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND

AT\$GFMI=27 - Request Driver Status From The Garmin PND (FMI V2/V2.5 ONLY)

AT\$GFMI=27	Request Driver Status from the Garmin PND (FMI V2/V2.5 ONLY)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to receive (via event engine) the driver status in the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-2)
Write Syntax	AT\$GFMI=27, <driver index>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<driver index>	Driver index, ranging from 0 - 2, that represents the driver to request.
Notes	<p>This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND</p> <p><driver index> parameter only valid for Garmin V2.5 (A607 protocol) and when multiple drivers feature is enabled.</p>

AT\$GFMI=28 Set User Interface Text In The Garmin PND

AT\$GFMI=28	Set User Interface Text in the Garmin PND (FMI v2 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to set the user interface text of a particular interface in the Garmin PND
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=28,"Interface Text", <id>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<interface text>	This is an ASCII string up to 49 characters in length (51 including the double quotes).
<id>	Interface id, currently only 0 (Dispatch Interface) is supported.
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND

AT\$GFMI=29 Send Ping To The Garmin PND

AT\$GFMI=29	Send Ping to the Garmin PND (FMI v2 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to send a PING notification to the Garmin PND. Garmin will respond with PING via event engine.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=29
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
Notes	This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND

AT\$GFMI=30 - Set Message Throttling In Garmin PND (FMI V2/V2.5 ONLY)

AT\$GFMI=30	Set Message Throttling in the Garmin PND (FMI V2/V2.5 ONLY)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to enable/disable unsolicited message protocols in the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=30,<id>,<state>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<id>	<p>Message protocol identifier.</p> <p>Identifier Description</p> <p>36 = Client to Server Open Text Message</p> <p>52 = Refresh Canned Response Text</p> <p>65 = Message Status</p> <p>84 = Refresh Canned Message Text</p> <p>307 = Waypoint Deleted</p> <p>513 = ETA</p> <p>529 = Stop Status</p> <p>608 = Ping</p> <p>2052 = Refresh Driver Status List</p> <p>2065 = Driver ID Update</p>

AT\$GFMI=30	Set Message Throttling in the Garmin PND (FMI V2/V2.5 ONLY)
	2081 = Driver Status Update
<state>	0 = disable (Throttled) 1 = enable (Not Throttled)
Notes	<p>This is a Garmin V2 command (A604 protocol) and will return error (not supported) if attached to a Garmin V1 PND.</p> <p>Clients that report A605 as part of their protocol support data will have certain protocols throttled by default. Clients that report A604 but not A605 will have all protocols enabled by default.</p> <p>The Message Throttling Query Protocol is only supported on clients that report A605 as part of their protocol support data (AT\$GFMI?) and will return ERROR (not supported) if attached to a Garmin PND that does not support A605.</p>

AT\$GFMI=31 Request Message Throttling Status In The Garmin PND

AT\$GFMI=31	Request Message Throttling Status in the Garmin PND (FMI v2 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to receive (via event engine) the message throttling statuses in the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=31
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
Notes	<p>This is a Garmin V2, A605 protocol command.</p> <p>The Message Throttling Query Protocol is only supported on clients that report A605 as part of their protocol support data (AT\$GFMI?) and will return ERROR (not supported) if attached to a Garmin V1 PND and Garmin V2 PNDs that do not support A605.</p>

AT\$GFMI=32 Send POI File From FFS To Garmin PND

AT\$GFMI=32	Send POI file from FFS to Garmin PND (FMI v2 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to send POI file that was previously placed into the modem's FFS to the Garmin PND. Transfer completion will result in unsolicited \$GFMI: response.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=32,"FFS POI file","File Info"
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Unsolicited Response	<p>0 = FFS POI file to Garmin PND transfer completed successfully.</p> <p>1 = FFS POI file to Garmin PND transfer CRC error. Transfer failed.</p> <p>2 = Insufficient space in Garmin PND for FFS POI file. Transfer failed.</p> <p>3 = Invalid/corrupt POI file.</p> <p>4 = Severe FFS POI file to Garmin PND transfer error. Restart transfer if desired.</p> <p>5 = FFS POI file to Garmin PND transfer aborted. NOTE: will also receive this for AT\$GFMI=34</p> <p>6 = FFS POI file read error.</p>
Parameter Values	

AT\$GFMI=32	Send POI file from FFS to Garmin PND (FMI v2 +)
<FFS POI file text>	Filename of file stored in modem FFS. This is an ASCII string up to 16 characters in length (18 including the double quotes).
<File Info text>	User defined information text to associate with the file to transfer to Garmin PND. This is an ASCII string up to 16 characters in length (18 including the double quotes).
Notes	<p>This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.</p> <p>For OTA POI file transfer related commands, unsolicited status responses are sent from the modem instead of Output Event messages. (I.e. \$GFMI: <POI cmd>, <status/info>)</p>

AT\$GFMI=33 Query POI File From FFS To Garmin PND Transfer Status

AT\$GFMI=33	Query POI file from FFS to Garmin PND Transfer Status (FMI v2 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to receive (via unsolicited \$GFMI: response) the bytes transferred/byte total status of the transferring POI file.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=33
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Unsolicited Response	Bytes transferred status of the FFS POI file to Garmin PND transfer. <bytes transferred>/<file byte total>
Parameter Values	
Notes	<p>This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.</p> <p>For OTA POI file transfer related commands, unsolicited status responses are sent from the modem instead of Output Event messages. (I.e. \$GFMI: <POI cmd>, <status/info>)</p>

AT\$GFMI=34 Stop POI File From FFS To Garmin PND Transfer

AT\$GFMI=34	Stop POI file from FFS to Garmin PND Transfer (FMI v2 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to stop/abort a FFS POI file to Garmin PND transfer. Transfer stop/abort will result in unsolicited \$GFMI: response.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=34
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
Notes	<p>This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.</p> <p>See appendix B for unsolicited \$GFMI: responses.</p>

AT\$GFMI=35 Query Garmin PND POI File Info

AT\$GFMI=35	Query POI file info on the Garmin PND (FMI v2 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to receive (via unsolicited \$GFMI: response) the byte total and related user defined file info of the current FMI POI file stored on the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=35
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Unsolicited Response	Garmin PND POI file size and associated file information text. <file size>, <file info text>
Parameter Values	
Notes	<p>This is a Garmin V2 command (A604 protocol) and will return ERROR (not supported) if attached to a Garmin V1 PND.</p> <p>Transfer completion will result in unsolicited \$GFMI: response.</p> <p>For OTA POI file transfer related commands, unsolicited status responses are sent from the modem instead of Output Event messages. (I.e. \$GFMI: <POI cmd>, <status/info>)</p>

AT\$GFMI=36 Delete Text Message On The Garmin PND

AT\$GFMI=36	Delete Text Message on the Garmin PND (FMI v2.5 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to delete a message stored on the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=36,<"id">
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<id>	This is an ASCII string up to 15 characters in length (17 including the double quotes) that uniquely identifies the text message to delete.
Notes	This is a Garmin V2.5 command (A607) and will return ERROR (not supported) if not attached to appropriate Garmin PND with A607 features enabled.

AT\$GFMI=37 Set Waypoint On The Garmin Pnd

AT\$GFMI=37	Set Waypoint on the Garmin PND (FMI v2.5 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to delete a message stored on the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=37,<id>,<symbol>,<cats>,<"lat">,<"long">,<"name">,<"comment">
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<id>	Waypoint id (0 - 65535) to uniquely identify the waypoint to add or update
<symbol>	Map symbol identifier to display on PND. See Garmin website for symbol table.
<cats>	Category bitmask (16 bit hexadecimal) of the categories to associate with this waypoint.
<"lat">	Latitude, in degrees, for this waypoint
<"long">	Longitude, in degrees, for this waypoint

AT\$GFMI=37	Set Waypoint on the Garmin PND (FMI v2.5 +)
<"name">	This is an ASCII string up to 30 characters in length (32 including the double quotes) that represents name of the waypoint.
<"comment">	This is an ASCII string up to 50 characters in length (52 including the double quotes) that will add a comment to the waypoint.
Notes	This is a Garmin V2.5 command (A607) and will return ERROR (not supported) if not attached to appropriate Garmin PND with A607 features enabled.

AT\$GFMI=38 Delete Waypoint On The Garmin Pnd

AT\$GFMI=38	Delete Waypoint On The Garmin Pnd (FMI v2.5 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to delete a waypoint stored on the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=38,<id>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<id>	Waypoint id (0 - 65535) to uniquely identify the waypoint to delete.
Notes	This is a Garmin V2.5 command (A607) and will return ERROR (not supported) if not attached to appropriate Garmin PND with A607 features enabled.

AT\$GFMI=39 Set Waypoint Category On The Garmin PND

AT\$GFMI=39	Set Waypoint Category on the Garmin PND (FMI v2.5 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to set (add or update) a waypoint category stored on the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=39,<cat>,<"name">
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<cat>	Category number (0 - 15) to set.
<"name">	This is an ASCII string up to 16 characters in length (18 including the double quotes) that represents name of the waypoint category.
Notes	This is a Garmin V2.5 command (A607) and will return ERROR (not supported) if not attached to appropriate Garmin PND with A607 features enabled.

AT\$GFMI=40 Delete Waypoints By Category On The Garmin PND PND

AT\$GFMI=40	Delete Waypoints by Category on the Garmin PND (FMI v2.5 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to delete all waypoints stored on the Garmin PND based upon an associated category.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=40,<cats>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<cat>	Category bitmask (16 bit hexadecimal) of the categories.
Notes	This is a Garmin V2.5 command (A607) and will return ERROR (not supported) if not attached to appropriate Garmin PND with A607 features enabled.

AT\$GFMI=41 Garmin Pnd Initiated Driver Id Update Confirmation

AT\$GFMI=41	Garmin Pnd Initiated Driver Id Update Confirmation (FMI v2.5 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows user to respond to PND initiated Driver ID Update request (Output Event Category 139-142, Param2 bit 5 message).
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=41,<id>,<driver index>,<allow>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<id>	Change ID from the Driver ID Update request output event sent from PND
<driver index>	Driver Index from the Driver ID Update request output event sent from PND
<allow>	1 = allow update 0 = reject update
Notes	This is a Garmin V2.5 command (A607 protocol) and will return error (not supported) if not attached to appropriate Garmin PND with A607 features enabled.

AT\$GFMI=42 Set PND Safe Mode

AT\$GFMI=42	Set PND Safe Mode. (FMI V2.6+)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to enable or disable safe mode in the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=42,<safeModeMPH>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<safeModeMPH>	Speed in miles per hour at which safe mode will be activated (0-5). Input -1 to disable safe mode.
Notes	This is a Garmin FMI V2.6 command (A606 protocol) and will return ERROR (not supported) if attached to a Garmin V2.5 or earlier PND.

AT\$GFMI=43 Set The Speed Limit Alert On The Garmin PND

AT\$GFMI=43	Set the Speed Limit Alert on the Garmin PND (FMI V2.7 +)
 Licensed Feature	This command is not a standard feature and requires additional licensing. For purchasing information, contact your Novatel Wireless sales representative.
Command Function	This command allows the user to set the speed limit alert in the Garmin PND.
Syntax Query	AT\$GFMI=?
Response	\$GFMI: (0-1)
Write Syntax	AT\$GFMI=43,<mode>,<timeOver>,<timeUnder>,<alertUser>,<thres hold>
Response	OK
Read Syntax	N/A
Response	N/A
Execute Syntax	N/A
Response	N/A
Parameter Values	
<mode>	Enable or disable speed limit alert (0-2). 0 = Car 1 = Off 2 = Truck
<timeOver>	Time in seconds since threshold is exceeded after which speeding event starts (0-255).
<timeUnder>	Time in seconds since speed is decreased below threshold is exceeded after which speeding event ends (0-255).

AT\$GFMI=43	Set the Speed Limit Alert on the Garmin PND (FMI V2.7 +)
<alertUser>	Enable or disable driver notification(0-1). 0 = Do not notify driver 1 = Notify driver with an audible tone when the speeding event starts .
<threshold>	Speed in mph above (positive) or below (negative) the speed limit when the driver is considered speeding (-50 to +50).
Notes	This is a Garmin FMI V2.7 command (A608 protocol) and will return ERROR (not supported) if attached to a Garmin V2.6 or earlier PND.

FOTA Commands

AT\$FOTACFG Configure Firmware Upgrade

AT\$FOTACFG	Configure Firmware Upgrade
Command Function	This command allows the user to configure the modem Firmware Over The Air (FOTA) Server.
Syntax Query	AT\$FOTACFG=?
Syntax	\$FOTACFG: "host", (0-65535), "username", "password", (0,1), (0-20), (0,1), (0,1), (0,1) OK
Write Syntax	AT\$FOTACFG=<"ftpServerHostname">,<ftpPort>,<"ftpUsername">,<"ftpPassword">,<ftpMode>,<retries>,<reportMode>,<upgradeMode>,<upgradeStatus>
Write Response	OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<ftpServerHostname>	Either Fully Qualified Domain Name (FQDN) or a dotted-decimal IP address of the FTP server. The FQDN is resolved by DNS immediately prior to opening IP connection to FTP server. The FQDN may be up to a maximum of 63 characters. Default value: none.
<ftpPort>	The TCP port number on the FTP server. Port range: 0 - 65535, Default value: 21
<ftpUsername>	FTP login name on the FTP server. The username may be up to a maximum of 31 characters. Default value: none.
<ftpPassword>	The FTP password for the FTP user. The password may be an empty string if the FTP user does not have a password. The password may be up to a maximum of 31 characters. Default value: none.

AT\$FOTACFG	Configure Firmware Upgrade
<ftpMode>	The FTP mode to use for data connections. FTP data connections may be active or passive. Passive mode is generally better to use with FTP servers located behind firewalls. Values: 0 = active, 1 = passive. Default value: 0 (active mode).
<retries>	This is the maximum number of FTP file resumes to attempt before giving up on original AT\$FOTAGET command. The range of retries is 0 – 20. Default Value: 0.
<reportMode>	The reporting mode is used to control the level of status reporting during the FOTA process. Normal reporting mode sends only critical status updates, extended reporting mode sends informative and critical status updates. The command parameters are: 0 = normal reporting, 1 = extended reporting. Default value: 0 (normal reporting mode).
<upgradeMode>	The system behavior following successful FOTA file transfer to modem. The upgrade Mode may be either Automatic or Manual. Auto mode will immediately initiate FOTA upgrade when file transfer completes. Manual mode will wait after file transfer until an explicit upgrade command is issued (AT\$FOTAUPG). The command line parameters are: 0 = auto, 1 = manual. Default value: 0 (automatic mode).
<upgradeStatus>	Controls the generation of FOTA Finish status. FOTA Finish status is reported after the modem reboots from a FOTA upgrade or as a result of a fatal error. This status is only returned OTA. The command line parameters are 0 = disabled and 1 = enabled. FOTA finish status is disabled by default.
Notes	Refer to Novatel Wireless Application Note ENF000AN002 for more information on FOTA operations

AT\$FOTAGET Get Firmware Upgrade OTA

AT\$FOTAGET	Get Firmware Upgrade OTA
Command Function	This command will initiate a connection to the FOTA Server to download the FOTA Delta File. The FOTA Server is defined with the \$FOTACFG command.
Syntax Query	AT\$FOTAGET=?
Syntax	\$FOTAGET: "remotefilename" OK
Write Syntax	AT\$FOTAGET=<"remotefilename">
Write Response	OK
Read Syntax	AT\$FOTAGET?
Read Response	\$FOTAGET: <fotaState>,<"remotefilename">,<retriesRemaining>,<appErrorCode>,<errorCode>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<fotaState>	Current FOTA mode indicating if FOTA is in the process of transferring a FOTA file. 0 = IDLE 1 = BUSY
<"remotefilename">	The upgrade package file name.

AT\$FOTAGET	Get Firmware Upgrade OTA
<retriesRemaining>	The number of FTP resumes remaining before terminating file transfer. This number starts with the retries specified in the AT\$FOTACFG command and is decremented for each FOTA restart which occurs.
<appErrorCode>	<p>Status of the last FOTA result.</p> <p>0 = success</p> <p>1 = failed to access package data</p> <p>2 = flash erase failed</p> <p>3 = flash write of package failed</p> <p>6 = package version or signature does not match</p> <p>7 = package version or signature does not match</p> <p>8 = could not install package in flash</p> <p>9 = previous version present and pkg Status pending</p> <p>10 = not enough space to write file</p> <p>11 = flash file open failed</p> <p>12 = flash file read failed or did not read requested size</p> <p>13 = flash file write failed</p> <p>14 = fota file larger than max allowed</p> <p>15 = flash file status failed</p> <p>16 = flash file seek failed</p> <p>17 = flash file close failed</p> <p>18 = failed to get flash sector address</p> <p>19 = flash file erase failed</p> <p>20 = checksum verification failed</p> <p>21 = failed to set update flag</p>
Notes	Refer to Novatel Wireless Application Note ENF000AN002 for more information on FOTA operations

AT\$FOTAUPG Upgrade Current Firmware

AT\$FOTAUPG	Upgrade Current Firmware
Command Function	This function is used to initiate the FOTA upgrade process. It assumes that a binary delta file exists in the FFS with the name “current_delta.bin”. This file will typically be moved to the FFS via FTP functions or other FOTA specific functions.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$FOTAUPG
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes	Refer to Novatel Wireless Application Note ENF000AN002 for more information on FOTA operations
Example	N/A

UART Application Commands

AT\$UAEN UART Application Enable

AT\$UAEN	UART Application Enable
Command Function	This command is used to enable and disable the UART Application
Syntax Query	AT\$UAEN=?
Syntax	\$UAEN: (0-1) OK
Write Syntax	AT\$UAEN=<enable>
Write Response	OK or ERROR
Read Syntax	AT\$UAEN?
Read Response	\$UAEN: <enable> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<enable>	0 = UART Application is disabled 1 = UART Application is enabled
Notes:	When AT\$UAEN=1, the command AT\$MSGSEND=0,"" will send the output out the UART using the settings set in AT\$UAUCFG.

AT\$UALIST UART Application List

AT\$UALIST	UART Application List
Command Function	This command is used to set a list of expected UART Application messages received.
Syntax Query	AT\$UALIST=?
Syntax	AT\$UALIST: (1-100),(0-1),("Data Message")
Write Syntax	AT\$UALIST =<NUMBER>,<INPUT>,<MESSAGE>
Write Response	OK or ERROR
Read Syntax	AT\$UALIST?
Read Response	\$UALIST: <NUMBER>,<INPUT>,<MESSAGE>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<NUMBER>	Message number used for input event 211
<INPUT>	0 = ASCII 1 = Binary
<MESSAGE>	The expected message received by the modem
Notes:	N/A

AT\$UALTO UART Application Timeout

AT\$UALTO	UART Application Timeout
Command Function	This command is used to set a timeout value for when to fire input event 211 with a value of -1
Syntax Query	AT\$UALTO=?
Syntax	AT\$UALTO: (0-3600)
Write Syntax	AT\$UALTO =<TIMEOUT>
Write Response	OK or ERROR
Read Syntax	AT\$UALTO?
Read Response	\$UALTO: <TIMEOUT>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<TIMEOUT>	Timeout value (in seconds) 0 = Disabled
Notes:	N/A

AT\$UAMCFG UART Application Modem Config

AT\$UAMCFG	UART Application Modem Config
Command Function	This command is used to set the header and footer to be received by the modem for the UART Application
Syntax Query	AT\$UAMCFG=?
Syntax	AT\$UAMCFG: (0-1),("Header"),("Footer")
Write Syntax	AT\$UAMCFG =<INPUT>,<HEADER>,<FOOTER>
Write Response	OK or ERROR
Read Syntax	AT\$UAMCFG?
Read Response	\$UAMCFG: <INPUT>,<HEADER>,<FOOTER>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<INPUT>	0 = ASCII 1 = Binary
<HEADER>	The header of all messages to be processed
<FOOTER>	The footer of all messages to be processed
Notes:	N/A

AT\$UAUCFG UART Application UART Config

AT\$UAUCFG	UART Application UART Config
Command Function	This command is used to set the UART settings for the UART Application that is connected to the UART.
Syntax Query	AT\$UAUCFG=?
Syntax	AT\$UAUCFG: (300,600,1200,2400,4800,9600,14400,19200,28800,38400,57600,-115200,230400),(7-8),(0-2),(1-2)
Write Syntax	AT\$UAUCFG =<BAUD>,<DATA BITS>,<PARITY>,<STOP BITS>
Write Response	OK or ERROR
Read Syntax	AT\$UAUCFG?
Read Response	\$UAUCFG: <BAUD>,<DATA BITS>,<PARITY>,<STOP BITS>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<BAUD>	Baud Rate
<DATA BITS>	Number of data bits
<PARITY>	0 = None 1 = Even 2 = Odd
<STOP BITS>	Number of stop bits
Notes:	N/A

AT\$UAUCOM Set UART Application Port

AT\$UAUCOM	Set UART Application Port
Command Function	This command can be used to configure which UART the modem is to receive data from the Uart Application.
Syntax Query	AT\$UAUCOM=?
Syntax	\$UAUCOM: (1-2) OK
Write Syntax	AT\$UAUCOM=<uart>
Write Response	OK or ERROR
Read Syntax	AT\$UAUCOM?
Read Response	\$UAUCOM: <uart> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<uart>	Modem UART (1 or 2) to use to connect to the UART Application. Default value is 1.
Notes:	
Example:	AT\$UAUCOM=2 OK

Miscellaneous Commands

AT\$ATPASSWD Set Authorization For AT Commands For Serial, SMS And API

AT\$ATPASSWD	Set authorization for AT commands for serial, SMS and API								
Command Function	This command allows the user to enable or disable authorization for AT commands for the serial, SMS and API. It also sets the password required to run this command								
Syntax Query	AT\$ATPASSWD=?								
Syntax	AT\$ATPASSWD: ("oldpasswd",mask "newpasswd") OK								
Write Syntax	AT\$ATPASSWD= <"oldpasswd","newpasswd">								
Write Response	OK								
Read Syntax	N/A								
Read Response	N/A								
Execute Syntax Execute Response	AT\$ATPASSWD=<"passwd",mask>								
Unsolicited Response	N/A								
Response	N/A								
Parameter Values									
<oldpasswd>	Specified when the password is being changed.								
<newpasswd>	This is the value of the new password and is specified only when the password is being changed. It must be no more than eight characters in length and must be enclosed in double quotes.								
<passwd>	Specified when changing the AT command authorization mask.								
<mask>	<p>Bit mask specifying which interfaces will be authorized to enter AT commands. Each bit specifies one interface as enumerated in the table below.</p> <table> <tr> <td>Bit Value</td><td>Interface</td></tr> <tr> <td>1</td><td>Serial Port</td></tr> <tr> <td>2</td><td>SMS</td></tr> <tr> <td>4</td><td>API</td></tr> </table>	Bit Value	Interface	1	Serial Port	2	SMS	4	API
Bit Value	Interface								
1	Serial Port								
2	SMS								
4	API								

AT\$ATPASSWD	Set authorization for AT commands for serial, SMS and API
	To select multiple items to authorize, add the bit values of each interface to be authorized. To authorize API and SMS only, the mask value is 6 (4 + 2). AT commands entered over the serial port will not execute and will reply with ERROR.
Notes:	N/A
Example:	To set a password on a device that previously had no set \$ATPASSWD enter: AT\$ATPASSWD="", "1234" To change a previously set \$ATPASSWD password enter: AT\$ATPASSWD-D="1234", "5678"

AT\$EXTRST External Reset

AT\$EXTRST	External Reset
Command Function	This command is used to perform a modem reset. Unlike the AT\$RESET command (which is an internal modem reset), this command uses the MSP430 to perform an external reset.
Syntax Query	N/A
Syntax	N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$EXTRST
Execute Response	OK
Unsolicited Response	N/A
Parameter Values	N/A
Notes:	N/A

AT\$HBRST Automatic Modem Reset

AT\$HBRST	Automatic Modem Reset
Command Function	This command allows the user to program the reset interval and enable/disable ignition resets on supported devices.
Syntax Query	AT\$HBRST=?
Syntax	\$HBRST:(0-168),(0-1*),(0-1),(0-1*) OK
Write Syntax	AT\$HBRST=<hours>,<ign rst inhibit>,<motion>,<ignition>
Write Response	OK
Read Syntax	AT\$HBRST?
Read Response	\$HBRST:<hours>,<ign rst inhibit>,<motion>,<ignition> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<hours>	0 = Automatic reset turned off 1-168 = Number of hours until the modem resets
<ign rst inhibit>	0 = inhibit off (default). Modem will be reset when ignition on event is detected. 1 = Inhibit reset upon ignition on Note: If the device is being reset by ignition input (switched power), the frequency of the heartbeat reset can be set as high as 168 hours. If ignition resets are inhibited, the maximum heartbeat reset allowed is 24 hours. Therefore, if <ign rst inhibit> = 1, <hours> must = (1-24) * Note: On devices that do not support ignition detection, this parameter value can only be set to 1.

AT\$HBRST	Automatic Modem Reset
<motion>	<p>0 = Postpone automatic reset when <hours> threshold is reached if device is in 'driving' motion state until mode transitions to 'parked' motion state.</p> <p>1= Ignore motion state when implementing automatic reset logic.</p>
<ignition>	<p>0 = Postpone automatic reset when <hours> threshold is reached if device is in 'ignition on' state until mode transitions to 'ignition off' state.</p> <p>1 = Ignore ignition state when implementing automatic reset logic.</p> <p>* Note: On devices that do not support ignition detection, this parameter value can only be set to 1.</p>
Notes	<p>* On devices that do not support ignition detection (such as the MT 1000), the only acceptable value for the <ign rst inhibit> and <ignition> parameters is 1.</p> <p>The time until the modem resets is an approximate value.</p> <p>If the device is being reset by ignition input (switched power), the frequency of the heartbeat reset can be set as high as 168 hours. If ignition resets are inhibited, the maximum heartbeat reset allowed is 24 hours.</p>

AT\$LPMTO Low Power Mode Time Out

AT\$LPMTO	Low Power Mode Time Out
Command Function	This command allows the user to set a maximum time that the modem can be in Low Power Mode, regardless of the wake reasons in the \$OFF command.
Syntax Query	AT\$LPMTO=?
Syntax	\$LPMTO: (0-255) OK
Write Syntax	AT\$LPMTO=<timeout>
Write Response	OK
Read Syntax	AT\$LPMTO?
Read Response	\$LPMTO: <timeout> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<timeout>	1-255 = Modem is held in the power off state for no more than the number of 6-hour periods specified (ie: 1=6 hours, 2=12 hours, 3=18 hours, etc...) 0 = Host is held in the power off state for no more than 64 days (256 * 6 hours = 64 days)
Notes:	Default = 120 (30 days).

AT\$OFF Power Off Command

AT\$OFF	Power Off Command
Command Function	This command allows the user to perform a software-controlled shutdown. The modem gracefully deregisters from the network before powering down so it may take a few seconds before current consumption decreases.
Syntax Query	AT\$OFF=?
Syntax	\$OFF: (1-00003FFF),(0-92160) OK N/A
Write Syntax	N/A
Write Response	N/A
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$OFF=<off_cfg>,<off_mins>
Execute Response	None, GSM modem powers down
Unsolicited Response	N/A
Parameter Values	
<off_cfg>	<p>Hexadecimal bit mask with instructions for actions to take as part of powering down modem:</p> <p>00000001 = wake modem when ignition is on (command will return ERROR if ignition is already on)</p> <p>00000002 = wake modem when ignition if off (command will return ERROR if ignition is already off)</p> <p>00000004 = wake modem when external power is present (command will return ERROR if external power is already present)</p> <p>00000008 = wake modem when operating on battery power (command will return ERROR if already operating on battery power)</p> <p>00000010 = wake modem when motion is detected (command will return ERROR if already in moving state)</p> <p>00000020 = wake modem when not moving (command will return ERROR if already in stopped state)</p>

AT\$OFF	Power Off Command
	<p>00000040 = wake modem when GPIO1 is high (command will return ERROR if GPIO1 is already high)</p> <p>00000080 = wake modem when GPIO1 is low (command will return ERROR if GPIO1 is already low)</p> <p>00000100 = wake modem when GPIO9 is high (command will return ERROR if GPIO9 is already high)</p> <p>00000200 = wake modem when GPIO9 is low (command will return ERROR if GPIO9 is already low)</p> <p>00000400 = wake modem when GPIO10 is high (command will return ERROR if GPIO10 is already high)</p> <p>00000800 = wake modem when GPIO10 is low (command will return ERROR if GPIO10 is already low)</p> <p>00001000 = wake modem when RTCALRM expires</p> <p>00002000 = Clear iButton value from persistent memory. NOTE: This bit is not defined as a reason to wake modem.</p>
<off_mins>	<p>1-2147483647 : Wake modem after this number of minutes has elapsed Any other value : ignored</p> <p>This time out is independent of the \$RTCALRM wakeup specified in <off_cfg> and the 'dead man' timeout specified in \$LPMTO.</p>
Notes	At least one wake reason must be selected before the \$OFF command will be successfully executed. Wake reasons may be selected by the value provided in the <off_cfg> parameter or by providing a value greater than zero in the <sleep_minutes> parameter. The command will return ERROR if no wake reason is selected.
Example:	To set up the modem to trigger the RTCALRM at 3:30 AM every day (waking up if necessary) or to wake up when motion is detected: AT\$RTCALRM=,,,3,30,0,1440 AT\$OFF=00001010,0

AT\$PWRMSG Power On Message

AT\$PWRMSG	Power On Message
Command Function	This command allows the user to change the default Power up message.
Syntax Query	AT\$PWRMSG=?
Syntax	\$PWRMSG: "pwr up msg"
Write Syntax	AT\$PWRMSG="new pwr up message"
Write Response	OK
Read Syntax	AT\$PWRMSG?
Read Response	\$PWRMSG: "AT-Command Interpreter ready"
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
<message>	New Power up Message

AT\$PWRMSG	Power On Message
<0,1>	Optional parameter that will remove the message altogether. Please see the examples at the end of this command.
Notes	AT\$PWRMSG="" will restore the power up message to the factory default. The power up message can be a maximum of 40 characters.
Example	<p>AT\$PWRMSG? \$PWRMSG: "AT-Command Interpreter ready" AT\$RESET AT-Command Interpreter ready AT\$PWRMSG ="Ready To Go" AT\$PWRMSG? \$PWRMSG: "Ready To Go" AT\$RESET Ready To Go AT\$PWRMSG ="" AT\$PWRMSG? \$PWRMSG: "AT-Command Interpreter ready"</p> <p>The second parameter is optional. AT\$PWRMSG="New Powerup Msg" sets 'New Powerup Msg' as powerup msg AT\$PWRMSG="New Powerup Msg",0 same as previous AT\$PWRMSG=,1 removes the powerup msg AT\$PWRMSG="some text",1 removes the powerup msg (ignores text) AT\$PWRMSG="" sets powerup msg back to default string AT\$PWRMSG="",0 same as previous</p>

AT\$USRFLG(x) User Flag Status Control

AT\$USRFLG(x)	User Flag Status Control
Command Function	This command allows the user to set the state of the specified User Flag 1-3 which will be represented by Output Event GPIO Status bits 13-15 respectively
Syntax Query	AT\$USRFLG(x)=?
Syntax	\$USRFLG(x): (0-1) OK
Write Syntax	AT\$USRFLG(x)=<status>
Write Response	OK
Read Syntax	AT\$USRFLG(x)?
Read Response	\$USRFLG(x): <current status>
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A
Parameter Values	
(x)	User Flag Number Range: 1-3
<status>	Status Range: 0-1
Notes	

AT\$V Display Smart Agent Configuration Settings

AT\$V	Display Smart Agent Configuration Settings
Command Function	This command allows the user to view the Smart Agent configuration settings. The settings for a single subsystem or for the entire Smart Agent application may be displayed.
Syntax Query	AT\$V=?
Syntax	(ALL, SYS, DATA, EVENT, IO, VOICE[, GFMI][, GPS][, OBD][, UAPP]) OK
Write Syntax	AT\$V=<subsystem>
Write Response	<subsystem configuration values> OK
Read Syntax	N/A
Read Response	N/A
Execute Syntax	AT\$V
Execute Response	<configuration values for all subsystems> OK
Unsolicited Response	N/A
Parameter Values	
<subsystem>	Select a single subsystem to limit the response or select "ALL" to view the entire Smart Agent configuration. Select one of the following subsystem values: ALL, SYS, DATA, EVENT, IO, VOICE, GFMI, GPS, UAPP.
Notes	Some subsystems do not apply to all products. i.e. some products do not support Voice, GFMI and/or GPS.

AT%SLEEP Select Level Of Sleep Mode

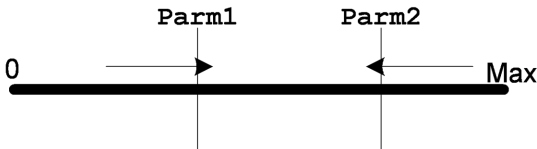

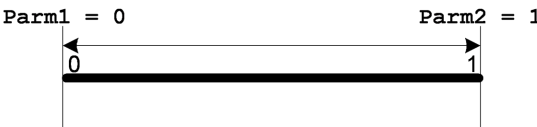

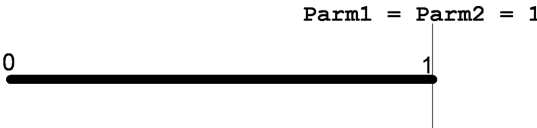

AT%SLEEP	Select level of sleep mode
Command Function	This command allows the user to select the level of sleep the modem will enter during periods of inactivity.
Syntax Query	AT%SLEEP=?
Syntax	%SLEEP: (0-4) OK
Write Syntax	AT%SLEEP=<mode>
Write Response	OK
Read Syntax	AT%SLEEP?
Read Response	%SLEEP: <mode> OK
Execute Syntax	N/A
Execute Response	N/A
Unsolicited Response	N/A

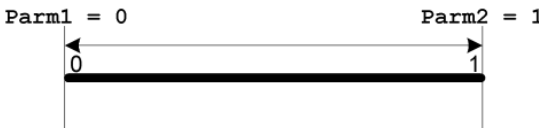

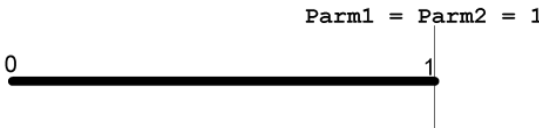

AT%SLEEP	Select level of sleep mode
Parameter Values	
< mode >	<p>0 = no sleep</p> <p>1= Small</p> <p>2 = Big</p> <p>3 = Big + Deep</p> <p>4 = Small+ Big +Deep</p> <p>No Sleep: all sections of the modem will remained powered on and ready for use.</p> <p>Small: All functions are active and perform normally. Some peripherals are in sleepstate.</p> <p>Big: The radio and peripherals are asleep. The UART is awake and able to receivedata on the serial port. The radio will wakeup periodically check for pages form thewireless Network.</p> <p>Deep: only the 32 MHZ clock and a small portion of the DSP are running, all othersections of the module are in a sleep state. The UART is asleep, but will wakeup with the first character received (this character will be lost). The modem willwakeup periodically to check for incoming pages form the wireless carrier.</p>
Notes	<p>If %SLEEP <mode> of 3 or 4 is selected, and the modem has entered Deep sleep, the UART will miss the first character that is sent over the serial port. This first character will wake up the UART and subsequent characters will be accepted by the UART. Default setting is 2</p>

Event Tables

Event Type

The <event type> parameter defines the type of event: Input or Output. An Input event can be defined as: Transition, Occurrence, or Input. The Output event is executed when input event conditions are met.

Value	Type of event	Description
0	Transition Trigger	<p>A transition Trigger is defined as an input condition, defined by <event category>, whose value was previously <parm1> or less is now greater than <parm1> and less than <parm2> or was greater or equal to <parm2> is now less than <parm2> but greater than <parm1>. The output event would be executed when an input <event category> requirements are satisfied or transition to the value set by <parm1> and <parm2> when they are equal. <parm1> should be the min value and <parm2> should be the max value.</p> <p>Example 1:</p>  <p>An output event will be executed when the value of an input event exceeds <Parm1> (previously it was <Parm1> or less) or decreases to a value less than <Parm2> (previously it was <Parm2> or greater).</p> <p>Example 2:</p>  <p>An output event will be executed when the value of an input event is 0 (previously it was anything else but 0) and <Parm1> along with <Parm2> is set to 0.</p>
		<p>Example 3:</p>  <p>An output event will be executed when the value of an input event is 1 (previously it was anything else but 1) and <Parm1> along with <Parm2> is set to 1.</p>
1	Occurrence Trigger	<p>An Occurrence Trigger is defined as an input condition, defined by <event category>, whose current value is greater than or equal to <parm1> and less than or equal to <parm2>.</p>

Value	Type of event	Description
		<p>The output event would be executed when an input <event category> requirements are satisfied or transition to the value set by <parm1> and <parm2> when they are equal. <parm1> should be the min value and <parm2> should be the max value.</p> <p>Example 1:</p>  <p>An output event will be executed when the current value of an input event is between <Parm1> and <Parm2> including boundary conditions.</p> <p>Example 2:</p>  <p>An output event will be executed when the value of the input event changes from 0 to 1 or vice-versa.</p>
		<p>Example 3:</p>  <p>An output event will be executed when the value of the input event is 1 and <Parm1> along with <Parm2> is set to 1.</p>
2	Input Trigger	<p>An Input Trigger is defined as an input condition, defined by <event category>, that should be used as a logical AND condition to another input condition defined as Transition Trigger or an Occurrence Trigger.</p> <p>An Output event is not triggered when Input Trigger condition is valid. The input event, defined as Input Trigger, is valid when within the event range defined by <parm1> and <parm2> or when <parm1> and <parm2> are equal.</p>

Value	Type of event	Description
3	Output	<p>An Output event is executed when all input event conditions (defined as Transition Trigger, Occurrence Trigger, or Input Trigger) for that particular <event group> are met.</p> <p><i>Output Event Note: ASCII messages sent by the Event Engine have a maximum length of 250 characters (not including the optional header). Any ASCII messages exceeding this length are truncated.</i></p>

Event Engine

The Novatel Wireless Event Engine is a proprietary state machine that can be initiated by one or many triggering input events (which can be logically “ANDed” and/or “ORed”) to generate one or many pre-defined outputs. The Event Engine allows simple, fast development and deployment into end solutions without the need of proprietary development platforms or embedded applications.

Event Category

The <event category> parameter defines the actual Input or Output Event number and their valid range for <parm1> and <parm2>.

Input Event Table

The following table defines the values for <event category>, <parm1> and <parm2> parameter for input events defined as a Transition Trigger, Occurrence Trigger, or Input Trigger.

Input Event Table			
Event Category	Parm1	Parm2	Description
0	0 or 1	0 or 1	GPIO1 – General purpose Input/Output #1 0 = Low 1 = High
1	N/A	N/A	Reserved (GPIO2 is input only)
2	N/A	N/A	Reserved (GPIO3 is output only)
3	0 or 1	0 or 1	GPIO4 (for backwards compatibility, this maps to the power source): 0 = operating on battery power

Input Event Table			
Event Category	Parm1	Parm2	Description
			1 = operating on external power
4	N/A	N/A	Reserved (GPIO5 is output only)
5	N/A	N/A	Reserved (GPIO6 is output only - controls registration LED)
6	N/A	N/A	Reserved (GPIO7 is output only - controls GPS LED)
7	0 or 1	0 or 1	Detects the state of Ignition: 0 = Ignition Off 1 = Ignition On
8	1	1	Modem power up indication
9	0 to 5	0 to 5	Modem GSM registration (see AT+CREG command description for GSM registration status information)
10	0 to 8	0 to 8	Modem GPRS registration (see AT%CGREG command description for GPRS registration status information)
11	0 or 1	0 or 1	Receipt of IP address. 0 = No IP address 1 = Valid IP address obtained
12	1	1	Timer 1 (set by AT\$EVTIM1)
13	1	1	Timer 2 (set by AT\$EVTIM2)
14	1	1	Timer 3 (set by AT\$EVTIM3)
15	1	1	Timer 4 (set by AT\$EVTIM4)
16	0 to 1000000	1000000	GPS Distance (unit of measurement is: meters) This input event has been replaced by the AT\$ODOMETER (input category 70) or AT\$TODOM (input Category 91) input events for more accurate data on newer devices and scripts. The event remains valid for legacy applications.
17	0 to 250	250	Current Velocity (unit of measurement is:

Input Event Table			
Event Category	Parm1	Parm2	Description
			Knots)
18	0-1023	0-1023	ADC 1
19	0-1023	0-1023	ADC 2
20	N/A	N/A	Reserved
21	0 or 1	0 or 1	Geo Fence #1. See AT\$GEOFNC command for details on setting a circular geo-fence 0 = Leaving Geofence area 1 = Entering Geofence area
22	0 or 1	0 or 1	Geo Fence #2
23	0 or 1	0 or 1	Geo Fence #3

Output Event Table

The below table defines the values for <event category>, <parm1> and <parm2> parameter for output events defined as Output.

Output Event Table			
Event Category	Parm1	Parm2	Description
0 - 8	N/A	N/A	Reserved
9	0	0	Set GPIO2 to Low (0)
10	0	0	Set GPIO3 to Low (0)
11	N/A	N/A	Reserved
12	0	0	Set GPIO5 to Low (0)
13 - 16	N/A	N/A	Reserved
17	0	0	Set GPIO2 to High (1)
18	0	0	Set GPIO3 to High (1)
19	N/A	N/A	Reserved
20	0	0	Set GPIO5 to High (1)
21 - 24	N/A	N/A	Reserved
25	0	0	Toggle GPIO2
26	0	0	Toggle GPIO3
27	N/A	N/A	Reserved
28	0	0	Toggle GPIO5
29 - 31	N/A	N/A	Reserved
32	See GPIO Flash Table		Reserved
33			Flash GPIO2
34			Flash GPIO3
35			Reserved
36			Flash GPIO5

Output Event Table			
Event Category	Parm1	Parm2	Description
37	See GPIO Flash Table		Reserved
38			Reserved
39			Reserved
40	0 to 214783647	See Bit-Field Table	Generate and transmit one UDP Message to first IP address listed in \$FRIEND command and port number listed in \$UDPAPI command based on Parm1 and Parm2 values
41			Generate and transmit a UDP message with Acknowledge. This message is controlled by \$ACKTM command for number of retries sent. This message has to be acknowledged to avoid sending of retries.
42			Generate and transmit one UDP Message to all IP addresses listed in \$FRIEND command and port number listed in \$UDPAPI command based on Parm1 and Parm2 values
43	1 to 8	0	<p>Resets the timer (Timer #1 - Timer #8) specified by Parm1 to the time (in seconds) specified by Parm2. Parm2, when set to 0, resets the timer to the time last set by \$EVTIMx command or previous output event 43 execution.</p> <p>A value other than 0 would set the timer to expire at the new specified interval (e.g. xx,3,43,1,180 would set timer 1 to expire in 180 seconds). When used with a value other than 0, this is equivalent to invoking \$EVTIMx directly from the event engine and subsequent AT&F commands will save the new value to flash.</p>
44	1 to 25	0	Execute AT command stored at index number of the \$STOATEV command. Parm1 identifies the index number.
45	0 to 2147483647	See Bit-Field Table	Sends data over SMS to All SMS destination addresses configured via \$SMSDA command. (For select \$SMSDA entries, see event categories 54-58)
46	N/A	N/A	Reserved

Output Event Table																		
Event Category	Parm1	Parm2	Description															
47	0	0 to -1	Input Event Counter															
48	0	0 to -1	Input Event Counter reset to value stated by parm2															
49	1 to 25	0 - 1000000	Set geo-fence specified by parm1 to current latitude & longitude with radius specified by parm2															
50	0 to 57	0 to -1	Emulate AT\$EVTEST command via event engine. Parm1 is the input event number while Parm2 is the value to emulate for the input event															
51	N/A	N/A	Reserved															
52	0 to -1	See Bit-Field Table	Generate and transmit one TCP/IP Message to IP address & port number listed by \$FRIEND command based on Parm1 and Parm2 values															
53	0 to 99	0 to 8	<p>Sets periodic RTC alarm in minutes, hours, days, or months.</p> <p>Parm1 indicates the frequency with which to generate the message. Parm2 indicates the time-unit used.</p> <p>Parm2 values: 1 = minutes 2 = hours 4 = days 8 = months</p> <p>For example:</p> <table><tr><td>Parm1</td><td>Parm2</td><td>Result - RTC Alarm occurs every [parm1] [parm2]</td></tr><tr><td>1</td><td>1</td><td>RTC Alarm occurs every 1 minute</td></tr><tr><td>3</td><td>2</td><td>RTC Alarm occurs every 3 hours</td></tr><tr><td>1</td><td>4</td><td>RTC Alarm occurs every 1 day</td></tr><tr><td>6</td><td>8</td><td>RTC Alarm occurs every 6 months</td></tr></table>	Parm1	Parm2	Result - RTC Alarm occurs every [parm1] [parm2]	1	1	RTC Alarm occurs every 1 minute	3	2	RTC Alarm occurs every 3 hours	1	4	RTC Alarm occurs every 1 day	6	8	RTC Alarm occurs every 6 months
Parm1	Parm2	Result - RTC Alarm occurs every [parm1] [parm2]																
1	1	RTC Alarm occurs every 1 minute																
3	2	RTC Alarm occurs every 3 hours																
1	4	RTC Alarm occurs every 1 day																
6	8	RTC Alarm occurs every 6 months																
54	0 to 2147483647	See Bit-Field Table	Sends data over SMS to the first indexed SMS destination address configured via \$SMSDA command.															

Output Event Table			
Event Category	Parm1	Parm2	Description
55	0 to 2147483647	See Bit-Field Table	Sends data over SMS to the second indexed SMS destination address configured via \$SMSDA command.
56	0 to 2147483647	See Bit-Field Table	Sends data over SMS to the third indexed SMS destination address configured via \$SMSDA command.
57	0 to 2147483647	See Bit-Field Table	Sends data over SMS to the fourth indexed SMS destination address configured via \$SMSDA command.
58	0 to 2147483647	See Bit-Field Table	Sends data over SMS to the fifth indexed SMS destination address configured via \$SMSDA command.
59	- 2147483648 to 2147483647	- 2147483648 to 2147483647	Turns off the modem (equivalent to \$OFF command). Parm1 is interpreted as the <off_cfg> parameter to the \$OFF command. Parm2 is interpreted as the <off_mins> parameter to the \$OFF command. At least one valid wake condition bit must be set. Modem will not be turned off if one of the wake condition bits is already true.
60	0 to -1	See Bit-Field Table	Generate and transmit message to main serial port based on Parm1 and Parm2 values in ASCII format only.
61 - 124	N/A	N/A	Reserved
125	0 to 9	- 2147483648 to 2147483647	Sets user variable indicated by parm1 to value of parm2 (for example, if parm1 is 7 and parm2 is 50, this output event would set user variable 7 to 50)
126	0 to 9	- 2147483648 to 2147483647	Increments user variable indicated by parm1 by value of parm2 (for example, if parm1 is 4, parm2 is 100, and user variable 4 was 200 prior to this event, user variable 4 would be incremented to 300 by this event)
127	0 to 9	- 2147483648 to 2147483647	Decrements user variable indicated by parm1 by value of parm2 (for example, if parm1 is 9, parm2 is 10, and user variable 9 was 50 prior to this event, user variable 9 would be decremented to

Output Event Table			
Event Category	Parm1	Parm2	Description
			40 by this event)
128	0 to 9	- 2147483648 to 2147483647	Copies value of a system variable into user variable indicated by parm1. Parm2 is used as an index to determine the system variable that will be copied (see User Variable Index Table)
129 - 138	N/A	N/A	Reserved
139	0 to 1	See Garmin FMI Bit-Field Table	Generate and transmit one Garmin FMI TCP/IP Message to IP address & port number listed by \$FRIEND command based on Parm1 and Parm2 values
140	0 to 1	See Garmin FMI Bit-Field Table	Generate and transmit one Garmin FMI UDP Message to first IP address listed in \$FRIEND command and port number listed in \$UDPAPI command based on Parm1 and Parm2 values.
141	0 to 1	See Garmin FMI Bit-Field Table	Generate and transmit a Garmin FMI UDP message with Acknowledge. This message is controlled by \$ACKTM command for number of retries sent. This message has to be acknowledged to avoid sending of retries..
142	0 to 1	See Garmin FMI Bit-Field Table	Generate and transmit one Garmin FMI UDP Message to all IP address listed in \$FRIEND command and port number listed in \$UDPAPI command based on Parm1 and Parm2 values.
143 to 151	N/A	N/A	Reserved
152	0	0	Send UDP message to the check-in servers specified in the \$FRIEND list. This event sends a wakeup style message to every server in the friends list with usage=4.
153	1 to 3	0 to 1	Sets User Flag (denoted by Param1) to a status value (denoted by Param2). Same as using AT\$USRFLG(x)=<status>. See \$USRFLG for more details.
154	- 2147483648 to 2147483647	- 2147483648 to 2147483647	Triggers accelerometer and GPS event data logging.

User Variable Index Table

This table is used only with Output Event 128

Parm2	System Variable Copied to User Variable
	(For example, AT\$EVENT=99,3,128,3,9 would copy value of Input Event 9 (GSM registration status) into User Variable 3).
	NOTE: All the following system variables are not supported by all devices. Ensure your device supports the system variable before attempting to use it with user variables.
	For Serving Cell and Neighbor Cell values, see GSM0000GN012 - Engineering Mode Manual for details of the %EM command.
-868	LPF2 (MMA) Sample Count
-867	Calculated Calibration Quality Factor
-866 to -474	Reserved
-473	Copies Neighbor Cell 5 signal strength. Equivalent to AT%EM=2,3
-472	Copies Neighbor Cell 5 absolute radio frequency channel number (ARFCN). Equivalent to AT%EM=2,3
-471	Copies Neighbor Cell 5 cell ID. Equivalent to AT%EM=2,3
-470	Copies Neighbor Cell 5 location area code. Equivalent to AT%EM=2,3
-469 to -464	Reserved
-463	Copies Neighbor Cell 4 signal strength. Equivalent to AT%EM=2,3
-462	Copies Neighbor Cell 4 absolute radio frequency channel number (ARFCN). Equivalent to AT%EM=2,3
-461	Copies Neighbor Cell 4 cell ID. Equivalent to AT%EM=2,3
-460	Copies Neighbor Cell 4 location area code. Equivalent to AT%EM=2,3
-459 to -454	Reserved
-453	Copies Neighbor Cell 3 signal strength. Equivalent to AT%EM=2,3
-452	Copies Neighbor Cell 3 absolute radio frequency channel number (ARFCN). Equivalent to AT%EM=2,3
-451	Copies Neighbor Cell 3 cell ID. Equivalent to AT%EM=2,3
-450	Copies Neighbor Cell 3 location area code. Equivalent to AT%EM=2,3
-449 to	Reserved

-444	
-443	Copies Neighbor Cell 2 signal strength. Equivalent to AT%EM=2,3
-442	Copies Neighbor Cell 2 absolute radio frequency channel number (ARFCN). Equivalent to AT%EM=2,3
-441	Copies Neighbor Cell 2 cell ID. Equivalent to AT%EM=2,3
-440	Copies Neighbor Cell 2 location area code. Equivalent to AT%EM=2,3
-439 to -434	Reserved
-433	Copies Neighbor Cell 1 signal strength. Equivalent to AT%EM=2,3
-432	Copies Neighbor Cell 1 absolute radio frequency channel number (ARFCN). Equivalent to AT%EM=2,3
-431	Copies Neighbor Cell 1 cell ID. Equivalent to AT%EM=2,3
-430	Copies Neighbor Cell 1 location area code. Equivalent to AT%EM=2,3
-429 to -424	Reserved
-423	Copies Neighbor Cell 0 signal strength. Equivalent to AT%EM=2,3
-422	Copies Neighbor Cell 0 absolute radio frequency channel number (ARFCN). Equivalent to AT%EM=2,3
-421	Copies Neighbor Cell 0 cell ID. Equivalent to AT%EM=2,3
-420	Copies Neighbor Cell 0 location area code. Equivalent to AT%EM=2,3
-419 to -407	Reserved
-406	Copies Serving Cell timing advance. Equivalent to AT%EM=2,1
-405	Copies Serving Cell signal strength. Equivalent to AT%EM=2,1
-404	Copies Serving Cell absolute radio frequency channel number (ARFCN). Equivalent to AT%EM=2,1
-403	Copies Serving Cell cell ID. Equivalent to AT%EM=2,1
-402	Copies Serving Cell location area code. Equivalent to AT%EM=2,1
-401	Copies Serving Cell MNC (0x00MMNNCC, where MM, NN, and CC are the hex values of the ASCII representations of the MNC). Equivalent to AT%EM=2,4
-400	Copies Serving Cell MCC (0x00MMCCcc, where MM, CC, and cc are the hex values of the ASCII representations of the MCC) . Equivalent to AT%EM=2,4
-399 to	Reserved

-303	
-302	Copies Software version (for example, if version is 1.1.1.8, value would be 0x00001118)
-301	Copies product ID
-300	Copies \$usrval value
-299 to -22	Reserved
-21	Copies current RTC time: 0x00HHMMSS where HH = hour (0-23), MM = minute (0-59), SS = second (0-59)
-20	Copies current RTC date: 0x00YYMMDD where YY = last two digits of year (00-99), MM = month (1-12), DD = day of month (1-31)
-19 to -9	Reserved
-8	Copies current count of event timer 8 in seconds (equivalent to \$EVTIMQRY=8)
-7	Copies current count of event timer 7 in seconds (equivalent to \$EVTIMQRY=7)
-6	Copies current count of event timer 6 in seconds (equivalent to \$EVTIMQRY=6)
-5	Copies current count of event timer 5 in seconds (equivalent to \$EVTIMQRY=5)
-4	Copies current count of event timer 4 in seconds (equivalent to \$EVTIMQRY=4)
-3	Copies current count of event timer 3 in seconds (equivalent to \$EVTIMQRY=3)
-2	Copies current count of event timer 2 in seconds (equivalent to \$EVTIMQRY=2)
-1	Copies current count of event timer 1 in seconds (equivalent to \$EVTIMQRY=1)
	Copies value of Input Event 0 (GPIO1).
0	0 = Low 1 = High
	Copies value of Input Event 1 (GPIO2).
1	0 = Low 1 = High
	Copies value of Input Event 2 (GPIO3).
2	0 = Low

	1 = High
	Copies value of Input Event 3 (GPIO4).
3	0 = Low
	1 = High
	Copies value of Input Event 4 (GPIO5).
4	0 = Low
	1 = High
	Copies value of Input Event 5 (GPIO6).
5	0 = Low
	1 = High
	Copies value of Input Event 6 (GPIO7).
6	0 = Low
	1 = High
	Copies value of Input Event 7 (GPIO8).
7	0 = Low
	1 = High
8	Copies value of Input Event 8 (modem power up indication).
	Always 1.
	Copies value of Input Event 9 (modem GSM registration).
9	See AT+CREG command description for GSM registration status information.
	Copies value of Input Event 10 (modem GPRS registration).
10	See AT%CGREG command for GPRS registration status information.
	Copies value of Input Event 11 (Receipt of IP address).
11	0 = No IP address
	1 = Valid IP address obtained
	Copies value of Input Event 12 (Timer 1 status).
12	0 = Timer not expired
	1 = Timer expired
	Copies value of Input Event 13 (Timer 2 status).
13	0 = Timer not expired
	1 = Timer expired

	Copies value of Input Event 14 (Timer 3 status).
14	0 = Timer not expired 1 = Timer expired
	Copies value of Input Event 15 (Timer 4 status).
15	0 = Timer not expired 1 = Timer expired
16	Copies value of Input Event 16 (GPS distance in meters)
17	Copies value of Input Event 17 (Maximum velocity in knots)
18	Copies value of Input Event 18 (ADC1 status)
19 to 20	Reserved
	Copies value of Input Event 21 (Geofence #1)
21	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 22 (Geofence #2)
22	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 23 (Geofence #3)
23	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 24 (Geofence #4)
24	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 25 (Geofence #5)
25	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 26 (MT Power Save Event)
26	0 = Exit Power Save Mode 1 = Enter Power Save Mode
	Copies value of Input Event 27 (GPS status)
27	0 = Invalid GPS data 1 = Valid GPS data

28	Copies value of Input Event 28 (RTC Alarm Input)
29	Copies value of Input Event 29 (Invalid GPS data for a period of seconds)
30	Copies value of Input Event 30 (Unit staying Idle in one place for a period of seconds)
	Copies value of Input Event 31 (Geofence #6)
31	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 32 (Geofence #7)
32	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 33 (Geofence #8)
33	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 34 (Geofence #9)
34	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 35 (Geofence #10)
35	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 36 (Geofence #11)
36	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 37 (Geofence #12)
37	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 38 (Geofence #13)
38	0 = Leaving geofence area 1 = Entering geofence area
	Copies value of Input Event 39 (Geofence #14)
39	0 = Leaving geofence area 1 = Entering geofence area
40	Copies value of Input Event 40 (Geofence #15)

0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 41 (Geofence #16)
 41 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 42 (Geofence #17)
 42 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 43 (Geofence #18)
 43 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 44 (Geofence #19)
 44 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 45 (Geofence #20)
 45 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 46 (Geofence #21)
 46 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 47 (Geofence #22)
 47 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 48 (Geofence #23)
 48 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 49 (Geofence #24)
 49 0 = Leaving geofence area
 1 = Entering geofence area
 Copies value of Input Event 50 (Geofence #25)
 50 0 = Leaving geofence area
 1 = Entering geofence area

51	Copies value of Input Event 51 (Input Event Counter)
	Copies value of Input Event 52 (New SMS indication)
52	0 = SMS message read from SIM 1 = New SMS message received
53	Copies value of Input Event 53 (Current Input Event Counter count that can be used as an AND condition with other input events)
	Copies value of Input Event 54 (Does any geofence exist?)
54	0 = geofence does not exist 1 = at least one geofence was created
55 to 64	Reserved
65	Copies value of Input Event 64 (Receipt of incoming call with Call Identifier matching one of the numbers configured via the \$EVCID command)
	Copies value of Input Event 66 (Timer 5 status).
66	0 = Timer not expired 1 = Timer expired
	Copies value of Input Event 67 (Timer 6 status).
67	0 = Timer not expired 1 = Timer expired
	Copies value of Input Event 68 (Timer 7 status).
68	0 = Timer not expired 1 = Timer expired
	Copies value of Input Event 69 (Timer 8 status).
69	0 = Timer not expired 1 = Timer expired
70	Copies value of Input Event 70 (Odometer in meters)
	Copies value of Input Event 71 (GPS Antenna status)
	0 = unknown
71	1 = good 2 = open 3 = short
	Copies value of Input Event 72 (GPS overspeed)
72	0 = interval has ended 1 = interval has begin

73 to 85	Reserved
86	Copies value of Input Event 86 (GFMI enabled)
87	Copies value of Input Event 87 (GFMI text message reply)
88	Copies value of Input Event 88 (GFMI open text message)
89	Copies value of Input Event 89 (GFMI stop status)
90	Copies value of Input Event 90 (GFMI ETA status)
91	Copies value of Input Event 91 (Trip odometer in meters)
92 to 99	Reserved
100	Copies value of Input Event 100 (User variable 0)
101	Copies value of Input Event 101 (User variable 1)
102	Copies value of Input Event 102 (User variable 2)
103	Copies value of Input Event 103 (User variable 3)
104	Copies value of Input Event 104 (User variable 4)
105	Copies value of Input Event 105 (User variable 5)
106	Copies value of Input Event 106 (User variable 6)
107	Copies value of Input Event 107 (User variable 7)
108	Copies value of Input Event 108 (User variable 8)
109	Copies value of Input Event 109 (User variable 9)

GPIO Flash Table

Parm1	Parm2
Bits 16 – 31 determine the low signal state while bits 0 – 15 determine the high signal state. A value of 0 for bits 16 – 31 indicates the GPIO will remain in low signal state for the same amount of time as the high signal state (50% duty cycle). The high or low states are measured in multiples of ¼ seconds. The toggle count is set by Parm2	The flashing GPIO event will cause the GPIO output state to toggle at time 0 to the opposite state prior to starting the GPIO output flash event processing. This counts as toggle #1. An even number of toggle count will force a final state which is the same as the initial state. An odd number of toggle count will force the final state to be opposite of the initial GPIO output condition. 0 = toggle forever.

Bit-Field Tables

Bit-Field Table Selection

The data table used for the output message is determined by:

1. The output event category used to send the message, and
2. The 2 most significant bits of the parameter 2 value.

Use the table below to determine which of the four bit-field tables (0-3) to use for the Parm2 value.

Bit-Field Table Selection		
Bit 31	Bit 30	Description
0	0	Table selector 0. Format message based on Parm2 values using Message Format Table 0 (legacy format)
0	1	Table selector 1. Format message based on Parm2 values using Message Format Table 1.
1	0	Table selector 2. Format message based on Parm2 values using Message Format Table 2.
1	1	Table selector 3. Format message based on Parm2 values using Message format Table 3.

Bit-Field Table 0 – Legacy (0,0)

Output Events 40, 41, 42 and 52.

The Parm2 value is obtained as a result of selecting individual bit-fields from the table below.

Bit-Field Table 0 – Legacy (0,0)	
Parm2	Description
Bit 0:	1 = send all data generated as a result of this table in Binary format 0 = send all data generated as a result of this table in ASCII format
Bit 1:	1 = add parm 1 data to UDP message (4 – bytes in Binary format, 11 – bytes of data in ASCII format) 0 = do not add parm1 data to outbound UDP message
Bit 2:	1 = add \$MDMID value (22 – bytes of ASCII data – irrespective of Bit- 0 setting) 0 = do not add \$MDMID value
Bit 3:	<div>1 = Add modem status information: Binary (2 bytes):</div> <div><div><div>Byte 2</div><div>8910111213141501234567</div><div>GP9GP10RESRESRESRESRESRESGP1GP2GP3PWRGP5REGGPSIGN</div></div><div><div>Byte 1</div><div></div><div></div></div></div> <div>IGN : 1 = ignition on, 0 = ignition off.</div> <div>GPS LED : 1 = LED on, 0 = LED off.</div> <div>REG LED: 1 = LED on, 0 = LED off.</div> <div>GP5 : GPO5 (GPIO5) latched output status (1 = high, 0 = low).</div> <div>PWR : 1 = external power present, 0 = operating on internal battery power.</div> <div>GP3 : GPO3 (GPIO3) latched output status (1 = high, 0 = low).</div> <div>GP2 : GPO2 (GPIO2) latched output status (1 = high, 0 = low).</div> <div>GP1 : GPI1 (GPIO1) input status (1 = high, 0 = low).</div> <div>GP9 : GPI2 (GPIO9) input status (1 = high, 0 = low).</div> <div>GP10 : GPI3 (GPIO10) input status (1 = high, 0 = low).</div> <div>RES : Reserved for future use.</div> <div>ASCII (5 bytes): Same bytes described above converted to ASCII HEX, with the bytes separated by a comma.</div> <div>0 = do not add modem status information</div>
Bit 4:	1 = add ADC1 value (2 bytes binary or 5 bytes ASCII) 0 = do not add ADC1 value
Bit 5:	1 = add ADC2 value (2 bytes binary or 5 bytes ASCII) 0 = do not add ADC2 valu

Bit-Field Table 0 – Legacy (0,0)	
Parm2	Description
Bit 6:	1 = Message is stored in non-volatile memory until it can be sent, regardless of network status. 0 = Code checks network status before storing message in non-volatile memory. If it appears that the message can be sent out immediately (network status is clear and message queue has few or no messages pending), the message is stored in the non-volatile message queue until it can be sent. Otherwise, the message is deleted.
Bit 7:	1 = add input <event category> number (1 - byte in binary format, 3 - bytes in ASCII format) 0 = do not add input <event category> number
Bit 8:	1 = add GPS data (3 - bytes of Date information in Binary format or up to 80 - bytes of \$GPGGA NMEA message if Bit-0 is set to 0) 0 = do not add this particular field of GPS data
Bit 9:	1 = add 1-byte of STATUS information in Binary 0 = do not add this particular field of GPS data
Bit 10:	1 = add GPS data (3 - bytes of Latitude information in Binary format or up to 80 - bytes of \$GPGSA NMEA message if Bit-0 is set to 0) 0 = do not add this particular field of GPS data
Bit 11:	1 = add GPS data (4 - bytes of Longitude information in Binary format or up to two 80 - bytes of \$GPGSV NMEA message if Bit-0 is set to 0) 0 = do not add this particular field of GPS data
Bit 12:	1 = add GPS data (2 - bytes of Velocity information in Binary format or up to 80 - bytes of \$GPRMC NMEA message if Bit-0 is set to 0) 0 = do not add this particular field of GPS data
Bit 13:	1 = add 2-bytes of HEADING information in Binary 0 = do not add this particular field of GPS data
Bit 14:	1 = add GPS data (3 - bytes of Time information in Binary format or 0 bytes if Bit-0 is set to 0) 0 = do not add this particular field of GPS data
Bit 15:	1 = add GPS data (3 - bytes of Altitude information in Binary format or 0 bytes if Bit-0 is set to 0) 0 = do not add this particular field of GPS data
Bit 16:	1 = add GPS data (1 - byte of Number Of Satellites In View information in Binary format or 0 bytes if Bit-0 is set to 0) 0 = do not add this particular field of GPS data

Bit-Field Table 0 – Legacy (0,0)	
Parm2	Description
Bit 17:	Reserved
Bit 18:	1 = send this OTA message via SMS when GPRS services is not available 0 = send this OTA message via GPRS only
Bit 19:	1 = send Last Valid GPS data if current data is invalid 0 = send current GPS data – valid or invalid
Bit 20:	1 = add Odometer reading (4 – bytes of Odometer information in Binary format or 11 – bytes if Bit-0 is set to 0) 0 = do not add this particular field of GPS data
Bit 21:	1 = add RTC time (6 – bytes of RTC time in Binary format or 13 – bytes if Bit-0 is set to 0) 0 = do not add RTC time with GPS data
Bit 22:	1 = Replace/append modem ID field with 10-byte modem ID (including one leading and one ending space character) if bit-0 is set to 0. Replace/append it with 8-bytes long modem ID value if bit-0 is set to 1 (no leading or ending space characters in binary mode.) (NOTE: bit-22 setting overrides bit-2 setting) 0 = Sent the modem ID as defined by Bit-2
Bit 23:	Reserved
Bit 24:	1 = add GPS overspeed data (6 – bytes of Odometer information in Binary format or 6 to 18 – bytes if Bit-0 is set to 0). Binary format: xxyyzz: xx is speed specified by AT\$GPSOSI (unit: knots); yy is the maximum speed incurred during the interval (unit: knots, 1/10 knot accuracy); zz is the interval duration (unit: seconds); ASCII format: “ x y z”: space delineated, length of each field varies with its value 0 = do not add this particular field of GPS data
Bit 25:	1 = Add cell information as follows (see GSM0000TN012 - Engineering Mode Manual for details of the %EM command): If Binary format (Bit0=1) is selected, please refer to the “Bit 25 Binary Format” table If ASCII format (Bit0=0) is selected please refer to the “Bit 25 ASCII Format”

Bit-Field Table 0 - Legacy (0,0)	
Parm2	Description
	table 0 = Do not add cell information
Bits 26 - 29:	Reserved
Bits 30 - 31:	00 = This mask identifier signifies output event mask 0

Bit-Field Table 0 - Parm3	
Parm3	Description
Bit 0:	Reserved
Bit 1:	UART Application data such as RFID
Bit 2:	One wire device 1 data such as temperature
Bit 3:	One wire device 2 data
Bit 4:	0 = Do not add acceleration event start data. 1 = Add acceleration event start data in binary format. The acceleration event start data format (17 bytes): 3 bytes - GPS date in binary format 3 bytes - GPS latitude in binary format 4 bytes - GPS longitude in binary format 2 bytes - GPS velocity in binary format 2 bytes - GPS heading in binary format 3 bytes - GPS time in binary format
Bit 5:	0 = Do not add acceleration event end data. 1 = Add acceleration event end data in binary format. The acceleration event end data format (21 bytes): 3 bytes - GPS date in binary format 3 bytes - GPS latitude in binary format 4 bytes - GPS longitude in binary format 2 bytes - GPS velocity in binary format 2 bytes - GPS heading in binary format 3 bytes - GPS time in binary format 2 bytes - Max acceleration (milli-Gs) in binary format 2 bytes - Event duration (tenths of a second) in binary format

Bit 25 Binary Format Table

Position	Width (bytes)	Field	Comment
0-2	3	EM_MCC	Mobile Country Code
3-5	3	PCELL: EM_MNC	Mobile Network Code
6-7	2	PCELL: EM_LAC	Location Area Code
8-9	2	PCELL: EM_CID	Cell Identifier
10-11	2	PCELL: EM_ARFCN	Current Channel Number
12	1	PCELL: EM_RXLEV	Received Field Strength
13	1	PCELL: EM_TAV	Timing Advance
14-15	2	PCELL: EM_NCO_LAC	Location Area Code (Neighbor Cell 0)
16-17	2	PCELL: EM_NCO_CID	Cell Identifier (Neighbor Cell 0)
18-19	2	PCELL: EM_NCO_ARFCN	Current Channel Number (Neighbor Cell 0)
20	1	PCELL: EM_NCO_RXLEV	Received Field Strength (Neighbor Cell 0)
21-22	2	PCELL: EM_NC1_LAC	Location Area Code (Neighbor Cell 1)
23-24	2	PCELL: EM_NC1_CID	Cell Identifier (Neighbor Cell 1)
25-26	2	PCELL: EM_NC1_ARFCN	Current Channel Number (Neighbor Cell 1)
27	1	PCELL: EM_NC1_RXLEV	Received Field Strength (Neighbor Cell 1)
28-29	2	PCELL: EM_NC2_LAC	Location Area Code (Neighbor Cell 2)
30-31	2	PCELL: EM_NC2_CID	Cell Identifier (Neighbor Cell 2)
32-33	2	PCELL: EM_NC2_ARFCN	Current Channel Number (Neighbor Cell 2)
34	1	PCELL: EM_NC2_RXLEV	Received Field Strength (Neighbor Cell 2)
35-36	2	PCELL: EM_NC3_LAC	Location Area Code (Neighbor Cell 3)
37-38	2	PCELL: EM_NC3_CID	Cell Identifier (Neighbor Cell 3)
39-40	2	PCELL: EM_NC3_ARFCN	Current Channel Number (Neighbor Cell 3)
41	1	PCELL: EM_NC3_RXLEV	Received Field Strength (Neighbor Cell 3)
42-43	2	PCELL: EM_NC4_LAC	Location Area Code (Neighbor Cell 4)
44-45	2	PCELL: EM_NC4_CID	Cell Identifier (Neighbor Cell 4)
46-47	2	PCELL: EM_NC4_ARFCN	Current Channel Number (Neighbor Cell 4)
48	1	PCELL: EM_NC4_RXLEV	Received Field Strength (Neighbor Cell 4)
49-50	2	PCELL: EM_NC5_LAC	Location Area Code(Neighbor Cell 5)

Position	Width (bytes)	Field	Comment
51-52	2	PCELL: EM_ NC5_ CID	Cell Identifier (Neighbor Cell 5)
53-54	2	PCELL: EM_ NC5_ ARFCN	Current Channel Number (Neighbor Cell 5)
55	1	PCELL: EM_ NC5_ RXLEV	Received Field Strength (Neighbor Cell 5)

Bit 25 ASCII Format Table

A separate message is sent for the serving cell and for each neighbor cell with PCell data for each cell in a comma separated list:

Cell	Prefix	Field 1	Field 2	Field 3	Field 4	Field 5	Field 6	Field 7
Serving Cell	\$PLPSC	MCC	MNC	LAC	CID	ARFCN	RXLEV	TAV
Neighbour Cell 0	\$PNC0	LAC	CID	ARFCN	RXLEV			
Neighbour Cell 1	\$PNC1	LAC	CID	ARFCN	RXLEV			
Neighbour Cell n	\$PNCn	LAC	CID	ARFCN	RXLEV			

Title	Description	Format
EM_MCC	Mobile Country Code	\$PLPSC,a,b,c,d,e,f,g
PCELL: EM_MNC	Mobile Network Code	\$PLPSC,a,b,c,d,e,f,g

Example:

```
$PLPSC,234,015,130,2648,79,29,0
$PNC0,130,2640,81,25
$PNC1,0,0,0,0
$PNC2,0,0,0,0
$PNC3,0,0,0,0
$PNC4,0,0,0,0
$PNC5,0,0,0,0
```

Bit-Field Table 1 – (0,1)

Output Events 40, 41, 42 and 52.

The Parm2 value is obtained as a result of selecting individual bit-fields from the table below.

NOTE: Data generated by the GFMI is presented in little endian format. See the description for bit 4 for an example of this.

Bit Field Table 1 – (0,1)	
Parm2	Description
Bit 0	1 = send all data generated as a result of this table in Binary format 0 = send all data generated as a result of this table in ASCII format
Bit 1	1 = Add parm1 data to message (4 bytes in binary format, 11 bytes of data in ASCII format) 0 = do not add parm1 data to outbound message
Bit 2	1 = add \$MDMID value (22 bytes of ASCII data irrespective of Bit 0 setting)

Bit Field Table 1 – (0,1)	
Parm2	Description
	0 = do not add \$MDMID value
Bit 3	<p>1 = add Garmin connection status (1 – byte in Binary format, 2 – bytes in ASCII format)</p> <p>0 = do not add Garmin connection status</p>
Bit 4	<p>1 = add Garmin product information (8 – bytes in Binary format, 21 – bytes in ASCII format)</p> <p>Binary format is: ppsnnnnn where pp is the Product ID, ss is the Garmin’s Software version times 100, and nnnn is the Garmin’s serial number.</p> <p>Note: GFMI data is presented in little endian format, each set of bytes should be reversed e.g A2 04 5E 01 EA 99 5D E4 breaks down as:</p> <p style="padding-left: 40px;">04 A2 – Product ID 1186</p> <p style="padding-left: 40px;">01 5E – software version x 100 350</p> <p style="padding-left: 40px;">E4 5D 99 EA – serial number 3831339498</p> <p>ASCII format is: “pppp sss nnnnnnnn”.</p> <p>0 = do not add Garmin product info</p>
Bit 5	<p>1 = add Garmin FMI v2 (A604) Canned Response Text Message Acknowledgement information, or Garmin FMI v1 (A602) Yes/No Text Message Acknowledgement information (for FMI v1 devices) (27 - bytes in Binary format, 38 - bytes in ASCII format)</p> <p>Binary format is: ddddttttiiiiiiiiiiivvvv where d’s and t’s are the date and time that the Garmin sent the reply, i’s are the ID of the message being reply to (specified in at\$gfmi=[45]), v’s are the value of the reply (0:ok, 1:yes, 2:no). ASCII format is “dd/dd/dd tt:tt:tt iiiiiiiiiiiii vvv”.</p> <p>0 = do not add Garmin text message ack info</p>
Bit 6	<p>1 = Message is stored in non-volatile memory until it can be sent, regardless of network status</p> <p>0 = Code checks network status before storing message in non-volatile memory. If it appears that the message can be sent out immediately (network status is clear and message queue has few or no messages pending), the message is stored in the non-volatile message queue until it can be sent. Otherwise, the message is deleted</p>

Bit Field Table 1 – (0,1)	
Parm2	Description
Bit 7	<p>1 = add input <event category> number (1 – byte in binary format, 3 – bytes in ASCII format)</p> <p>0 = do not add input <event category> number</p>
Bit 8	<p>1 = add Garmin open text message info (92 – bytes in Binary format, 108 – bytes in ASCII format)</p> <p>Binary format ddddttttiiii where d represents the data, t represents the time and i indicates the message ID.</p> <p>ASCII mm/dd/yy hh:mm:ss Message ID First 80 chars of message</p> <p>NOTE: With this Bit set to 1, the contents of the Open Text Message generated by the Garmin Device will be passed as a fixed 81 bytes (80 bytes of data and 1 byte for trailing <space>) directly following the Open Text Message Information for Bit 8.</p> <p>0 = do not add Garmin open text message info</p>
Bit 9	<p>1 = add Garmin stop status (8 – bytes in Binary format, 21 – bytes in ASCII format)</p> <p>Binary format iiiissnn</p> <p>ASCII ii nnnnnnnn ssssssss</p> <p>where i is the stop ID, s is the stop status and n is the stop index</p> <p>Stop Status: 100=Active, 101=Done, 102=Unread Inactive, 103=Read Inactive, 104=Deleted</p> <p>0 = do not add Garmin stop status</p>
Bit 10	<p>1 = add Garmin ETA status (24 – bytes in Binary format, 57 – bytes in ASCII format)</p> <p>Binary format ddddttttrrrreeeeaaaaoooo where w's and x's are the date and time that the Garmin sent the ETA, r's are reserved, e's are the distance in meters to the current stop, a's and o's are the latitude and longitude in degrees times 1,000,000 of the current stop.</p> <p>ASCII format is "dd/dd/dd tt:tt:tt rrrrrrrr eeeeeeee aaaaaaaaaa oooooooooo" where the stop ID and distance are in hex.</p> <p>0 = do not add Garmin ETA status</p>
Bit 11	<p>1 = add Garmin date (4 – bytes in Binary format, 9 – bytes in ASCII format)</p>

Bit Field Table 1 – (0,1)	
Parm2	Description
	<p>Binary format is dddd. ASCII format is “dd/dd/dd”.</p> <p>0 = do not add Garmin date</p>
Bit 12	<p>1 = add Garmin time (4 – bytes in Binary format, 9 – bytes in ASCII format)</p> <p>Binary format is tttt. ASCII format is “tt/tt/tt”.</p> <p>0 = do not add Garmin time</p>
Bit 13	<p>1 = add Garmin latitude (4 – bytes in Binary format, 10 – bytes in ASCII format)</p> <p>Binary format is aaaa. ASCII format is “aaaaaaaaaa”. In both formats the latitude has been multiplied by 1,000,000.</p> <p>0 = do not add Garmin latitude</p>
Bit 14	<p>1 = add Garmin longitude (4 – bytes in Binary format, 11 – bytes in ASCII format)</p> <p>Binary format is oooo. ASCII format is “oooooooooo”. In both formats the longitude has been multiplied by 1,000,000.</p> <p>0 = do not add Garmin longitude</p>
Bit 15	<p>1 = add Garmin altitude (4 – bytes in Binary format, 7 – bytes in ASCII format)</p> <p>Binary format is aaaa. ASCII format is “aaaaaa”. The units reported is in meters.</p> <p>0 = do not add Garmin altitude</p>
Bit 16	<p>1 = add Garmin speed (4 – bytes in Binary format, 6 – bytes in ASCII format)</p> <p>Binary format is vvvv. ASCII format is “vvvvv”. The units reported is nautical miles per hour.</p> <p>0 = do not add Garmin speed</p>
Bit 17	<p>1 = add Garmin PVT fix type (2 – bytes in Binary format, 2 – bytes in ASCII format)</p> <p>0/1 – no fix, 2 – two dimensional, 3 – three dimensional, 4 – two dimensional differential, 5 – three dimensional differential.</p>

Bit Field Table 1 – (0,1)	
Parm2	Description
	0 = do not add Garmin PVT fix type
Bit 18	<p>1 = add Garmin A604 open text message ack info (24 – bytes in Binary format, 36 – bytes in ASCII format)</p> <p> ddddttttiiiiiiiiiiir where dddd is date, tttt time, I is the message ID and r is the result code.</p> <p> Mm/dd/yy hh:mm:ss ID result code</p> <p>0 = do not add Garmin A604 open text message ack info</p>
Bit 19	<p>1 = add Garmin canned response refresh list (25 – bytes in Binary format, 51 – bytes in ASCII format)</p> <p> Bitmask of Canned Response Messages to Resend</p> <p>0 = do not add Garmin canned response refresh list</p>
Bit 20	<p>1 = add Odometer reading (4 – bytes of Odometer information in Binary format or 11 – bytes if Bit-0 is set to 0)</p> <p>0 = do not add this particular field of GPS data</p>
Bit 21	<p>1 = add RTC time (6 – bytes of RTC time in Binary format or 13 – bytes if Bit-0 is set to 0)</p> <p>0 = do not add RTC time with GPS data</p>
Bit 22	<p>1 = Replace/append modem ID field with 10-byte modem ID (including one leading and one ending space character) if bit-0 is set to 0. Replace/append it with 8-bytes long modem ID value if bit-0 is set to 1 (no leading or ending space characters in binary mode.)</p> <p>(NOTE: bit-22 setting overrides bit-2 setting)</p> <p>0 = Sent the modem ID as defined by Bit-2</p>
Bit 23	<p>1 = add Garmin update canned message list flag (1 – bytes in Binary format, 2 – bytes in ASCII format)</p> <p>0 = do not add Garmin update canned message list flag</p>
Bit 24	<p>1 = add Garmin message status(16 – bytes in Binary format, 18 – bytes in ASCII format)</p> <p> liiiiiiiiiis where i is the message ID and s is the status</p> <p>0 = do not add Garmin message status</p>

Bit Field Table 1 – (0,1)	
Parm2	Description
Bit 25	1 = add Garmin driver id (49 – bytes in Binary format, 50 – bytes in ASCII format) 0 = do not add Garmin driver id
Bit 26	1 = add Garmin update driver status list flag(1 – bytes in Binary format, 2 – bytes in ASCII format) 0 = do not add Garmin update driver status list flag
Bit 27	1 = add Garmin driver status(4 – bytes in Binary format, 3 – bytes in ASCII format) 0 = do not add Garmin driver status
Bit 28	1 = add Garmin PING(4 – bytes in Binary format, 5 – bytes in ASCII format) 0 = do not add Garmin ping
Bit 29	1 = add Garmin throttle list status info(2+(count*4) – bytes in Binary format where count is in the first 2 bytes, 3+(count*7) – bytes in ASCII format where count is in the first 2 bytes) Array List of Throttle IDs and Associated Statuses (1= Enabled, 0=disabled) 0 = do not add Garmin Throttle List Status
Bit 30	1 = This mask identifier signifies output event mask 1

Bit-Field Table 2 – (1,0)

Output Events 40, 41, 42 and 52.

The Parm2 value is obtained as a result of selecting individual bit-fields from the table below.

Bit-Field Table 2 - (1,0)	
Parm2	Description
Bit 0	1 = send all data generated as a result of this table in Binary format 0 = send all data generated as a result of this table in ASCII format
Bit 1	1 = Add parm1 data to message (4 bytes in binary format, 11 bytes of data in ASCII format) 0 = do not add parm1 data to outbound message
Bit 2	1 = add \$MDMID value (22 bytes of ASCII data irrespective of Bit 0 setting) 0 = do not add \$MDMID value
Bits 3-5	<p>Bit 3 is least significant in the following description:</p> <p>000 = Do not add user variables to message.</p> <p>001 = Add user variables 0-9 to message, starting with user variable 0 (4 bytes per user variable in binary format, 8 hex bytes per user variable in ASCII format). Spaces are inserted between the different user variables.</p> <p>010 = Add only user variable 0 to message (4 bytes per user variable in binary format, 8 hex bytes per user variable in ASCII format).</p> <p>011 = Add only user variables 0-1 to message(4 bytes per user variable in binary format, 8 hex bytes per user variable in ASCII format). Spaces are inserted between the different user variables.</p> <p>100 = Add only user variables 0-2 to message (4 bytes per user variable in binary format, 8 hex bytes per user variable in ASCII format). Spaces are inserted between the different user variables.</p> <p>101 = Add only user variables 0-3 to message (4 bytes per user variable in binary format, 8 hex bytes per user variable in ASCII format). Spaces are inserted between the different user variables.</p> <p>110 = Add only user variables 0-5 to message (4 bytes per user variable in binary format, 8 hex bytes per user variable in ASCII format). Spaces are inserted between the different user variables.</p> <p>111 = Add only user variables 0-7 to message (4 bytes per user variable in binary format, 8 hex bytes per user variable in ASCII format). Spaces are inserted between the different user variables.</p>
Bit 6:	<p>1 =Message is stored in non-volatile memory until it can be sent, regardless of network status.</p> <p>0 = Check network status before storing message in non-volatile memory. If it appears that the message can be sent out immediately (network status is clear and message queue has few or no messages pending), the message is stored in the non-volatile message queue until it can be sent. Otherwise, the</p>

Bit-Field Table 2 - (1,0)	
Parm2	Description
	message is deleted.
Bit 7	1 = add input <event category> number (1 byte in binary format, 3 bytes in ASCII format) 0 = do not add input <event category> number
Bit 8	Accelerometer XYZ running average values (2 bytes per axis in binary, 5 digits per axis in ASCII)
Bit 9	Accelerometer XYZ Filter #X1 values (2 bytes per axis in binary, 5 digits per axis in ASCII)
Bit 10	Accelerometer XYZ Filter #X2 values (2 bytes per axis in binary, 5 digits per axis in ASCII)
Bit 11	Accelerometer XYZ Filter #Y1 values (2 bytes per axis in binary, 5 digits per axis in ASCII)
Bit 12	Accelerometer XYZ Filter #Y2 values (2 bytes per axis in binary, 5 digits per axis in ASCII)
Bit 13	Accelerometer XYZ Filter #Z1 values (2 bytes per axis in binary, 5 digits per axis in ASCII)
Bit 14	Accelerometer XYZ Filter #Z2 values (2 bytes per axis in binary, 5 digits per axis in ASCII)
Bits 15-17	<p>Bit 15 is the least significant in the following description:</p> <p>000 = Do not add GPS data to message.</p> <p>001 – Include GPS latitude, longitude, velocity and heading in message.</p> <p>If Bit0 = 1 (binary), GPS data is added to the message in the following sequence:</p> <p>Latitude = 3 bytes. For example, if \$GPRMC latitude is 3259.815430,N, then the three bytes would be 31BDA7 (3259815).</p> <p>Longitude = 4 bytes. For example, if \$GPRMC longitude is 09642.854492,W, then the four bytes would be FF6CDC9A (-9642854).</p> <p>Velocity = 2 bytes in tenths of knots. For example, if \$GPRMC velocity is 21.1 knots, then the two bytes would be 00D3 (211).</p> <p>Heading = 2 bytes in tenths of degrees. For example, if \$GPRMC heading is 357.9 degrees, then the two bytes would be 0DF8 (3579).</p>

Bit-Field Table 2 - (1,0)	
Parm2	Description
	<p>If Bit0 = 0 (ASCII), GPS data is formatted as described above, then converted to ASCII HEX (effectively doubling the number of bytes required to contain the information) before being inserted into the message. There are no spaces between the various GPS data fields.</p> <p>010 – If Bit0 = 0 (ASCII), include \$GPRMC sentence in message. If Bit0 = 1 (binary), include GPS date, latitude, longitude, velocity, heading and time in message in the following sequence:</p> <p>Date = 3 bytes. For example, if \$GPRMC date is 290611, then the three bytes would be 046F33 (290611).</p> <p>Latitude = 3 bytes.
